KENT EDUCATION COMMITTEE.—A meeting of the Kent Education Committee last week accepted the report of the Stores Sub-Committee, whose incursions into the realm of stationery and printing have lately been under the watchful eye of the printing trade. In moving the report, Mr. C. H. B. Marsham said that Press representatives had suggested that the sub-committee might issue a balance sheet or a comparative statement. If that statement was going to be a genuine one, it would mean publishing the prices which the manufacturers offered—a practice which any business man would realise was not playing cricket. They could not give these prices away because they were treated as confidential. The committee would, however, try to do what they could in the matter of a balance sheet without prejudicing the committee's purchasing power.

THE weekly trade report of the Leicester Chamber of Commerce states that the paper box trade is dependent upon the staple industries for its business, and the requirements of the boot and shoe manufacturers are very small at present. Orders from hosiery manufacturers and spinners are fairly good.

THE same authority reports that the general business in the printing trade is still maintained fairly well, although the improvement has not been anything like what was anticipated. The alteration in the postal rates has had some effect, but in the letterpress and binding sections the quantity of work is not forthcoming, and short time is being worked in some instances. The lithographic section is still by far the busiest, but even here in some instances the volume is far from normal.

AT Lancaster Assizes on Monday, after a three days' trial, sentence of 15 months' hard labour was passed on John Carnaby Marshall, aged 40, foreman fitter, and John Paxton, aged 38, fitter, lately employed by Messrs. Vickers at Barrow. They forged

Treasury notes in a secret room, Paxton bragging that he could make £20 per day.

THERE were two cases of lead poisoning in the printing industry during September.

THREE fatal accidents were reported in the paper, printing, etc., group of trades during September.

MEMBERS of the *Newcastle Chronicle* staff on Saturday evening held a whist drive and dance in Jesmond Dene Banqueting Hall.

THE *Hertfordshire Mercury* has just attained its third jubilee, which it celebrates by a special supplement. Amongst prominent people sending congratulations upon the newspaper's 150th birthday is the Earl of Balfour, who writes: "There are not many newspapers in the world that can claim a longer pedigree."

"STAR'S" LIBEL DAMAGES.—Damages of £600—£100 each—were awarded to the six brothers Lotinga, known professionally as "The Six Brothers Luck," who claimed damages for alleged libel from the *Daily News*, Ltd., before Mr. Justice Darling and a special jury on Thursday last. The libel complained of, which appeared in the *Star* newspaper, had the heading, "Arrest of Two Comedians," and the men were described as two of the Six Brothers Luck. It was stated for the brothers that the two men in question were not members of the Six Brothers Luck.

"YORKSHIRE POST" SPORTS GROUND.—The *Yorkshire Post* proprietors have recently acquired a fine estate, covering several acres, at Headingley, Leeds, for the use of the employees of the *Yorkshire Post* and associated newspapers as a sports ground. Over 300 members of the staffs have already been enrolled as members of the sports club. The entertainments section of the club held their inaugural function on Saturday evening at the Hotel Metropole, Leeds, when a whist drive and dance was attended by representatives of all departments.

By a change just made, *Notes and Queries* will now be printed and published at 20, High-street, High Wycombe, Bucks, whilst letters for the editor should be sent to the London office, 22, Essex-street, Strand, W.C.2.

BAXTER PRINTS EXHIBITED.—A collection of Baxter coloured prints, lent to Sunderland Art Gallery by Mr. J. R. Hall, of Newcastle, was opened by the Mayor of Sunderland (Councillor W. Raine) on Friday. The collection, almost complete, is said to be one of the most valuable in existence, and consists of 360 of the 380 prints issued by Baxter. Pictures, portraits, reproductions of famous masterpieces, and prints of the great London Exhibition held in 1851-54 are included.

MR. C. E. RATCLIFFE, at one time a well-known journalist in Manchester, died last week.

THE death has occurred in London of Mr. Henry F. Moore, who for more than 30 years had been the agricultural correspondent of the *Newcastle Daily Chronicle*.

LATEST WILLS.—Mr. Irwin Edward Bainbridge Cox, D.L., J.P. (84, of Mill Hill, until recently principal proprietor of the *Law Times*, the *Field* and the *Queen*), gross £80,777, net personalty £7,263; Mr. George Robert Sims, of Regent's Park, who as "Dagonet" contributed the page "Mustard and Cress" to every issue of the *Referee* since its foundation in 1877, formerly on the staff of *Fun* and the *Weekly Dispatch*, £7,111, net personalty £3,358; Mr. John W. Peacock, of Bath, and Upper Bedford-place, W.C., journalist, £7,986; Mr. William C. Beaumont, of Palgrave, Suffolk, journalist, for 27 years managing director of the *Statesman* newspaper in India, £26,753.

THE late Mr. Rey Vernon Somerville, of *Punch*, left £23,251. By his will he bequeathed £1,000 to "my invaluable secretary at *Punch* office" (Marion Jean Lyon).

THE award for supplies of paper required by the Financial Department of the Argentine Republic has been made to Messrs. Willgo, of Brussels. Tenders were also made by Dutch, French, Spanish, English, Argentine and American firms.

FEELING runs high in Persia regarding an attempt to rush a Press Bill through Parliament in consequence of articles in the Press against certain religious observances. The attempt was defeated, a motion for a full discussion of the new Bill being carried.

MR. MARMADUKE PICKTHALL, editor, printer and publisher of the *Bombay Chronicle*, has been convicted of contempt of court for an

article in his paper on April 24th, 1922, alleged to attribute improper motives and political bias to Indian judges in connection with cases arising out of the Khalifate movement. He was fined 200 rupees.

MR. J. TIGHE RYAN, well-known Australian journalist, has died in Sydney. He was editor of the *Sydney Catholic Press* from its foundation in 1897 until his death.

THE All-Russian Central Executive Committee has given orders for the publication by the State Publishers of Lenin's complete literary works (says the *Times* Riga correspondent), the edition to fill nineteen volumes of over four hundred pages each.

FASCISTI have attacked the offices at Rome of Signor Nitti's two papers, the *Paese* and the *Epoca*.

IN Germany printers have raised their rate of prices by about 60 per cent. since September 18th, and it is not known when the continual increase is going to stop. If this situation continues it will become unbearable for the industry and commerce also.

AUSTRIAN newspapers' difficulties are illustrated by the fact that the daily *Deutsches Volksblatt*, a paper partly Pan-German, partly Christian Socialist, cannot continue its appearance owing to financial difficulties. Other breakdowns are foreshadowed.

Trade Union Matters.

LONDON UNIONS AND WAGES.—The London unions with which the wages question has not yet been settled are, as indicated last week, proceeding to take the opinion of their members on proposals of wage reduction. The ballot of the Amalgamated Typefounders' Trade Society has resulted in a majority in favour of the wage-reduction proposals. The London Society of Compositors held their delegate meeting on Wednesday of last week, and considered their committee's recommendations, which were finally accepted, though under protest. It was accordingly arranged to carry out a ballot of the membership. The result of the ballot is not yet made known as we go to press. The subject is also under consideration by the other London unions and their decisions are also awaited.

THIS WEEK'S WAGES REDUCTION.—The third reduction in wages of 3s. to members of the Typographical Association under the terms of the recent settlement comes into force this week. The wages of linotype operators will, on the reduction, range from £3 14s. 6d. for operators on day work in Grade 6 towns to £5 2s. 6d. for operators on night work in Grade 1; and those of case compositors will range from £3 6s. for jobbing men on day work in Grade 6 to £4 17s. 6d. for news compositors on night work in Grade 1. Machine minders' wages will range from £3 6s. for Class I. in Grade 6 to £4 18s. for rotary machine minders in Grade 1.

WE learn from the Employers' Federation of Envelope Makers and Manufacturing Stationers that further readjustments in the wages of the workers in this industry come into operation on the pay day in the present week. The wages of adult males are reduced by 2s. 6d. a week and of skilled women workers by 1s. 6d. The learners' schedules have been revised and are now in the hands both of the employers and the trade union officials.

A CONFERENCE was arranged between the London Master Printers' Association and the London rulers' and binders' section of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers to take place yesterday (Wednesday) to consider the vexed question of the demarcation between male and female labour in ruling and binding establishments.

Samples Post Anomaly.

How British Trade is Handicapped.

For an example of the manner in which our postal authorities assist foreign manufacturers to the injury of British industry, nothing is more striking than the discrimination made in regard to the samples post. The position is really extraordinary. Indeed, it is difficult to realise that such an enormity actually exists. Yet the simple facts are set forth in the Post Office Guide itself.

This is the way the sender of samples in this country is treated: "Samples cannot be sent by Inland Post at any rates other than the letter and parcel rates." That is to say, the British manufacturer or the British merchant or any resident in these islands who may wish to make use of the postal facilities for developing trade in this country has to pay 1½d. for a package not exceeding 1 ounce in weight, 2d. from 1 oz. to 3 oz. and ¼d. for every additional 1 oz. or fraction of 1 oz.

Now just let us see how the British Post Office treats foreign samples. "The pre-paid rate of postage on sample packets for all places abroad is 1d for the first 4 ozs. and ¾d. per 2 ozs. thereafter." So you can send samples thousands of miles across the seas at this lower rate; but when it comes to forwarding them by post across the street, then you may send less and it will cost you half as much again.

No wonder our commercial men are irate at the rule of the permanent officials who dictate the policy to the Government of the day. It is preferential treatment of the foreigner to the detriment of producer and consumer at home.

British trading has for too long been subject to irritating hindrances, and it is just such anomalies as that of the samples post that prevent our industries from getting their due benefit out of the splendid market which is represented by the United Kingdom.

There are many directions in which the Postal authorities can help to place British traders on terms of more equality with their foreign rivals; and this point of the samples post is one of them. Hitherto protests have been of no avail, although in our columns and the Press generally examples have been quoted to illustrate the absurdity of the ruling samples rates. We are glad to learn that the Federation of Master Printers and the Employers Federation of Envelope Makers and Manufacturing Stationers are taking the matter up and bringing pressure to bear in the proper quarter. While these two organisations are directly concerned by the embargo upon postage which the samples rates enforce, every manufacturer or trader who desires to send samples through the post is also affected. It is a pity that so much agitation and effort are required before the British taxpayer can obtain the facilities which should be his by right.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NEW ZEALAND.

A firm of agents resident in Auckland wish to obtain the representation of a United Kingdom manufacturer of wall-paper, the agency to be conducted on an indent basis. (Reference No. 375.)

BRAZIL.

A recently established commission agent in Rio de Janeiro desires to secure the representation of United Kingdom manufacturers of stationery, on a commission basis only. (Reference No. 396.)

MEXICO.

A British merchant firm in intimate touch with the Mexican market is desirous of securing the sole representation for Mexico for a United Kingdom manufacturer of fountain pens, pencils, writing tablets and stationers' sundries in general. (Reference No. 400.)

SOUTH AFRICA.

Stationery.—A manufacturers' agent established in Johannesburg is desirous of securing the representation of a United Kingdom manufacturer of stationery, including writing paper. He has already had considerable experience in handling these lines. (Reference No. 415.)

Postal Rates for Diaries.

SIR,—In reference to the Postmaster-General's notice that no kind of diary is admissible at the Inland Printed Paper Rate, we have already taken steps to protest against this decision, as it appears to us to be entirely contrary to the conditions published in the "Post Office Guide" in regard to what may or may not be carried under the Printed Paper Rate.

The "Post Office Guide" lays down that the expression "Printed Paper" means a packet not exceeding 2 lbs. in weight which consists of or contains amongst other items, books and other publications or works of a "literary character." It is obvious that the contention will turn upon what is or what is not a book of a "literary character."

The word "literary" is derived from the Latin word "literarius," and means appertaining to letters or learning. Many diaries are largely of a literary character; as an example we would quote our new publication, "The Country Life Diary." This diary is written by Mr. Richard Morse, a well-known naturalist and writer on matters appertaining to natural history. A very large section of the diary is devoted to nature notes and phenological observations, and it certainly is, in our opinion, a work of literary character. Then again, take such diaries as "The School-Boy's Diary" and "The School-Girl's Diary"; a large section of these diaries deals exclusively with matters appertaining to letters and learning. Surely these again are works of literary character. Indeed, we very definitely hold the opinion that there are very few diaries published which in general terms may not be termed "works of a literary character," and under these circumstances we hold the opinion that the notice issued by the Postmaster-General is in direct contradiction to the regulations as laid down by the official "Post Office Guide."

We are already in communication with the Postmaster-General on the subject, and understand that the Diary Publishers' Association are sending a deputation to lay their views before the Postmaster-General, and we think it will be better that an association representing all the leading diary publishers should deal with this matter.

Yours, etc.,
CHARLES LETTS AND CO.

The Election and Postal Rates.

SIR,—The high postal charges were, prior to May 29th, 1922:—

Letter, 2d.
Post card, 1½d.
1 oz. of printed matter, 1d.

They are now:—

Letter, 1½d.
Post card, 1d.
1 oz. of printed matter, ¾d.

The pre-war rates were:—

Letter, 1d.
Post card, ¾d.
2 ozs. of printed matter, ¾d.

It is the pre-war rate which is now required.

The wisdom of reducing postal charges to the present rates by Mr. Kellaway is manifested by the revenue returns from April 1st to September 3rd, 1922, which shows an increase in postal revenue of £4,050,000 over the corresponding period of 1921. Other manifestations of the correctness of the policy lie in the resultant increase of business in trade and commerce generally, and in the vast printing industry in particular, whilst a decrease in the ranks of the unemployed is in evidence.

A promise was given by Mr. Kellaway that further reductions would be made if increased postal revenue and economies at the Post Office justified it. The justification is already apparent. The promise made by the Postmaster-General must not be forgotten by the electors, no matter who the new Postmaster-General may be. A suitable inquiry, such as the following, should be put to all candidates seeking election: "In view of there still being much unemployment, will the candidate, if returned, undertake to move, or, failing that, undertake to support a resolution asking the Government to reinstate the pre-war rates of postage?"

There are many other reductions and improvements required in the postal service, but

those quoted are the most important, and are sufficient to go on with at present.

Yours, etc.,

W. H. BURCHELL.

Governing Director, the Caxton Press, Ltd., Hon. Organising Secretary, the Association of Master Printers of the London Central Districts.

13 and 15, Leather-lane, E.C.1.,
October 28th, 1922.

Bronzing and Printers' Health.

Recommendations of the J.I.C.

A folder issued by the Health Committee of the Joint Industrial Council of the Printing and Allied Trades is headed "Bronzing in Letterpress and Lithographic Printing—How to Minimise Danger to Health." It reads as follows:

"The Health Committee of the Joint Industrial Council have had under consideration the question of bronzing with dry metallic powders in letterpress and lithographic printing. They are of opinion that, at the present time, the abolition of bronzing is not a practical proposition, however desirable such a course may be theoretically.

"From the information available, bronze dust appears to be dangerous to health in so far as it makes the workers very susceptible to diseases of the respiratory organs, such as pneumonia and pleurisy. It is also undoubtedly a source of great discomfort to them.

"There are various methods employed to prevent the dust from getting into the atmosphere of the work room and also Government regulations in force for the purpose of reducing to a minimum the discomfort and danger arising therefrom. Unfortunately, full advantage is not always taken of the mechanical means available, and it has been asserted that, in too many cases the workers, as well as the employers, are lax in carrying out the Government regulations. The Committee are of opinion that, if full advantage were taken of the preventive means suggested, there would be no need for further action.

"With this object in view, they call special attention to the following methods of preventing, as far as possible, bronze dust from getting into the atmosphere and also to the Government regulations, of which a summary is appended.

Bronzing Machines.

"There are several bronzing machines on the market made by well-known makers. These are essential in works where a large amount of bronzing is regularly done. They should be connected up with an exhaust ventilator so that escaping particles of dust can be removed.

"For small work, vacuum hand bronzers, either fixed or portable, are obtainable, and for casual work, a bronzing cabinet is made at a low price.

"In the interests of health and efficiency, employers are strongly recommended to overhaul their plants at once."

Government Regulations.

The folder proceeds to quote from the Statutory Rules and Orders, 1912, No. 361, dated April 11th, 1912. The passages cited define the duties of occupiers in respect of providing efficient exhaust draught or other means of preventing the escape of dust into the air, and of providing facilities for maintaining cleanliness of person and clothing; they define also the duties of persons employed, in respect of washing, care of clothing, use of foods and drinks, etc.

Copies of the complete Rules may be obtained through any bookseller, price 1d.

At the sittings in bankruptcy, in the Chancery Division, Mr. Justice Astbury heard an application on behalf of the judgment creditor for an order against the debtor, Mr. Randal Charlton, journalist, in respect of arrears of alimony amounting to £95 10s. He explained that an order *pendente lite* was made in March last for payment by Mr. Charlton to his wife, against whom he was taking divorce proceedings, of £125 per annum. Nothing had been paid. Mr. Justice Astbury said he would allow the matter to stand over till November 27th, and direct the debtor to pay £10 towards the arrears in a fortnight.

THURSDAY, NOVEMBER 2, 1922.

Postmasters and Postal Rates.

THE printing trade does not usually take particular interest in the fact that a Postmaster-General relinquishes his position. In the case of Mr. F. G. Kellaway, however, we think our industry must regard his passing from office with some regret and apprehension. Mr. Kellaway, though hard to convert to the realisation of the necessity for cheaper postage, eventually showed himself fully alive to the needs of the business community and to the big possibilities for good which his position gave him, and he deserves much credit for effectively carrying through the postal concessions which the public has already gained. We note that, in his farewell letter to his G.P.O. staff, he claims that his department "has not been hidebound by tradition, nor has it shown that fear of giving way to just criticism, which is said to be one of the vices of Government departments." That is a fair claim, and the printing trade thanks Mr. Kellaway that its "just criticism" was eventually given the consideration it deserved. The letter proceeds: "During my term of office the first step has been taken, and it is a long one, towards the restoration of the cheap and efficient postal facilities which the country enjoyed before the war. I had hoped that that great work might be completed during my Postmaster-Generalship. I am sure it cannot now be long delayed, and in what has already been accomplished the Post Office staffs have shown a growing sense of the fact that it is successful in as far as, and only in as far as, it responds to the essential needs of the social and business life of the country." That is an admirable confession of faith: a quick return to pre-war postal rates, and a realisation of the vital business importance of a good and cheap postal service—these are the essential aims of a valid orthodoxy in a good Postmaster-General. Mr. Kellaway's successor in office, now announced to be Mr. Neville Chamberlain, will be expected to live up to the standard thus established, and to make rapid strides in the movement already started towards greater postal efficiency.

Direct Trading in Paper.

IT is high time that the question of direct trading came up before the tribunal for final settlement. Every week that goes by brings fresh evidence of the extent to which this practice is growing. Even the most reputable merchants are known to be accepting and fulfilling orders for the printer's customer. The rapid progress which has been made during the last few years in multi-duplicating and automatic printing machinery for office and warehouse use complicates the problem of direct selling. Of course, some of the firms which sell the machines are endeavouring to merchant the paper, a new feature which is in the nature of a challenge to the legitimate paper merchant. Still it must be observed that even these people secure their papers from maker or merchant. If the merchant takes up direct trading in self defence against the dealer, he should at least remember that he is handling a two-edged weapon, for printers are feeling very sore over the matter; and if their grievances grow sufficiently to demand a remedy, they have one at hand which would not work out to the advantage of the wholesaler concerned.

Proprietary Papers.

MUCH of the same nature as the foregoing is the dissatisfaction expressed in some wholesale stationery circles over the matter of proprietary papers. Inevitably, an interesting situation arises when some big wholesale concern takes over a mill which earlier in its career has catered to the requirements of a number of paper merchants. It is open to the new proprietors to decide whether they will or will not continue to make for the one-time customers, and meantime they may possibly enter into possession of the dandies or moulds. It is unlikely that they would cater on the best terms to their competitors and rivals. In these days of fusion, merging, amalgamation and purchase there must be a multitude of minor propositions of this sort to be got over.

Discounts and Rebates.

THERE is some room for a closer approximation to some standard in the matter of discounts in the paper trade. Some merchants allow 5 per cent. settlement and some make their terms nett or 2½ per cent. Others have inaugurated a system of rebates, while others again allow a preferential invoice discount of 8 per cent. and 2½ per cent. settlement. The mills mainly work on strictly nett terms and allow one month where merchants offer one to three months. It is quite understood, of course, that where discount is given it is allowed for in fixing selling prices, and in the end there is probably nothing to choose between one nett price and another. Mill nett terms are certainly rockbottom, and well below anything that merchants can do. But there is a point of view which means a great deal to the printer. The invoice price is that at which he costs out his paper, and any discount from that is clear gain which goes into his pocket. If it is already discounted, the concession is automatically given away to the customer. That is the chief argument for a settlement discount.

The First Kentish Papermaker.

PRAISEWORTHY efforts are being made to preserve the tomb, in Dartford Parish Church, of Sir John Spielman, who was the first to make paper in Kent. The tomb is being restored, under the direction of the Dartford Parochial Church Council, by Mr. Tristram, the artist under whose direction the colours on the old tombs in Westminster Abbey have recently been so successfully restored. The Papermakers' Association has appropriately made a contribution of five guineas towards the cost of the work and the Original Society of Papermakers, who have previously kept a jealous eye on the monument, are also contributing.

Death of Mr. H. C. Hill.

A Prominent London Plaster Printer.

The sudden death of Mr. Herbert Charles Hill, managing director of Messrs. Hill, Siffken and Co., Ltd., of Grafton Works, London, N., comes as a shock not only to the firm of which he was the leading figure, but to the whole of the printing industry. Though he had been suffering for some time from partial paralysis, the end was quite unexpected, a chill caught on Friday last being followed by the startling news on Wednesday that he had passed away in the early hours of that day.

Many indications of the respect and affection with which Mr. Hill was regarded were forthcoming at the funeral, which took place on Saturday. A service was held at St. Luke's Church, Hillmarton-road, there being a very large attendance, and the interment followed at Hampstead Cemetery. Amongst those present was a large representation of em-

Mr. Herbert C. Hill.

ployees of the firm of Hill, Siffken and Co., Ltd., many of whom were evidently deeply affected by the occasion. Mr. A. E. Goodwin, secretary of the Federation of Master Printers, attended on behalf of the Federation, and Mr. W. Whyte, secretary of the London Master Printers' Association, represented the L.M.P.A. whilst Mr. W. J. Mizen was present for the North London Master Printers' Association. Several carriages were required to bear the numerous floral tributes received, which included wreaths sent by the London Master Printers' Association and the North London Master Printers' Association.

Born in 1860 and trained as a practical printer, Mr. Hill devoted himself particularly to the lithographic branch of the trade, specialising in poster production. He was not only the founder and moving spirit of the firm of Hill, Siffken and Co., but he put all printerdom in his debt by his work as a pioneer of poster printing, as also by his services to his fellow master printers.

Poster advertising of 30 years ago was a very dull affair compared with what we know of it to-day, and to Mr. Hill and his firm is due a large share of the credit for the foresight and enterprise that have given us our present-day pictorial posters. One of Mr. Hill's ambitions was the attainment of poster perfection, and with his gaze turned towards that end he thought no drawing too good for the hoardings nor the fees of the greatest artists too high if their pictures would appreciably help towards making British posters the best in the world. The success that attended his efforts is indicated by the high esteem in which Hill-Siffken posters are held, their popularity being not confined to this country but shared by many countries overseas. His lofty ideals and sound business ability ensured him the

respect and trust not only of his younger brother, Mr. Edward Hill, who chiefly shared with him the responsibilities of the practical side of the firm's activities, but also of all those who worked under his supervision. He was a man sincerely honoured by his work-people, his reputation in his own establishment being, we gather, that he was one who was always out to do the thing that was fair and kind, and therefore always willing to give thoughtful and generous consideration to the case of any employee who fancied he had a grievance or who might find himself in trouble.

His reasonableness and breadth of view in respect of industrial relationships made him active in attending to the welfare of his employees, and made him also a tower of strength to the master printers' organisations, his services being much prized both by the London Master Printers' Association and the Federation. Reference to the Master Printers' Annual indicates the value which both organisations set upon his qualities as spokesman and negotiator. He was deputy-chairman of the London Master Printers' Association during 1918-21, president of the North London Master Printers' Association 1917-18, chairman of the Colour Lithographers' Committee of the L.M.P.A., member of various other L.M.P.A. committees, representative of the L.M.P.A. on the Council of the Federation of Master Printers, and representative of the Federation on the Executive Council of the Federation of British Industries. During the war he served on the Paper Control Advisory Council and on the committee of the London Chamber of Commerce on Paper Restrictions.

Mr. Hill gave promise of many more years of useful activity, and his unexpected passing will be learned by the trade with feelings in which regret and a sense of loss will be mingled with high appreciation of his work for the general betterment of the craft.

Personal.

WHEN the Prince of Wales presided on Tuesday over the 109th festival dinner of the London Orphan School and the Royal British Orphan School, Watford, held at the Hotel Victoria, Lord Riddell, Sir Wm. Waterlow and Sir G. Rowland Blades were among the printing trade's representatives present.

THE members of the City Corporation are making to the Lady Mayoress (Lady Baddeley) a present of jewelry, which will be handed to her next Tuesday, at 3 p.m., on the occasion of her last reception at the Mansion House.

LORD LEVERHULME will open the new Samson Clark Building in London on November 6th. The occasion will be made a festival to celebrate the completion of the largest building in Great Britain solely devoted to advertising service and requirements.

THE Lord Chief Justice and the American Ambassador will be the chief guests at the annual dinner of the London District of the Institute of Journalists, to be held on Saturday, December 2nd, at the Hotel Cecil.

MR. C. T. JACOBI is to lecture on "Modern Printing and Book Production," at Stationers' Hall, on Tuesday next, November 7th, under the auspices of the Society of Bookmen.

THE Grand Council of the Federation of British Industries have unanimously nominated Sir Eric Geddes for the post of president of the Federation of British Industries during the coming year.

MR. WALTER S. SCOTT, who has retired from the editorial staff of *The Times*, was entertained at dinner at Prince's Restaurant on Saturday by his colleagues. Mr. Scott joined the staff of *The Times* in 1877, when Delane was editor, and has since served, principally in the foreign department at Printing House-square, under four other editors.

MR. WICKHAM STEED, the editor of *The Times*, presided, and proposed the health of the guest, referring to the wonderful variety and importance of the records of current events which had passed through his hands.

MR. HARRY J. GORDON, who nine years ago joined the reporting staff of the *Aberdeen Free*

Press, and for some time has been acting editor of the *Aberdeen Evening Gazette*, has been appointed to the editorial staff of the *Daily Dispatch*.

MR. W. R. DAVIDSON, formerly of the staff of the *Northern Scot*, and for some time past a member of the staff of the *Daily Dispatch* at Manchester, has been appointed to the news editorship of the *People*.

MR. CLAUDE RIPPON, who has been asked to take up the Mayoralty of Oxford next year, is the managing director of the *Oxford Times Co.*

MR. ERNEST OUTHWAITE, who for some time served on the *North-Eastern Daily Gazette* at Middlesbrough, and for some years was editor of the *Leeds Mercury* under the proprietorship of Lord Rothermere, will be a candidate for Parliamentary honours at North Paddington at the General Election.

MR. A. E. NEWBOULD, ex-M.P. for West Leyton, and Liberal candidate at the forthcoming election, was associated with Mr. T. P. O'Connor in several of his journalistic ventures, notably the *Sun* and *T.P.'s Weekly*.

MR. HAROLD SPENDER, the well-known journalist, has been adopted as Liberal candidate for Bath, where the two sections of Liberals have united to support him.

MR. GEORGE LANSBURY, late editor of the *Daily Herald*, has been officially adopted as Labour candidate for the Bow and Bromley Division.

MR. ALFRED J. BONWICK, who is contesting the Chippenham Division of Wilts in the Liberal interest, is well known in the printing and newspaper realms.

MR. ELLIOTT DOODS, journalist, is contesting York as a Liberal candidate.

MR. HARRY BECKER has been adopted as an anti-waste candidate for the Richmond Division at the forthcoming General Election. The *Westminster Gazette* describes him as "an energetic and independent-minded personality."

MR. T. COX MEECH, journalist, will probably be Independent Liberal candidate at Blackburn.

MR. G. LEWIS, described as a Conservative working man, connected with the printing trade in Birmingham, and a trade unionist, has been adopted to fight Mr. Jack Jones (Labour) in the Silvertown Division.

MR. M. P. PRICE, previously foreign correspondent for the *Manchester Guardian* and later for the *Daily Herald*, has been adopted as Labour candidate for Gloucester.

P.M. & O.A. Third Pension.

The Printers' Managers and Overseers' (Parent) Association held a very successful bohemian concert at Anderson's Hotel on Monday in aid of the fund to establish a third P.M. and O.A. pension within the Printers' Pension Corporation. Messrs. E. W. Whittle and W. Hermon Gill shared the office of chairman, amongst those supporting them being Messrs. T. E. Naylor, H. W. Howes, S. M. Bateman, R. H. Berry, G. H. T. Freeman, A. E. Jarvis, F. J. Connolly, C. H. Rogers and Sydney Cumbers. There was an excellent attendance, the hall being filled to overflowing.

A long musical programme was submitted by Mr. Eric Clifford's concert party, whose varied selection of songs, humorous items, etc., were once more highly enjoyed.

The financial outcome of the event was that Pension No. 3 was completed, the plate realising £103.

The two chairmen were very cordially congratulated on the success of the energetic efforts they had put forward, a vote of thanks moved by Mr. Freeman being enthusiastically supported.

Messrs. Whittle and Gill made suitable response to the vote of thanks, after which brief speeches were elicited from Messrs. Naylor, Howes, Bateman and Jarvis.

DIVIDENDS AND REPORTS.

LINOTYPE AND MACHINERY LIMITED.—At the annual meeting of the shareholders of Linotype and Machinery Limited, held at the offices, Kingsway, W.C., last week, Mr. Philip T. Dodge stated that the net profits were £109,000. Last year's profits were £132,000, the balance being £32,000, as compared with £52,000. This result was to be expected, as owing to the engineers' strike the works had to be closed for three months. With the depressed conditions in the printing trade, the result had satisfied the directors, and they considered they had been very fortunate in the year's trade. Since the men had returned after the engineers' strike output had been greater than before the war. They were increasing accommodation for the manufacture of machines, and were looking forward to great economies and developments in that department. The outlook for a successful year in 1923 was promising.

ASSOCIATED NEWSPAPERS, LTD. which owns the *Daily Mail*, *Evening News* and *Weekly Dispatch*, have authorised an interim dividend on the deferred shares for the quarter ending September 19th at the rate of 40 per cent., less tax. For the quarter ending June 30th the dividend was at the rate of 20 per cent., free of tax.

NEW COMPANIES.

HAMBLEDEN PROPERTIES.—Capital £100,000 in £1 shares; to acquire and turn to account any lands, buildings and hereditaments in the United Kingdom or elsewhere; to enter into two indentures of mortgage (1) with Lord Hambleden and (2) with the said Lord Hambleden, Alfred Dyke Acland, Charles H. St. John Hornby, Arnold Danvers Power and William H. Dyke Acland, trading at Strand House, Portugal-street, W.C., as W. H. Smith and Son; to carry on the business of financiers, bankers, capitalists, wholesale and retail booksellers, stationers, librarians, printers, fancy goods dealers, news and advertising agents, newspaper proprietors, traders in or manufacturers of paper, pulp, china, glass, machinery, motor cars and accessories, oil, timber and other substances or things, carriers and general agents, agents for railways and shipping companies, proprietors and managers of lands, buildings, shops, bookstalls, etc. Private unlimited company. Directors: Lord Hambleden, C. H. St. John Hornby, A. D. Power and W. H. Dyke Acland. Registered office: Strand House, Portugal-street, W.C.2.

ALEXANDER WATSON, LTD.—Capital £1,500 in £1 shares; to adopt an agreement with the executors of A. Watson, and to carry on the

business of envelope makers, relief stampers, printers, bookbinders, stationers, paper, cardboard and box makers, etc. Private company. Directors: C. E. Watson, A. A. Watson, T. Watson and G. W. Watson. Registered office: 13, Swan-lane, Upper Thames-street, E.C.4.

F. G. GREEN AND CO., LTD.—Capital £1,000 in £1 shares; to take over the business of a wholesale and export paper and envelope merchant carried on by F. G. Green, at Union Bank Chambers, Southwark-street, S.E., as F. G. Green and Co. Private company. First directors: F. G. Green and A. J. Green. Registered office: 16, Southwark-street, S.E.1.

GILCHRIST BROS., LTD. (Leeds).—Capital £8,000 in £1 shares; to acquire the business of photo process engravers carried on by C. W. Gilchrist at Queen's Place, Claypit-lane, Leeds, as "Gilchrist Bros." Private company. Subscribers: C. W. Gilchrist and H. Wright.

WILLIAM HEINEMANN, LTD.—Capital £80,000 in £1 shares (55,000 6 per cent. cumulative participating preference); publishers, as formerly carried on by F. N. Doubleday and S. S. Pauling, as "William Heinemann," at 20 and 21, Bedford street, Covent Garden, W.C. Private company. First directors: F. N. Doubleday, S. S. Pauling, T. Byard and C. S. Evans. Registered office: 21, Bedford-street, Strand, W.C.2.

SCHOOL OUTFITTING ASSOCIATION, LTD.—Capital £1,000, in £1 shares; school outfitters, booksellers, stationers, etc. Private company. Subscribers: F. A. Cawson and W. C. Webster. Subscribers appoint directors. Registered office: 23, High-street, Chorlton-on-Medlock.

RUSSELL CHAPMAN, LTD.—Capital £1,000, in 700 7 per cent. cumulative preference shares of £1 each and 1,200 ordinary shares of 5s.; publicity organisers and advertising agents, etc. Private company. First directors: G. Russell Chapman, F. P. Bishop and E. H. Palmer. Registered office: 22A, Regent-street, W.1.

MIDLAND PRESS EXCHANGE, LTD.—Capital £100, in £1 shares; advertising agents and publishers, etc. Private company. First directors: L. A. Cuthbertson and May C. M. Grafton. Registered office: 40, Guildhall Buildings, Navigation street, Birmingham.

STAUNTONS (LONDON), LTD.—Capital £5,000, in £1 shares; manufacturers of and dealers in wall and ceiling papers and coverings, blinds, and other articles, colours, varnishes, dyes, pigments, etc. Private company. Subscribers: E. J. Aildis and J. Bennett. First directors appointed by subscribers. Registered office: British Columbia House, 1-3, Regent-street, S.W.

APEM, LTD.—Capital £100, in £1 shares (50 preference and 50 ordinary); manufacturers, exporters and importers of and dealers in photographic cameras, papers, mounts and frames, etc. Private company. Subscribers: W. Piper and H. H. Law. Subscribers appoint directors. Registered office: 3, Soho-square, W.1.

SHIMWELL AND BROTHER, LTD.—Capital £70,000, in £1 shares (30,000 preferred 30.00 preferred ordinary and 10,000 deferred ordinary); to acquire the business of a shipping merchant carried on by W. Shimwell at Manchester and elsewhere as Shimwell and Brother, to adopt agreements with W. Shimwell, H. Shimwell, O. Shimwell and H. Dunn, and to carry on the same and the business of home trade merchants, exporters and importers of and dealers in fabrics and raw and manufactured materials and substances, manufacturers of and dealers in textile fabrics, paper, stationery, fancy goods, chemicals, machinery, timber, etc. Private company. First directors: W. A. Bolton, K. D. Stewart, A. McCrea, W. Shimwell and H. Dunn. Registered office: 32, Bloom-street, Manchester.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

YELF BROTHERS, LTD. (printers and stationers, etc., Newport, I.W.).—Satisfaction to the extent of £150, on October 14th, 1922, of debentures dated May 13th, 1915, securing £600.

VITTY AND SEABORNE, LTD. (engravers, etc.).—Land Registry Charge on 3, Crane-court, Fleet street, E.C., dated October 7th, 1922, securing £2,000, being the amount secured by mortgage dated November 30th, 1920, to the late Mrs. A. S. Macaulay. Holder: A. L. Irvine, Lord's Meade, Godalming.

IRVINES, LTD. (office supplies, etc., London).—Issue on October 18th, 1922, of £100 debentures, part of a series already registered.

BANKRUPTCIES, etc.

Re HORACE STANLEY PAGE-HENDERSON, stationers' agent, 22, Pandora-road, West Hampstead.—An application was made on October 24th to Mr. Registrar Mellor at the London Bankruptcy Court for an order of discharge on behalf of this bankrupt who failed last June. Mr. Walter Boyle, official receiver, reported that the provable debts amounted to £1,582, and the assets had realised £40, which was insufficient to pay preferential claims and the expense of the bankruptcy. From January to May, 1899, the bankrupt and a partner traded as "The Alert Printing Co.," which was merely an introducing business, working on commission. The partner absconded, leaving the bankrupt with liabilities of £800 which he discharged. Between May, 1899, and March, 1916, the applicant was engaged in obtaining orders on commission for printing and stationery for a well-known firm of stationers. He then served in the army, but resumed with the same firm in September, 1917. As the earnings were insufficient he resorted to money lenders and his present indebtedness largely consisted of interest charged at heavy rates. The bankrupt attributed his failure to trade depression which caused his commission

earnings to fall short of requirements for living expenses and to heavy interest charges. As offences the official receiver reported (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) contracting a debt without reasonable or probable ground of expectation of being able to pay it; and (3) unjustifiable extravagance in living. His Honour upheld the report and suspended the discharge for three years.

RE W. H. BOWYER, LTD., publishers, St. Mary's chambers, 161A-166, Strand, W.C.—The statutory meetings of the creditors and shareholders of this company were held on October 11th at the Board of Trade Offices, Carey-street, W.C. The compulsory winding-up order was made last May on the petition of John Dickinson and Co., Ltd., wholesale stationers, Old Bailey. The official receiver reported that the company was formed in July, 1920, with a nominal capital of £3,000, in £1 shares, to carry on business as publishers of picture post cards, cigarette picture cards and show card advertisements. The issued capital was £1,500. The first directors were Messrs. W. H. Bowyer, Alfred Grout and F. G. Watson, the two last-named gentlemen being directors of the Grout Engraving Co. which was associated with this company. They resigned on October 8th, 1920, and two employees of the Grout Engraving Co. were appointed in their place. The trading accounts showed a gross profit of £2,065, which, however, was exceeded by the expenses of carrying on the business, from the inception of the company to April 19th, 1922, when a receiver was appointed on behalf of the debenture holders. On April 19th, 1922, Mr. M. H. Moody, I.A., 20, Newgate-street, E.C., was appointed receiver on behalf of the debenture holders; he had realised most of the assets and had paid 15s. in the £ on the amount of the bonds, and now had a balance of £77 in hand. It was further expected that £50 would be recovered from the book debts. The liquidation was left in the hands of the official receiver.

RE CECIL KENNETH HEYWOOD, paper merchant.—A sitting of the London Bankruptcy Court was held on October 24th, before Mr. Registrar Francke, for the public examination of this debtor, manufacturer of fancy paper goods, 7, Caledonian-road, N., who failed last May, with total liabilities £20,988 (unsecured £14,263) and assets valued at £2,217, after deducting £289 for payment of the preferential claims. In reply to Mr. F. T. Garton, official receiver, the debtor stated that from 1901 until 1917 he was in employment principally in the paper and allied trades, but in December of the latter year he commenced business on his own account as a paper merchant at 24-25, Avenue-Chambers, Southampton-row, W.C., under the style of "Cecil K. Heywood." That business was fairly successful up to shortly after the Armistice, when it declined in consequence of the slump in trade. In April, 1920, witness removed to 7, Caledonian-road, and commenced in addition to manufacture fancy paper goods; the venture was never successful owing principally to lack of capital and bad trade. Throughout the whole of the trading he had been financed by Mr. Charles Baker, who, in consideration of the advances, had received a percentage of the profits. Witness attributed his insolvency to lack of capital and general trade depression. He had kept a complete set of books, and had prepared profit and loss accounts and balance sheets every six months. It was the fact that he had been insolvent practically from the commencement, because he was always under a liability to Mr. Baker, but the whole of the liabilities were incurred with that gentleman's knowledge of the position. On October 3rd, 1917, witness gave Mr. Baker a charge over the good will of the business and agreed to pay him 5 per cent. interest on the advances and 50 per cent. of the profits. Further advances were made between 1917 and 1921, and on April 30th of the latter year, a second agreement was executed under which the share of Mr. Baker's profits was reduced to 25 per cent. A relative of Mr. Baker also made him large advances and received a mortgage on the Caledonian-road premises, plant and fittings. The debtor admitted that since January 1st, 1921, his household and personal expenditure had been at the rate of £20 a week. The official receiver: Do you think you were justified in living at that rate when you were insolvent? Debtor: No. In reply to Mr. Crossingham, a creditor, the debtor said he never regarded the position as absolutely hopeless, otherwise he would have pulled up before. The examination was concluded.

Paper Mill Secretary's Dismissal.

Appeal Dismissed.

The Court of Appeal, consisting of the Master of the Rolls, and Lords Justices Warrington and Younger, last week dismissed an appeal by Olive and Partington, Ltd., papermakers, of Glossop and Manchester, from a judgment of Mr. Justice Roche in an action for alleged wrongful dismissal brought by Mr. Jos. Walton, lately secretary of the company.

Mr. Wingate Saul, K.C., for the company, said the only point was whether Mr. Walton was dismissed by the company or had resigned. He was appointed secretary of the company on its formation by resolution of the directors. He also did some cashier's work though there was a cashier. During the war his salary was increased from £600 to £850 a year. Last year Lord Doverdale, returning to active chairmanship of the company after illness, came to the conclusion that there must be a substantial reduction in the expenses of the company. On his instructions a letter was written telling Mr. Walton that his salary was to be reduced to £350. Mr. Walton demurred and was informed that no more would be given and that if he were not satisfied he had better retire. Mr. Walton wrote on August 24th that rather than accept the reduction he would resign and gave three months' notice. On September 12th Lord Doverdale wrote telling Mr. Walton that the company could "well spare his services as cashier," and instructing him instead of going to the works to go next day to the Manchester office "to see if we can find you a post as salesman or traveller if you care to remain in our services." Mr. Walton took that letter as a dismissal and the judge held that he was justified in that.

The Master of the Rolls: I am not surprised. Mr. Wingate Saul argued that it was not a dismissal from the post of secretary but only relieved him of his duties as cashier. There was no question as to damages. Subject to the question of liability these had been agreed at £212 10s. But the submission of the company was that Mr. Walton had not been dismissed but had "dismissed himself." The appeal was dismissed, the Master of the Rolls remarking that he agreed with the judgment of Mr. Justice Roche.

Catalogue Printing Lawsuit.

The question whether a quantity of catalogues printed to the order of Babyfair, bassinette makers, of 67, Renshaw-street, Liverpool, were of the quality contracted for, occupied the attention of his Honour, Judge Thomas, at the Liverpool County Court, last week. The plaintiffs were Messrs. Garfield, Whitney and Co., Ltd., printers and stationers, of 1, Hackins Hey, and they sued the firm of Babyfair for £20 odd, the price of the catalogues.

Considerable evidence was called on each side, including the testimony of experts from leading Liverpool printing establishments as to the character of the work represented in the catalogues and as to the possibility of obtaining the same results on dull biscuit-coloured paper as on paper of a different kind.

His Honour said he had come to the conclusion that although perhaps the catalogues might not have been useful to the defendants in connection with the advertising of the particular goods in which they deal, nevertheless they were not without some commercial value, and under the circumstances there would be judgment for the plaintiffs for ten guineas, and costs.

MESSRS. MARTIN AND CLARKE, The Paper House, Joiners' Hall Buildings, Upper Thames-street, E.C.4, send us a copy of their November stock and price list, which is nicely printed on a new line of buff card index board. The same quality can also be supplied in blue, and we notice there is quite a large quantity available for immediate delivery. The copying papers receive an addition in the form of a yellow tint. This firm's list still retains the shape of an insurance policy covering a number of attractive lines which are proving useful to the trade. A copy can be obtained for the asking.

Publications Received.

BASKERVILLE OLD FACE.—It is a pleasure to receive from Messrs. Stephenson, Blake and Co., Ltd., a copy of a new type specimen brochure devoted to the beautiful Baskerville Old Face family. The strength, weight and withal the gracefulness inherent in this superb face are skilfully exhibited by means of an interesting and suggestive series of examples of display work, including such items as the handbill, the magazine page, the book title page, the menu and the concert programme. A notable member of the Baskerville family here shown is the Titing Old Face Open, now being produced by this famous house; it is a most pleasing variant for use where a light and delicate touch is required. Note-worthy also is the revival of some interesting and effective old borders and cuts, which are in perfect keeping with the Old Face atmosphere. In bestowing unstinted praise upon this booklet—which by the way is exquisitely printed—one may be allowed a word of protest against the employment, in a single instance, of one of those "ornamental" initials, caged deep within a widespread border so that the initial itself is out of all alignment with the line to which it belongs. That, however, is the only word of criticism we have for a piece of printing which, apart from its immediate commercial utility, is an excellent illustration of the application of the best modern principles of typographical design.

POSTAL RATES.—A copy has reached us of the fourth edition of Mr. W. H. Burchell's "At-a-Glance" card of postal rates. We drew attention recently to the first edition of this extremely useful time saving guide to the postal regulations, and the new edition, revised and enlarged, carries additional information and is a valuable asset to any office. Arranged for hanging on the wall, the card, measuring 10½ in. by 15 in. is obtainable (price 1s.) from the Caxton Press, Ltd., Leather-lane, London, E.C.1.

A FINE HOUSE ORGAN.—We are privileged to receive a copy of the *Bridewell and Bromley Magazine*, the house journal of the Grout Engraving Co., Ltd. The place of honour in the new issue is taken by an article on "The Dignity of Labour," by A. St. John Adcock, a portrait of whom is reproduced in very admirable half-tone. Whilst the journal includes much other interesting reading matter, the outstanding feature is the series of handsome plates with which it is interleaved, showing the excellent work in both colour and monotone of which the house of Grout is capable.

THE October issue of the *Print Collector's Quarterly* (J. M. Dent and Sons, Ltd.), is devoted mainly to "The Master E.S.," by Max Geisberg, "The Etchings of J. S. Cotman," by A. E. Popham; "The Etchings and Lithography of Camille Pissarro," by Ludovic Rodo, and "Three Notes on Mezzotints," by Campbell Dodgson, M. W. Hall and John Charrington.

A TOPICAL piece of advertising matter reaches us in the form of a post card printed as a ballot paper, by means of which Messrs. Strong, Hanbury and Co., Ltd., instruct the recipient to "Elect us to supply you with papers, boards and cards for election purposes."

MESSRS. STANLEY PAUL AND Co., of 31 Essex-street, London, W.C.2, send us a small catalogue of their latest publications.

ROBT. FLETCHER AND SON, LTD., Kearsley Paper Works, Stoneclough, have already a big reputation for the manufacture of tissue paper. This reputation will be increased by their latest sample book, which contains 74 specimens. The quality of the papers is, of course, excellent, while the book itself is attractive and useful. An index gives reference quickly to the grade of tissue required. The samples cover a very wide range, and include copyings and every grade of tissue, plain, coloured and waxed.

V. THE PRINTERS.

A match by singles and foursomes took place at Walton Heath on Tuesday, October 24th, when the printers were successful by seven matches to four on the day's play, winning the singles by five matches to three, and the foursomes by two matches to one with one match halved.

SINGLES.		THE PAPER TRADE G.S.

Both teams were the guests for the day of Lord Riddell, whose hospitality was much appreciated, and it was greatly regretted that he found himself unable to play for the printers. Mr. Dykes Spicer was also compelled at the last moment to find substitutes for one or two of his low handicap players who could not attend.

THE late Mr. Alexander Mackenzie, of Old Aberdeen, N.B., stationer, died June 18th, left £3,150.

Printing Trades Sports.

At a concert given at Anderton's Hotel, Fleet-street, on Tuesday, the trophies won by the Miniature Rifle Section of the Printing and Allied Trades Charity Sports Association were distributed as follows:

Field Challenge Shield for Rifle Clubs.—1, John Dickinson; 2, W. H. Smith and Son; 3, Amalgamated Press.

"Walter Haddon" Challenge Cup for Rifle Clubs.—1, Britannia; 2, Amalgamated Press; 3, John Dickinson.

The Championship, printing trade, presented by *Sportsman* newspaper.—1, G. W. Downs (gold medal); 2, G. F. Booth (silver medal); 3, J. Gudgin (bronze medal).

"John Fry" Challenge Cup.—1, G. F. Booth; 2, J. Black; 3, J. Gudgin.

Printers' Rifle League.—Paper Workers' Cup.—Division 1: 1, W. H. Smith's Rifle Club; 2, Dickinson's Rifle Club; 3, Amalgamated Press Rifle Club.

Division 2.—Charles Rond Cup: 1, W. H. Smith and Son's Rifle Club; 2, Steel and Co. Rifle Club; 3, Dickinson's Rifle Club.

The Press Club Dinner.

A big turn-out of members of the London Press Club marked the dinner in the King Edward VII. Hall of the Hotel Victoria on Saturday evening, held to celebrate the fortieth anniversary of the London Press Club. Mr. Lloyd George, ex-Prime Minister, and Viscount Birkenhead, ex-Lord Chancellor, were both unable to attend owing to their political engagements, but Lord Riddell was the principal speaker, and Sir J. Forbes Robertson and Sir Edward Elgar were amongst the guests, who included also Sir Frank Newnes, Sir Ernest Benn, Mr. T. A. Davies (National Union of Journalists), Mr. R. Kier (Newspaper Press Fund), Mr. C. Wells (Institute of Journalists), Mr. T. W. McAra, Mr. T. S. Townend (Empire Press Union), Mr. J. R. Riddell, and Mr. C. J. R. Symes (hon. secretary of the club).

Cleaning Half-Tone Blocks.

To clean a half-tone block which has been more or less damaged by humidity or by too thick a coating of grease which has hardened, take a very clean cork, if possible a rather soft cork, of good quality, smear it with oil or benzine and then rub the block very lightly. You will be astonished at the result.

New Inventions.

Cylinder Machines

Mr. T. McInroy has patented a cylinder machine of the kind in which the reciprocating bed gears with a freely mounted wheel on the impression cylinder fitted with pawls which transmit motion to the cylinder under the control of engaging and disengaging mechanism, as described in Specification 136,284, the machine being arranged so that the cylinder rotates continuously by providing a second wheel geared to the bed by a separate transmission gear, and so constructed that the second wheel takes up the drive as the first wheel is disengaged. The two driving wheels are arranged at the opposite sides of the cylinder, and in addition to the cam-operated disengaging levers 10, 11, similar to the one described in the Specification referred to above, a second pair 22, 23 are also employed. The application of the

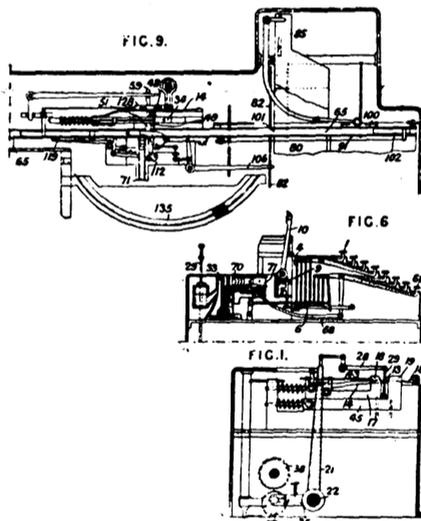

invention to the two-revolution press shown in Fig. 3 is such that the impression cylinder A makes a revolution and a quarter while the bed moves in one direction from the position in which the forme occupies the position F to the position in which it is at F'. The cylinder is then driven by its second drive at a reduced speed, and rotates for three-quarters of a revolution while the bed returns, and the printed sheet is delivered. The cylinder is raised as the bed returns. If desired the cylinder may rotate at equal speeds during successive movements of the bed. In a one-revolution machine part of the impression cylinder is cut away, and in this case the printing movement of the bed may take place while the cylinder rotates through either a half or any fractional part of a revolution and the return during the remaining period. In a two-colour machine in which two printing surfaces are used, the three revolutions of the cylinder for one multi-colour impression may be so arranged that the outward motion of the bed occupies a period of one revolution and three quarters, and the return motion the remainder. In this machine the levers 22, 23 are formed as one cam-shaped member pivoted at its centre. In a perfecting machine, the two impression cylinders are geared together, and each rotate continuously in the same direction.

Type Composing Machines.

An invention by Mr. N. Meier relates to a composing machine in which the matrices are mounted on levers resembling those of a typewriter, and are brought down on the mould by the depression of keys, justification being effected by the use of a limited number of provisional spacers, which are replaced by spaces cast to the proper size. The key-levers 1, Fig. 6, act through rods 4 on levers 6 upon

which rest rods 9 connected to pivoted matrix-levers 10. The levers 10 strike upon an elastic insertion 13, Fig. 1, in an operating-lever 14, which is pivoted on a slide 17 carrying one jaw 18 of the mould. The lever 14 is thereby disengaged from a support 16, and the jaw 18 clamps the matrix against a second mould-jaw 19 carried by a slide 45. The matrix is centred by a sliding rod 43, which enters a hole in the matrix-lever 10. The movement of the slide 17 permits an arm 21 to rock on its shaft 22, and to operate the pump-rod 29 through a lever 28. An arm 35 on the shaft 22 carries an eccentric toothed wheel 37 into gear with a continually rotating wheel 38, whereby the arm 21 is retracted, and the jaw 19 on the slide 45 is caused to remove the cast type from the mould. The burr formed in the jet-orifice 33, Fig. 6, is cut off by a knife, and other knives 48, 49, Fig. 9, remove the burr formed between the matrix and the mould 34. The type is brought opposite to an ejecting-channel 51, Fig. 9, through which it is driven by an ejector 59 into a line-assembly channel 65. A reciprocating pusher 63 advances the type in the channel against a weight-controlled slide 119. The segment 135 in which the matrix-levers are mounted can be shifted for change of fount, and can be removed and exchanged.

Justifying type; galley-mechanism.—Provisional spacers are inserted between the words of the line by depression of a space-key 66, Fig. 6, which acts through a rod 68 and a

feed slide 71 to eject a spacer 70 into the line-channel. After a certain number of provisional spacers have been inserted, the slide 71 causes the space-key to be connected to a blank matrix lever 10 so that spacers of uniform size are cast to form the remaining word spaces. The previously cast and justified line is transferred to a galley 80, Fig. 9, by depression of a hand-lever, which acts through a link 82 on a line-pusher 85, the front wall 91 of the line channel being previously lowered. A line-conveyor 100 provided with a hook 101 is at the same time retracted into a position near the ejecting channel 51 ready to receive the following line, and a line-supporting abutment 102 is advanced by a weight. The link 82 operated by the hand-lever also acts through a lever 106 to shift a carriage 112 and bring the provisional spacer slide 71 into line with the ejecting channel 51, the pusher 63 being at the same time withdrawn from the line-channel. The provisional spacers are now ejected from the line one by one by the ejector 59, the line being moved to the right by the slide 119 after each ejection until a projection on the following spacer engages the end of a slot in the wall of the line-channel. The casting of justifying spacers to replace the provisional spacers is effected by depression of a justifying key, which brings down an adjustable double-wedge matrix on the mould. The adjustment of the wedge-matrix is effected by a slide 128, which is

positioned by an adjustable stop on the line-supporting slide 119. When all the provisional spacers have been extracted from the line, the movement of the slide 119 restores the carriage 112 and the spacer-slide 71 to normal position, and releases the hook 101 by which the line is drawn in front of the galley.

Photo Mechanical Printing.

Printed paper, and other substances, having an endless pattern with half-tones are produced by using deep printing formes with endless pattern prepared by using the photo-mechanical deep printing process in which the image is broken up into printing elements of different depths, and carrying out the transfer of the exposed gelatine layer upon the cylinder and the further treatment thereof in at least two stages so as to avoid the use of safety margins. In an example given, a diapositive with a pattern equal in length to the circumference of the cylinder is divided into two parts along a line at right angles to its length. A screened gelatine transfer which has been exposed to light under one part of the diapositive is placed upon the cylinder and developed, and the cylinder is etched. The process is repeated for the other part of the diapositive. The invention is by Naamlooze Vennootschap Nederlandsche Rotogravure Maatschappij.

GERMAN printing trade workers were unemployed to the extent of 20 per cent. of a reporting membership of 74,016 at the end of August, as compared with 16 per cent. at the end of last July, and 14 per cent. at the end of August, 1921. Of 95,724 German bookbinders reporting, 08 per cent. were unemployed at the end of August, as compared with 07 in July this year and 26 in August, 1921.

Australian Notes.

Printers' Wages—Strikes in the Printing Industry—Dismissals from Government Printing Office—Litho Stone in Australia—A New Company—Successful Sydney Printery.

(From Our Sydney Correspondent.)

THE wages position in the Australian printing industry would seem to be very similar to that in the home country. In view of the decreased cost of living, the Master Printers' Association has been endeavouring to unite Sydney employing printers in enforcing a recently made award which gives legal sanction for reduction of wages. There is, however, very strong opposition on the trade union side, the possibility being freely mentioned of a strike in case wages or working hours were altered in the employers' favour. The workers maintain that the printing industry is in a better position to-day than ever it was before, and that both the quality and quantity of work are better to-day than at any previous time in the experience of the industry. Despite strong feeling among the rank-and-file, the union leaders have succeeded, up to the time of writing, in preventing recourse to the legal fourteen days' notice of a strike.

THE *West Australian* newspaper, Perth, has been the centre of a printers' strike which has had serious results for other newspapers as well as for the paper primarily concerned. The Printing Industry Employees' Union having put before the proprietors of the *West Australian* demands for variation of conditions of work, including increasing of wages, in respect of the newspaper's mechanical staffs, the proprietors retaliated with demands for variations favourable to themselves. A deadlock having been reached, the employers applied to the Arbitration Court for a compulsory conference, and this was called by the president. The parties were unable to agree upon a settlement, and the judge de-

ecided to refer the dispute to the Arbitration Court. The union members, who strongly objected to this course, then ceased work. The *West Australian* has (at the beginning of September) been reduced to publishing largely with the aid of typewriting and process blocks, whilst other papers, including the *Daily News* and *Sunday Times* have also become involved in the stoppage. An appeal by the employers to the Arbitration Court has resulted in the union being fined £50 for instigating illegal cessation of work.

THE Sydney printing trade is much interested in recent wholesale dismissals from the Government Printing Office. It is said that upwards of 100 hands have been dismissed within a month. The dismissed workers, men, women and girls, are representative of all branches of the trade. They include compositors (upwards of 50), letterpress printers, machine feeders, paper rulers, bookbinders, and so on. One man who got his month's salary in lieu of notice had been over 30 years at the office. It is said that there is abundance of work in the office awaiting the doing, and that many of the orders have been awaiting despatch for a considerable time.

A RECENT find of lithographic stone in West Australia may prove to be of consequence to the Australian printing trade. This is not the first indication of the existence "down under" of stone suitable for use by the lithographer, as it is recalled that, years ago, workings were begun in a lithographic stone quarry in Tasmania. The stone was of good quality and equal to the best imported, but owing to the prejudice against a local product the demand decreased. Much of the stone was used in Melbourne and Sydney, and some was sent to New Zealand and South Africa, but the sales were not of a remunerative character.

AN interesting development in the Melbourne printing trade relates to the old-established house of Stillwell and Co., printers. Consequent on its becoming necessary to remove to other premises, the firm has been formed into a limited company. Mr. Alfred Stillwell, who has

been connected with it for 54 years, has retired in favour of his son. The firm will be styled Stillwell and Stephens Pty., Ltd. To mark the occasion, the employees of the old firm met at a Melbourne restaurant and presented to Mr. A. Stillwell an illuminated address, expressing their respect and esteem for him. As a mark of his appreciation of his employees' many years of faithful service, he presented to each of them the amount of a week's wages. For 25 years Mr. A. Stillwell was hon. treasurer of the Master Printers' Association.

THE sixth annual report and balance-sheet of S. E. Lees, Ltd., printers and stationers, Sydney, indicates a net profit of £1,380, after making all deductions and allowances. This compares with £1,601 over the previous term. A dividend of 8 per cent. per annum is payable, compared with 9 per cent. during 1920-21. An interim dividend absorbed £732, and that for the year all told amounted to £1,225; inclusive of £154 12s. paid to employee shareholders. The profit and loss account shows a very steady rate of earning power, the gross total being £32,734 as against £33,143 the year before. In a balance-sheet of £22,012, plant and fittings, etc., figure at £8,666, stock £5,544, book debts £5,156, goodwill £2,000, share subscriptions £245, and sundry assets £400.

Print and Paper Wages in Russia.

Russian Information and Review, which is published by the Information Department of the Russian Trade Delegation in London, contains an article on the subject of collective agreements showing the extent to which wages and conditions of Russian workers are being regulated. According to statistics furnished to the recent Congress of Moscow Unions, the number of employed workers in the paper industry was 536, the whole number being covered by collective agreements. The number of employed workers in the printing industry was 14,300, of whom 13,000 were covered by collective agreements.

Unemployment in Allied Trades.

Official Statistics.

The official report with regard to employment in paper manufacture, printing and bookbinding states that employment in the paper trade continues moderate on the whole, a number of mills being reported as working intermittently owing to a shortage of orders; compared with a year ago, however, there was an improvement in most districts. In the printing trade employment was generally slack; it was slightly worse than a month ago in London, but showed some improvement in most provincial centres. Employment in the bookbinding trade continued bad in both London and in the provinces, and much short time was worked.

Papermaking and Staining.

Unemployment insurance figures give an estimated number of insured workpeople in the papermaking and staining trades as 59,380, comprising 41,320 males and 18,060 females. The number of unemployment books remaining lodged at September 25th was 4,574, representing 3,486 males and 1,088 females, a percentage total of 7.7. The number of short time workers was 447, of whom 313 were males and 134 females. The percentage of 0.8 on systematic short time marks a decline of 0.3 compared with August 21st.

Manufactured Stationery.

Out of an estimated number of insured workpeople of 68,810 (21,070 males and 47,740 females), the 4,203 represent the number of unemployment books remaining lodged at September 25th is made up of 1,831 males and 2,373 females. The percentage unemployed of 6.1 was a decline of 0.3 compared with August 21st. Short time workers represented 224 (60 males and 164 females), the total percentage on systematic short time of 0.3 being a reduction of 0.1 in the month.

Printing, Publishing and Bookbinding.

Under this heading the estimated number of insured workpeople is put at 213,620, of whom 137,850 were males and 75,770 females. Total unemployment reached 12,420, com-

prising 9,257 males and 3,163 females. The total percentage unemployed stood at 5.8, a decline of 0.7 compared with August 21st. Systematic short time claimed 321 workpeople, 130 being males and 191 females. The total percentage of 0.2 on systematic short time showed no variation from the position a month before.

Unemployment in Sweden.

During the past 12 months there has been a marked reduction in the number of paper workers in Sweden who are out of employment. Out of a reported membership of 7,717 on July 31st last the percentage unemployed was 6.3 as against 8.5 on June 30th. On July 31st, 1921, however, the percentage was as much as 60.1 per cent.

Paper and Pulp in Italy.

The *Gazzetta Ufficiale* (Italy) of August 28th published a decree increasing the duties on merchandise from countries which do not accord reciprocity for Italy. Chemical products will have to pay an extra duty of 30 per cent.; colours, 20 per cent.; wall-paper, 30 per cent.; millboards, 30 per cent.; paper and board articles, illustrated journals in the Italian language, 50 per cent.; prints or lithographs, 50 per cent.

Importation of busettes and other articles for spinning mills, lined letter envelopes, compressed millboard articles for machines, boot making and glass paper is prohibited.

Exportation of "news" paper is prohibited.

During the first quarter of this year Italy imported 7,742 quintaux of wet pulp, 17,658 of dry pulp, 172,625 cellulose, 68,435 white or tinted paper, on reels, for daily papers or other periodicals, 25,064 of other plain paper, 213 plain white or coloured, 732 envelopes, 1,541 packing paper, 19,397 ordinary millboard and 1,297 fine quality millboard.

Exports were: 10 quintaux of cellulose, 7,642 white or coloured paper, 5,245 packing, 197 ordinary millboard and 63 fine quality millboard.

An Advertisement is always working.

Paper Trade Protection Association

This Association, which has as its directors Mr. Albert Willmott and Mr. A. Granville White, is a specialised branch of the British Mercantile Agency, Ltd., which was established in 1855. The object of the Association, which was formed for the protection of the paper, printing, stationery and allied trades, is to supply information to members with the least possible delay, to guard against the incurrence of bad debts, and to develop the exchange of information between members with that end in view. While the organisation has the benefit of the vast accumulation of status information and the net-work of agencies and correspondents covering the United Kingdom and all the principal places abroad, which have been developed by the Mercantile Agency, it is centralising its own particular work at 13 and 14, Old Jewry Chambers, London, E.C.2. Thus for an annual subscription of £1 is. members obtain the valuable services set out in the advertisement in a previous issue. Every effort is made to render the reports of the most reliable character and to make them of still greater use by a system of exchange of information between members, through the medium of the Association registers. Under an extension of the continuous report system members are automatically informed of any fresh facts which tend to vary credit opinion previously expressed. Steps are on foot for extending the present searches, and the Association is to work in conjunction with the recognised trade organisations already existing with a view to assisting the trade in every possible way, and to relieve members of expense and trouble when bad debts occur. A conference of trade houses expressed itself in favour of the objects of the Association, and representatives from the following firms have been elected as an advisory committee:—Messrs. Allen Strong and Co., Ltd., Chas. Morgan and Co., Ltd., John Dickinson and Co., Ltd., Grosvenor Chater and Co., Ltd., and Wiggins, Teape and Co. (1919), Ltd. We think, that with such an organisation, the Association should prove of great benefit to the trade.

The Influence of Photo-Offset and Rotary Photogravure on the Future of Letterpress Printing.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

The increasing use of photo processes for various kinds of printing and the great improvement which is being continuously shown in the results of these methods, especially in connection with offset printing, are leading letterpress printers seriously to ask the question how these developments are going to affect their branch of the printing industry. I propose to address myself to answering that question so far as it is possible to do so in the light of present knowledge. To answer it completely would require the prescience of a prophet, for no one can exactly foresee how these new processes will eventually develop. One can only indicate by deduction and inference the direction in which they may tend.

So long as these photo processes were confined to the production of illustrated matter, whether by blocks, by lithography or by photogravure, letterpress printers did not view them with any alarm, but rather looked on them either as a valuable auxiliary to their own business or as useful for special purposes outside the province of typographic printing. But when it is seen that an increasing amount of text matter is being printed by offset and rotary photogravure, and that the results are very good, even being preferred by some customers, letterpress printers naturally begin to ask where they stand and what the future is going to bring forth.

Text Composing Without Type.

At first they consoled themselves with the reflection that so long as the type had to be set before it could be used for either offset or rotary photogravure, there was not much to fear, as there could hardly be a great difference in cost. When, however, there were rumours that before long it would be possible to compose text matter without setting type, the trade began to "get the wind up," as the saying goes.

Photo-Composing.

In the last two or three volumes of "Penrose's Annual" I have given evidence that inventors are at work on such methods and that some of them have actually achieved pretty good results. I also warned the trade of what was coming in my address to the World's Printing Trades Congress held at the last Printing Exhibition, but my remarks were received with scepticism. I am able to show you here to-night some proofs of the work of Mr. Arthur Dutton, of Liverpool, which I think you will agree are very good

Lecture delivered last week before the Association of Master Printers of the London Central Districts.

evidence that progress is being made towards the realisation of this idea of composing without type. You will see that he is able to compose either display or solid matter and ornamental borders, that he can justify his lines, and that from one set of master letters equivalent to a face of type he can get any size in the point scale. You will also see that the alignment is good and that the lettering is clear and sharp. I am not permitted to tell you how it is done, but I have seen the apparatus at work—only a rough model, yet sufficient to produce the remarkable work shown. It only needs the construction of an apparatus hardly more complicated than a typewriter and certainly far more simple than a linotype or monotype.

There is also on the market already in New York an apparatus called the Desatype which produces very good display matter in the form of copy for the engraver or photolithographer, but it does not seem adaptable for solid text.

The Robertson Patent.

You have all, no doubt, heard of or have read about the patent of Messrs Robertson, Brown and Orrell, which emanates from the house of Robertson of St. Annes, the firm who have made themselves famous for the production of the *Blackpool Times* and the *Sunday Express* supplement, by offset printing. Their apparatus is to be something like a linotype machine in appearance, only instead of matrices there are little frames of metal containing glass negatives or positives of the letters of the alphabet. When a key is touched a letter comes down, and thus a line of letters is built up. Then the camera comes into operation; a beam of light is directed through the glass letters, and an exposure made. The camera makes a step, and the next line is set up and similarly photographed. So the operations go on until a column or a page is composed. The photographic images are received on a celluloid film in negative form, so that as soon as the film is developed it is ready for printing down on zinc.

The Problem of Making Corrections.

I know the question will be asked "What about corrections?" Well, corrections can be made by cutting out a piece of the film, just as the cinema man cuts out portions he does not want and joins up again. There is no difficulty about that. I can see some other difficulties which all inventors in this field will meet with, but I do not think they are insurmountable. In view of the marvellous results which have been achieved by the cinematograph, and the perfection of me-

chanism attained, I don't think we can look upon photo-composing as a more difficult problem. Or again, it is not one quarter—perhaps not one-tenth—as difficult as the work which has had to be done in perfecting the linotype, the monotype and other type-composing machines.

Photo-composing in Five Years' Time.

It is no good saying the thing cannot be done. Just think what has been accomplished in cinematography, in aerial photography, and in colour photography, without going further into the field of mechanical invention and scientific accomplishment. Nothing is impossible for the scientist and the engineer in these days, except the production of living matter from the inanimate world, and there are some who think even that will be possible.

You must face this possibility of photo-composing. It is bound to come, and I give it five years to develop. After that, I am afraid, type-setting will be a decaying branch of the printing industry.

When will Type-setting be Superseded?

I do not mean to say that type-setting will be entirely superseded in five years, but that it will take that time for the photo-composing machine to attain such a degree of perfection as will enable it to be put to practical use. So there is no need to get alarmed and sell off your plant, or refrain from buying new plant. That would be absurd. It may take a generation before type-setting machines and hand composition are largely superseded; that will give the trade time to adapt itself to the new conditions, and enable the displaced labour to find other means of employment.

Effect of the Change.

Do you realise what the change portends? If there is no type to be set, a whole lot of things go overboard with it. There will be no need for typecasting, stereotyping, electrotyping, block-making; and if these things go, so also goes the greater part of letterpress printing machinery. What a colossal change it will be!

Relative Cost of Old and New Methods.

I am told that in a certain printing works employing some 50 to 60 compositors and monotype operators, the capital outlay involved in type and metal amounts to between £8,000 and £10,000. There is also an equipment of three monotype keyboards and casters which, with the stock of matrices, have cost £4,000 to £5,000. Say in round figures there is a capital outlay, due to type-setting, of £15,000. Suppose this were replaced by photo

The Miehle

About Make-Ready

Many orders for printing are lost through the heavy cost of make-ready overloading the estimates.

Comparison of cost of make-ready on a Miehle Two-Revolution Press with that on a Stop-Cylinder Press always shows a striking margin in favour of the Miehle.

There are two outstanding reasons why the Miehle is so much better in this respect: First, facilities are provided for free access to the cylinder; and secondly, much less make-ready is required.

The Miehle reduces pressroom charges in many other ways, of which we shall be pleased to give full details if you will write us accordingly.

composing machines. I reckon that such apparatus could be sold for about £250 to £300 per unit. Of course there would be some additional outlay in respect of the master alphabets for the photo-composing apparatus, but it will be nothing like the cost of matrices, because one alphabet for each face will yield any point size, by reduction of the image with the camera. If we put the additional cost of the alphabets at £50, we have a cost per unit of £300 to £350. Now, it is difficult to say how many units would be required to replace the work of 50 or 60 men doing monotype and hand-setting, but suppose ten unit machines would do that; then you would get for £3,500 an equipment equivalent to that which has cost £15,000 under the old system. There is therefore a good margin for adding more machines or to cover the possibility of the machines being more expensive. The machines will occupy little floor space and require no power. Some electric light will be wanted, but this will not be a serious item. There will also be the expense of photographic plates or films and chemicals, but it will be nothing like so much as for type metal.

The Labour Required.

As to labour cost, there may not be much difference as against operating a monotype or linotype, for a skilled operator will be needed; but the work will probably be done more quickly, in fact as quickly as on the typewriting machine. A man will be wanted to develop the films, but he will be able to keep pace with several keyboard operators. Another man will be wanted for laying down the films according to the imposition required, and, in a large shop, a man for printing down on the metal and preparing the plate for the machine. In small shops one man could probably carry through all the operations, but in large newspaper and book offices the operations would naturally be subdivided. In any case, the work would proceed much more quickly than type-setting, and of course, on large editions, stereotyping would be saved.

Speed of Printing.

So far, I have assumed that offset plates would be prepared, but machine builders have yet to prove that they can get a speed equal to the stereo rotary. The films prepared by the photo-composing machine could, however, be used equally well for making photogravure cylinders, and we know that with rotary gravure printing an equivalent speed to the stereo rotary can be attained.

It may even be more convenient, for a time, to use the film negatives for making etched plates or blocks and stereotyping them for the news rotary, as was done with typescript by several provincial newspapers during the recent strike. There will be no difficulty about doing that; and it would be a convenience, though not a great gain. The fact that these photo-composing machines might be operated by women is not to be overlooked. The work would be no more difficult than typewriting.

Probably photo-composing will be more useful for newspaper and periodical work than for job printing. Think what it would mean for a newspaper having from 40 to 50 linotype machines, with all their attendant equipment, to say nothing of the stereo plant and the costly and elaborate printing machines necessitated by the system employed. If type-setting and stereotyping can be dispensed with, the whole mechanical system for turning out a newspaper becomes vastly simplified and cheapened.

Of course, where illustrations are required there will be additional photo process plant, but it will not cost so much as the equipment for blockmaking, because the equipment for routing, bevelling, sawing and planing the blocks will not be wanted.

Cost of Printing Machinery.

As regards cost of printing machinery, there may not be very much difference between machines of equivalent size, whether for letterpress, offset or photogravure, so long as sheet-fed machines are used. But for an all-rotary perfecting machine for newspaper work, the photogravure machine will cost much less than the stereo rotary.

Whichever way we look at it, I feel sure the change from typographic to photo process methods will mean cheaper plant, cheaper production, less labour cost and reduced overhead charges.

An Unthinkable Change?

I fully expect some one will get up and say in the discussion which is to follow, that such a change as I am indicating is unthinkable, that it is impossible, and that the man who

predicts it is a mere dreamer. But have you forgotten the change that has been brought about in less than one generation in the printing trade by the introduction of the linotype, the monotype and other type-composing machines? I can well remember that in the days of my apprenticeship to the printing business there were no such machines, or at any rate we only heard about inventors being at work on the idea, and the crude models which were shown at the trade exhibitions did not seem very promising. There were many printers in those days who predicted that mechanical typesetting was an impossibility. What have those prophets to say now? I feel sure this change from type to photo work must come about, because it is a thing that is needed by the conditions of today. Therefore you must face it and make the best of it.

Why Not Still Make Blocks?

You may ask why it would not be possible to utilise the photographic negative for making blocks, instead of printing plates for offset or cylinders for rotary gravure. The answer is that though this course is quite possible it is not economical. When negatives are printed direct on to zinc offset plates the process work is ended and the plate is ready for the printer; and in the same way when work is put on the copper cylinder for gravure there is much less for the process man to do than in making blocks. When blocks are to be made the image put down on the metal plate has to be etched, fine etched, routed, bevelled, proofed and mounted. When the printer gets the blocks he has to fit them into the formes, possibly has to underlay them, and certainly has to spend a good deal of time making ready. There is no make-ready in either offset or gravure printing. Half an hour, or an hour at most, may perhaps be spent in getting things in working order for the run—adjusting impression, flow of ink and damping mechanism in the case of an offset machine, whilst in the case of gravure there is a similar tuning up to be done, but it is small matter compared with the time spent in making ready a forme of blocks, especially a large forme.

Will the Advantage Justify the Change?

The printer with a purely letterpress plant may say that the advantage gained is not sufficient to justify him in going in for offset or rotary gravure. It would mean installing a new plant and a new department of the business. But the economy does not end with what has already been indicated. It is to be found also in the ease with which large sheets with a number of repeats can be printed. From the one photographic negative any number of duplicates can be laid down very cheaply, whereas to do the same thing by letterpress would mean having stereotypes or electros, which would be much more costly. This expense would be greatly increased if a colour job had to be worked. In the case of a small label in two, three or more colours, letterpress would be quite "out of it" in price, for it could be put down on the plate by the step-and-repeat process at far less cost than by using blocks, and the number of repeats that could be printed on a sheet by offset would reduce the cost of machining enormously on a long run.

Why Not Use Transfers?

The lithographer may ask whether it would not be possible to achieve a similar result by transferring. He could not possibly do so against an efficient photo printing process. The mechanical devices which are now being so largely used in America for repeating subjects in the printing-down frame enable the work to be done very rapidly and correctly, especially for colour work. The second and subsequent colours can be laid down in absolute register with the first.

Step-and-Repeat Methods.

I am afraid there is some misconception as to the step-and-repeat method. It does not simply consist in making a stepped-up negative, as that is limited in size. There must be a further stepping in the printing down frame to make up large plates such as 40 in. by 30 in. or 60 in. by 40 in. The Americans seem to prefer to do all the stepping in the printing down frame from one negative image, and I am inclined to think that is right. If it is desired to speed this up it is quite possible to make two or four exposures on one plate in the ordinary process camera, without resorting to an elaborate and costly apparatus. There are something like half a dozen devices being offered in America for stepping whilst printing down, and the latest, known as the Bassist, is an extremely simple one applied to what is practically an ordinary face-up print-

ing frame. It is with such devices that the greatest development may be expected.

Laying Down Text Matter.

So far, I have had in mind the preparation of plates bearing designs and illustrations from line or half-tone negatives. We have to consider also the printing down of text matter. So long as type has to be set for it, the procedure is usually that of pulling a good proof as copy for the process operator, who makes a line negative for printing down. It is here that failure very often comes in. The letterpress printer does not seem to be able to pull a good proof unless he can make it ready on the platen press or cylinder machine. He has not achieved the skill of the photo-engraver's proofer, and too often he produces a proof which is squashed, the ink being spread and the impression too heavy. This is bad for the photographer. The lithographer is usually unable to pull a good letterpress proof, and thus the two branches of the printing craft do not help each other.

A New German Process.

The Germans have got a process of printing the text matter on to a celluloid material, not the ordinary celluloid, but a special cellulose product which is very flat and flexible. A good sharp print is got on this, and is dusted with bronze powder to make it more opaque. This celluloid print takes the place of the photographic negative for printing down. Of course it gives a white line print, but this is easily converted into black line by a simple reversing process.

Photogravure workers adopt a similar plan by printing on translucent paper, and the Vandyke method used for the printing of maps and plans in the Government offices is similar in principle to the method I have just described, the actual drawing being printed through instead of making a negative.

Where work is already on stone or in type it is quite simple to take a transparent pull and use it instead of a negative so long as the image is required same size.

The "Manul" Method.

A good deal of interest has been created by the "Manul" process. This is a method by which a negative can be produced from the pages of an ordinary bound book without using a camera and without damaging the book in any way. The method consists in laying a specially sensitised plate on the page and allowing the electric light to shine on it. The rays go through the plate and are reflected back by the white paper but not by the black ink. Thus the gelatine on the plate is hardened in the parts corresponding to the white paper whilst the rest corresponding to the print can be washed away. The film is afterwards dyed and stripped from the glass, and a sheet of 64 pages can be easily printed from the film at one exposure. This is much cheaper than photography and requires less plant, but it is limited in its application to same-size facsimile work. A good deal of reprint bookwork is being done by this process.

The Advantages of Offset.

Summarising the advantages of offset against letterpress, we may say that:—

1. The cost of making the printing surface is less than for blocks and type formes.
2. There is no make-ready.
3. The printing speed is higher than on flat-bed letterpress machines.
4. By using two colour rotary offset presses, either two colours can be printed at once, or two sides of the sheet in one colour.
5. It is unnecessary to use expensive coated papers.
6. The consumption of ink is less.
7. The power absorbed by a rotary machine is less than for a flat-bed letterpress machine.
8. The capital tied up in keeping type formes standing is vastly greater than for keeping negatives and zinc plates. (A zinc plate for printing a 60 by 40 sheet costs from 20s. to 26s.)
9. For colour work high lights can be printed without any grain or screen over the whites and with soft vignetted edges such as it is very difficult to get with blockwork, except by elaborate make-ready.
10. Half-tone can now be printed on the offset press with quite pleasing results, and customers are preferring the soft effects to the harshness of half-tone block work on coated papers.
11. The photo-process part of the work is simpler and cheaper than making blocks.

Application to Colour Work.

It may be urged that for colour work there is no real equivalent for fine etching, by which the most perfect results in block work are produced. This is being remedied by re-

touching on the negative and by developing the image on the plate. Processes are also being employed which claim to do without retouching, and very fine results are attained. Hitherto a good many of the failures of offset work have been due to the operators making half-tone and colour negatives in the same way as for blocks, whereas a quite different negative is required for photo-offset. Grain processes are now coming largely into vogue for photo-offset because such work can be rendered much better by it than by blocks. Perhaps it may be urged that an offset plate would not wear through a long run so well as copper half-tone blocks. There is no very definite evidence on this point, but I may point out that it is easy to make a duplicate plate once you have the negative.

The Bearing of Rotary Photogravure.

So much for offset. Now let me refer to the bearing of rotary photogravure on the work of the letterpress printer.

As to the quality of the results of photogravure compared with either block work or offset, there can be no difference of opinion so far as single-colour work is concerned. Just consider the wonderful richness of the tones, the photographic fidelity of the result and the absence of screen effects. Undoubtedly the public like this kind of printing and buy freely the publications printed by its means. They recognise and appreciate such printing as a relief and a change from the monotony of half-tone.

As with offset, it is possible to print on almost any kind of paper. Even on the commonest "news" paper the results are far away better than half-tone. But, of course, the more suitable the paper, the better the result, and photogravure needs to be printed on good paper to show at its best.

The consumption of ink is very low—something like 1 to 1½ lb. per 1,000 copies on a large news or periodical sheet.

Printing Speed of Gravure.

The speed of printing is much greater than either offset or letterpress printing when rotary machines are used. For high-class work, 4,000 to 5,000 perfected copies per hour are easily obtained, but, for cheap newspaper work, speeds of 24,000 to 32,000 copies per hour have been achieved—in the *Cape Times* office. There is no make-ready with rotary photogravure, and no special attention is needed to secure uniform good work throughout an edition.

It is now possible to put down solid text and display matter on the cylinders for printing at the same time as the illustrations, and it can be made to look as acceptable as letterpress printing.

Thus the advantages are all in favour of photogravure for book, newspaper, and periodical printing, but it does not compete with offset for commercial work, nor at present does it compete with either blocks or offset for colour printing. Its application to colour work is still in the experimental stage, but some very fine results have been obtained and they give promise of greater achievements in the future.

Cost of Cylinders.

One of the questions which arise in connection with gravure is the cost of cylinders compared with blocks or offset plates, though it is hardly a matter for comparison because the cylinders are used with the special object of securing a certain result which cannot be obtained by either of the other processes. Still, some comparison can be made without disadvantage to gravure. For plain, straightforward work, without elaborate lay-out and borders, the cost of a cylinder filled with pictures will be much less than the same area of blocks. It is not easy to figure the cost of gravure work on a square inch basis because the engraving and printing must be taken together. I believe one house which works for the trade figures out the cost of engraving cylinders at 10d. per square inch of surface, but it can be done much cheaper by firms making their own cylinders. If there were 16 8 by 5in. pages on the cylinder, the cost would amount to £26 13s. First-class squared up half-tones for the same size would come to £31, on the basic rate of 1s. per square inch. If, however, there were text and pictures to be reproduced the cost would be much more, as both line and half tone blocks would have to be made and joined up.

Printing Gravure from Copper Plates.

Probably the cost of making an offset plate will be in every case less than making a cylinder, but no offset plate can ever produce the results of the best photogravure work. Soon, I think, it will be possible to print

gravure from thin copper plates bent round a cylinder. Then, I think, gravure will compare very well with offset, and printers will be able to get these plates made outside as readily as they now get blocks or offset plates.

Colour Gravure.

As to the possibilities of colour printing by the gravure method, progress is being made, and the results are most promising, but many difficulties have yet to be overcome. It is not possible to do anything on gravure cylinders equivalent to fine etching; therefore all the effects must be obtained in the negatives. This means a great deal of retouching unless some improved process of colour selection can be found. Further, the ink makers seem by no means sure of what is required.

Some very artistic results have been obtained in this country and in Germany and Holland on flat-bed machines and sheet-feed rotary machines. Colour work on all rotary gravure machines presents much more difficulty. Nevertheless, some excellent results have been got by a German house, which prints all the colours simultaneously on a machine similar to that used for coloured wall-paper printing. In America, the *Chicago Tribune* has for some months past been producing regularly a Sunday supplement in colours by gravure printing. I believe that the system employed is to produce first one cylinder as the key, and from this retransfer to other cylinders, which are worked on by etchers accustomed to picking out colours, who remove or add work as required. Each colour cylinder is put into a separate printing unit, and the web of paper passes from one to the other. The Prisma-tone process which is being exploited in America, is, I believe, a similar method for producing the colour cylinders. The purely photographic method of colour separation presents difficulties for gravure just as it does for offset, and much retouching must be done at present to get a passable result. There remains much to be done to achieve perfect results in colour printing by gravure, but if it can be accomplished so as to make it a commercial process it will be a powerful competitor of all other forms of printing.

Effect of the Coming Change.

I think I have said sufficient to show you that there is going to be a changing over in printing methods, and you who are in the business will be wise to keep up with the procession, for it will be a case of "get in or get out."

The change will reflect itself on the character of our books, our newspapers and our periodicals. There will tend to be less solid matter in them and more pictures, flaring headlines and snappy titles. People are getting so used to looking at pictures on the screen (and will soon get habituated to hearing the voice of the wireless broadcaster) that they will be too lazy or in too great a hurry to read any lengthy text matter. Thus the glory of Fleet-street will depart. No longer will the leader writer have the powerful influence he now has, or once had, on public opinion. The press photographer, the process man and the picture editor will be the only ones that count in the newspaper world and in the sphere of our magazines and periodicals. Our advertisers will use pictorial aids more and more. Educationalists will resort more extensively to the use of pictures. It will be the age of the picture book, mankind's return to the primitive method of communicating thought. What its influence will be on the future of civilisation one can hardly conceive, but it is a change that will fit in with the increasing speed of locomotion. When we are shot through a high speed tube to and from our houses at the rate of 120 miles or more per hour there will be no time to smoke our pipes and read with more or less leisure the morning and evening papers. We shall just be able to light up a cigarette and look at the pictures. When we arrive home after the nerve-racking pace of our daily round and common task, we shall have no inclination for serious reading. All will crave for pictures—more and more pictures. Sated by black and white half-tone, slaty-grey offset and brown toned photogravure, our next craving will be for colour. That the process man and the printer will supply the demand I do not doubt.

[The discussion which this lecture elicited is reported on another page.]

LIFE does not consist merely in breathing, but in action—*Rousseau*.

Profit-Sharing in Allied Trades.

Some interesting particulars concerning profit-sharing schemes are contained in an article which appears in the *Ministry of Labour Gazette*. According to this, there are a total of 206 schemes known to be in operation at the present time. Information is given concerning the 169 schemes, of which three apply to papermaking and 12 to bookbinding and stationery manufacture. In the paper-making schemes the number of employees participating is put at 543, the average amount of bonus per head being £9 os. 1d., while the average ratio of bonus to earnings is 3·1 per cent. In the 12 printing, etc., schemes the number of employees participating is 5,045, the average amount of bonus per head being £11 os. 6d., and the average ratio of bonus to earnings 7·1 per cent.

THE great difficulty which scientific societies are experiencing in finding money for the publication of memoirs as the result of the increased cost of printing was stressed in the presidential address delivered by Major P. H. Hepburn at the annual general meeting of the British Astronomical Association recently.

Printers and the General Election.

**Federation Calls Trade to Action—
State Printing, Postal Rates,
Merchandise Marks.**

Prompt and vigorous efforts are being made by the Federation of Master Printers to ensure that full advantage shall be taken of the opportunity afforded by the General Election of impressing upon Parliamentary candidates several points of a non-contentious character which are of special interest to the printing industry. The Federation, we understand, has communicated with all its local associations urging immediate action in the matter, and already reports are to hand that the local associations are getting busy in their respective constituencies.

The following are questions which, it is suggested, printers should put to Parliamentary candidates everywhere:—

1. Are you opposed to State trading as a general principle?

2. In the interests of economy and in view of the heavy loss of £32,000 in 9½ months, as declared by the Auditor-General in his recent report, will you support any movement for closing the State printing factory at Harrow?

3. Are you prepared to press for a further reduction in postal rates, especially so in the rates charged for postage on printed matter, as the present high rates are causing a great amount of unemployment in all trades throughout the country?

4. Will you support amendments to the Merchandise Marks Act, which will enable the consumer to know the country of origin of all printed matter either purchased or used?

To assist the localities in taking rapid action in the matter the Federation has sent out a suggested form of letter to indicate the lines on which local Master Printers' Associations should write to all local Parliamentary candidates (except Labour candidates, whose views are known to be generally in favour of nationalisation). This letter contains the following passages:—

"Several questions are of particular interest to printers in this district as bearing not only on the conditions which affect their trade, but also on the paramount question of national economy.

"For some time past the steady growth of State printing at Harrow and elsewhere has caused great anxiety to the employers in the printing group of trades, a very large quantity of work hitherto executed by private enterprise having been diverted.

"The Auditor-General's report, issued on October 2nd last, shows that the loss incurred at Harrow amounts to £32,000 for 9½ months, and there are also serious losses on the other State printing offices, some of which have now, however, been closed and part of the plant transferred to Harrow.

"The taking over of the large printing works at Harrow occurred during the war in order to produce the printing required for food control. It was decided to continue these works for an experimental period of three years, which expires in June next.

"The recent report supplies sufficient evidence that this experiment should be brought to an end as quickly as possible. All the work which is done at Harrow could be done as efficiently and more economically in printing works under private control.

"I am, therefore, to ask you to give me your views regarding State printing in the form of an answer to the questions on the attached list."

"The opportunity is taken to ascertain also your views regarding the necessity for a further reduction in postal rates in order to hasten the general recovery of industry and commerce and thereby to relieve unemployment.

"Another question which is also of general interest is your views regarding amendments to the Merchandise Marks Act, which will give power to the Board of Trade to render the Act more effective than at present with regard to printed matter coming from abroad.

"I desire to place your views before the members of my Association at the earliest possible opportunity for their guidance at the forthcoming election, and would ask for a reply by return of post."

The Federation is also circulating leaflets suitable for use in bringing the facts to the attention of candidates and in bringing the matter to the attention of the public through the local Press.

Mr. Frank Lloyd Entertained.

A Trade Jubilee.

Due honour was paid to Mr. Frank Lloyd last Thursday when he was entertained by his many friends in the allied industries at the Savoy Hotel, London. Lord Riddell presided over a large and enthusiastic gathering. The deep regard and affection in which Mr. Lloyd is held was very evident throughout the proceedings, which were of a cordial and enthusiastic character.

Following the toast of "The King," Lord Riddell gave the toast of "Mr. Frank Lloyd."

Mr. Lloyd, as they all knew, was one of the institutions of Fleet-street. He had been in business for 50 years. He had been engaged in great transactions of varying sorts, and he thought he was justified in saying, not as a mere figure of speech, but as expressing a fact, that Mr. Lloyd had not got a single enemy to-day. Mr. Lloyd was his ideal of what a British manufacturer and business man ought to be. He had the great qualities which had made British commerce

MR. FRANK LLOYD.

what it was all over the world. (Applause.) True, able, honourable and kind-hearted. (cheers.) He (Lord Riddell) had been engaged in a little mental arithmetic, and as far as he could calculate, Mr. Lloyd had been guilty of making 200,000,000 miles of paper. (Cheers.) It was a horrible thought—(laughter)—and it was also a pleasant one. (Cheers.) Although he had made so much paper, and although no doubt he had made so much money out of his customers, not a single one of them had any *arrière pensée* regarding their paper supplies. (Hear, hear.)

Looking Back Fifty Years.

Mr. Frank Lloyd, on rising to respond, was greeted with a most enthusiastic ovation. He said he wished to tell them how deeply he appreciated the honour they had done him in inviting him there that day to meet the distinguished representatives of the newspaper world and of the paper trade, who had come there to do him that great honour.

If he looked back over the fifty years of his business experience, he could recall many and great changes in both the Press and paper-making. He had seen the great advance in the power and influence of the Press, coupled with the tenfold increase in the circulation of the daily and morning papers. Also he had seen the wonderful development of the popular weekly papers. There had been the great change in his time from the small weekly news-sheet to what now more nearly corresponded to a double Sunday morning edition of a daily newspaper. He had seen the introduction and the great success of the purely picture paper. He had seen the passing of wood-engraving in favour of photographic reproduction of passing events. He had watched the evolution of the printing press from the old four-feeder in use in his early days to the gigantic octuple rotary presses of to-day.

London Monotype Users.

Annual Meeting of the Association.

The annual meeting of the London and District Monotype Users' Association was held at the Holborn Restaurant on Monday last, when Mr. G. R. Reveirs took the chair and presented the annual report.

The report dealt with the activities of the Association and referred to numerous conferences with the London Society of Compositors and the Amalgamated Typefounders' Trade Society, and to the present position of the negotiations regarding the scale for monotype work. An animated discussion followed, and the views of the members present were shown to be strongly in favour of a simple piece scale which would be optional and also be free from irksome conditions as to extras.

Mr. D. G. Milne, presented the treasurer's report, showing a balance in hand, and indicating also that the membership now includes 85 monotype users, using 253 casters. It was suggested that steps should be taken to secure the membership of all monotype users in the area.

The following officials and committee were elected for the ensuing year: Chairman, Mr. G. R. Reveirs; vice-chairmen, Mr. H. Basil Cahusac and Mr. A. Spring; treasurer, Mr. D. G. Milne; secretary, Mr. A. E. Goodwin; committee—Lieut.-Col. G. C. K. Clowes, Messrs. G. W. Phillips, F. W. Cheyne, P. Walmsley, A. Q. Cooper and A. H. Wilson.

Mr. S. A. Penny, representing the West of England Monotype Users' Association was present and gave an interesting address on the cost of monotype composition.

It was decided to circulate to members in the area a booklet giving details of all costs.

Several letters of regret were read, the writers including Mr. Waterhouse, Col. Fletcher, Mr. R. A. Austen-Leigh and others.

The members having been entertained to tea by the Lanston Monotype Corporation, thanks were accorded to Mr. Burch for this hospitality and warm appreciation was also expressed of the services rendered in the chair and at various conferences throughout the year by Mr. G. R. Reveirs.

Samson Clark Building Opened.

Lord Leverhulme on Advertising.

The new Samson Clark building in Mortimer-street, London, the largest building in the country devoted solely to advertising service, was formally opened by Lord Leverhulme on Monday in the presence of a large number of guests, including many well known in publicity and printing circles.

The Samson Clark building has a total floor area of 26,000 square feet, spread over seven storeys, each of which is devoted to a branch of advertising work. It occupies the corner of Mortimer-street and Great Titchfield-street, and rises to a commanding height, much above that permitted under the old building regulations for London. It consists of seven storeys, erected on a steel frame and faced with white faience blocks. The interior planning provides, amongst other things, for studios, block-making, printing, and photographic departments, and the many processes associated with this comprehensive business.

Referring to the functions of advertising, Lord Leverhulme said that in business there must be close co-ordination between the advertising and selling departments, and each was essential to the full effectiveness of the other. He believed that those firms which had taken some proportion of their profit from year to year to be reinvested in advertising had been able to weather storms better than if they had invested their profits in what were called gilt-edged securities. Successful advertising did not depend so much on the amount of money spent as on the amount of thought the advertiser brought to his campaign.

A new firm, organised for the importing of English and the exporting of German books, has just started in business at Goettingen, Germany. Under the name of A. R. Pillai and Co., the firm is announced as being "entirely under British management" and will be agent for the publications of the London Times.

London Printing Trade Wages.

In regard to wage-reduction in London, the position to-day is that all the unions in negotiation with the London Master Printers' Association have accepted a reduction of 6s. in two instalments, with stabilisation until the end of next year, with the exception of the N.S.O.P. and A. (who have rejected) and Machine Managers (whose ballot result is not yet known), the Correctors of the Press and the Paper Workers' Union, these two societies not yet having decided to take a ballot on the question. The London Society of Compositors last week decided by a large majority to accept the wage-reduction proposals.

At a conference between the L.M.P.A. and the L.S.C. it was decided that the result of the ballot in the case of those London unions which have accepted should not be carried into effect until such time as the employers had given definite notice to the unions which have not accepted the reduction that they intend to enforce such reduction, and give a date on which they intend to enforce it.

The London Master Printers' Association is to consider the matter at a special general meeting on Tuesday, November 14th, at 12 noon, at Stationers' Hall.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

BRITISH WEST INDIES (TRINIDAD).

A manufacturers' agent in Port of Spain, who already represents United Kingdom manufacturers of non-competitive lines, desires to secure the representation for the Colony of Trinidad of United Kingdom manufacturers of stationery, etc. (Reference No. 449.)

NETHERLANDS.

An agent at Amsterdam is desirous of securing the representation of United Kingdom producers of waxed papers in rolls and sheets, paper bags, cartons, lace paper, etc., and also manufacturers of advertising tape. (Reference No. 462.)

Printer's Remarkable Features.

Ben R. Johnston, of New York, is by trade a journeyman printer, but some years ago it was represented to him by an artist that his features strikingly resembled those of the traditional picture of Jesus Christ, says the *Canadian Printer and Stationer*. He therefore decided to let his hair grow and retain his beard, so that for the last ten years, when not composing he has been posing, and has sat for artists and photographers all over the world. Mr. Johnston's hair is about fifteen inches long, but it is inconspicuous when he is on the street as he coils it up beneath an ordinary cap which he wears.

His great grandfather came from Scotland and homes'aded in York County, Toronto, and his grandfather and father were born on that farm. Mr. Johnston says he was raised in Missouri, learnt his trade, as a printer in Nebraska, and made New York his headquarters in 1893. But he is continually going, and he made a four years' tour around the world starting in the fall of 1900. He intends this autumn to start on a European journey which he expects to last for ten years.

Trade in Printing Type.

EXPORTS.—During the first three-quarters of the year British printing type was exported to the extent of 129 tons (£43,748), as contrasted with 233 tons (£86,864) in a similar period last year, and 195 tons (£56,599) in January to September, 1920.

IMPORTS.—In the nine months ended September printing type entering this country stood at 31 tons (£10,916), compared with 24 tons (£11,792) last year and 21 tons (£7,849) in the corresponding period of 1920.

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

	Three Lines	s.	d.
Agencies	3	0	
Situations Wanted	1	6	
Situations Vacant	3	0	
Machinery for Sale and Wanted ...	3	0	
Businesses for Sale and Wanted ...	3	0	
Shares for Sale and Wanted ...	3	0

Three Insertions Charged as Two.

The following are the rates for Advertisements classified as under:—

	Per Line	s.	d.
Sales by Auction	2	0	
Tenders	2	0	
Patents for Sale	2	0	
Legal and Financial Announcements	2	0	

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.4 for which a fee of 6d. is charged to cover postage of replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ADVERTISER seeks opening with a firm of Paper Merchants; good general knowledge of the trade, also English and Foreign shipping.—Box 14004.

ADVERTISER (disengaged) desires Responsible POSITION with large firm of Printers, Publishers, Wholesale Stationers or Paper Agents; expert knowledge on all matters pertaining to Paper and good, sound knowledge of Print and the various processes employed therein.—Box 14012.

BUYER, desires change; intimate knowledge Paper Market; five years Buying experience all classes Paper, Wrappings, Printings, Boards, etc.; used to controlling staff; excellent references; Edinburgh and Glasgow district preferred.—Box 14002

LADY seeks situation; experienced Printing also Advert. Business, knowledge Shorthand, Typing and General Routine.—P., 79, Ballater-road, S.W.2
14014

Production of U.S. News-print.

Reports received by the Federal Trade Commission, Washington, from domestic manufacturers of news-print paper, from jobbers buying and selling news print paper, and from publishers using news print paper, show that the average production of total news print and standard news, based upon the total combined production for the years 1917 to 1921, inclusive, amounted to 118,800 tons of total news-print and 107,676 tons of standard news, for a period corresponding to August. The actual production for August, 1922, amounted to 133,236 tons of total news-print and 123,481 tons of standard news, which, for total news-print was 12 per cent. above the average for the five-year period and for standard news 15 per cent. above the average.

The production of news-print for August, 1922, compared with August, 1921, shows an increase, amounting to about 30 per cent. for both total news print and standard news. The production for August, 1922, compared with August, 1920, shows an increase of 3 per cent. for the total news-print and 5 per cent. for standard news. Compared with August, 1921, the increases are 17 per cent. for total news-print and 21 per cent. for standard news, and compared with August, 1918, increases of 17 per cent. for total news-print and 20 per cent. for standard news.

Mill stocks of both total news-print and standard news decreased during August, 1922.

MINDER (Soc.) seeks situation; Wharfedales and Platens; best Jobbing, etc.; 7 years' experience.—127, Leesland-road, Gosport. 14011

YOUNG MAN seeks situation as ASSISTANT MANAGER; good general knowledge of Letterpress Work, Colour Work and Binding; City and Guilds certificate, also Stationers' Hall Costing and Estimating.—Box 14015.

YOUNG MAN, with fair knowledge Book-keeping and General Office Routine, desires engagement; small salary accepted to commence.—Box 14010.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

CAXTON MACHINERY CO., 74, YORK STREET, GLASGOW; surplus plant; warranted good condition.—

Quad Royal, two-colour, Dawson and Sons, WHARFEDALE; flyers and gear'd inkers.

Double Demy, Payne and Sons, WHARFEDALE; large diameter flyer drum, band brake to cylinder, geared inking, full equipment, £300.

38-in. Self-Clamp "FURNIVAL" GUILLOTINE; two new knives, £130.

21½ by 16-in. "VICTORIA" PLATEN; four-inking roller, Model V., complete, perfect order, £200.

Several small Guillotines, Paging, Perforating and Platen Printing Machines, and Second-hand Wire Stitching Machines from 3/16th to 1½-in. 14013

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ½-in.—Box 13998.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,

Gray's Inn-road, London, E.C.1.
Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Miscellaneous.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

Average Price Paid by Publishers.

The weighted average price of contract deliveries from domestic mills to publishers during August, 1922, f.o.b. mill, in car load lots, for standard news in rolls was \$3.522 per 100 lbs. This weighted average is based upon August deliveries of about 50,000 tons on contracts involving a total tonnage of approximately 394,000 tons of undelivered paper manufactured in the United States.

The weighted average contract price based on deliveries from Canadian mills of about 30,000 tons of standard roll news in car load lots, f.o.b. mill, in August, 1922, was \$3.500 per 100 lbs. This weighted average is based upon the August deliveries on contracts involving about 122,000 tons of undelivered Canadian paper.

The weighted average market price for August of standard roll news in car load lots f.o.b. mills, based upon domestic purchases totalling about 10,000 tons, was \$3.643 per 100 lbs.

LOGO-TYPEWRITING.—A remarkable feature of a new typewriter announced from America (in *Popular Mechanics Magazine*) is that besides a single shift standard keyboard it has a set of twenty-two keys, each of which will print a whole word at a single stroke. The words selected are, of course, those of the most frequent occurrence and are all of one syllable.

ENTITLED "Elements of Lettering," a new book by Frederick W. Goudy has just been published by Messrs. John Lane The Bodley Head, Ltd.

Letterpress Dying Once More?

We give prominence in this issue to Mr. Gamble's Stationers' Hall Lecture and the discussion it aroused, as we believe the matter to be one of serious importance. Of course the prophecy that letterpress printing will definitely start upon its final decease in five years' time is highly debatable. If the compositor as we know him had fearfully accepted at their face value all the prophecies that have been made of his early departure from printerdom, he would long ago have trembled himself prematurely out of existence. As it is, however, the "comp" is very much with us still, and the activities of the London Society of Compositors are sufficient evidence that he is still very much alive. The experts who, from time to time, have warned the trade of coming "revolutions," have sometimes beaten the warning drum too vigorously or too soon, with the result that their drumming has perhaps lost something of its pristine power of striking terror into its hearers. It is when an advance is made from deductive reasoning and specious drawing-board plannings to actual demonstrations in steel and printed paper that printers feel it really is time to sit up and take notice. Is it not just this translation of theory into demonstration that the Robertson people are doing now? From what we have been able to learn of the matter and from a chat with Mr. Robertson himself—who, by the way, has been in London for a few days this week—we believe it is. But more anon. Meanwhile, we shall be glad to receive readers' opinions upon Mr. Gamble's prophecy regarding photo type setting, to which we shall return next week.

Question the Candidates!

In these pre-election days, when prospective M.P.'s lend so ready an ear to the grievances or aspirations of their constituents, it behoves printers everywhere to make good use of the opportunity of giving a lead to the future Parliament on those questions of public policy in which the printing trade takes a special interest. The Federation of Master Printers has very creditably been doing all in

its power to help local employers' associations to make the voice of the printing trade heard in the constituencies. We commend to the notice of our readers throughout these islands the Federation's suggestions on the subject printed on another page. Let every printer do his bit to get these questions ventilated now, for now is the time when Parliamentary representatives can most easily be made acquainted with the requirements of the printing industry and most easily be persuaded to promise the necessary support towards freer and more prosperous trade.

Strawboard Prices.

We are given to understand that strawboard prices have been withdrawn pending another jump. So much the better for British-made boards, which do not fluctuate according to continental conditions and the formation of ice. It is a matter for regret that some of the British mills which took up real strawboard manufacture during the war did not persevere in their efforts. Looking over some of the samples received from several mills during 1917 and 1918, one is surprised to observe how close we came to the foreign product when using straw as our basis. It was estimated then that over 1½ millions of straw were available in Scotland alone; and if this assessment was on the top side, there is certainly evidence that the tonnage of straw in the British Isles which finds no use apart from the limited provision of fodder is sufficient to afford a very ample source of good papermaking material, or, rather, board-making material. From the papermaking point of view, straw cannot compete with esparto; at least, that is so long as the esparto supply keeps up in tonnage and down in price. There is no certainty that such will always be the case, for esparto at its source is outside our control. The papermaking value of straw is illustrated by German practice, for one-tenth of the paper made there is said to be made from that material.

Boosting Print and Paper.

It struck us as a remarkable fact that at a recent Business Efficiency Exhibition no attempt was made to demonstrate the part which paper and print play in modern office organisation. Possibly this exhibition, like some others which are organised, was instituted solely for the interests of an alliance or association. However that may be, the omission gave rise to the thought that here at least is an opportunity for those in the trade who produce or print paper for modern systems or office stationery, not forgetting industrial organisations which work mainly on paper, to get together and demonstrate to the user the value of properly selected paper and its scientifically planned usage. This is, of course, a word on behalf of propaganda for increased consumption of print, a subject we have touched on several times lately. Apart altogether from this, there does appear to be an opening for an exhibition of this kind which would be devoted entirely to paper and print specialists, systems experts, and advertising designers. The term "systems expert" is meant here to apply, not to those with a machine to sell, but to the business organisers whose province it is to plan out industrial and office organisation.

South Africa and Paper Dumping.

The only paper mill in South Africa—the Premier Paper Mills, Ltd.—has been seriously perturbed owing to large supplies of paper, wrappings particularly, being offered on the South African market from various sources at prices alleged to be considerably below those ruling in the country of origin. We learn that regulations are to be enforced that will provide against future dumping into South Africa.

Personal.

THE Duke of York visited the printing works of Messrs. Waterlow and Sons on Tuesday, where he watched the process of printing his portrait.

A BARONETCY is to be conferred on Sir John James Baddeley on the occasion of his retirement from the office of Lord Mayor of London.

As a souvenir of the admirable way in which Lady Baddeley, the Lady Mayoress, has accomplished her duties as the official hostess of the City, she was presented at her last musical reception at the Mansion House, in the presence of a gathering numbering over 700, with a diamond brooch. Mr. Josiah Gunton (Chief Commoner) made the gift on behalf of the Corporation, and also handed to Lady Baddeley a pair of gold cuff-links for presentation to her husband.

SIR CHARLES HIGHAM has been appointed publicity adviser to Dunlop's.

MR. RONALD MCNEILL, new Under-Secretary at the Foreign Office, is well known to Fleet-street, chiefly through his prominent work for the *Pall Mall Gazette* and the *St. James's Gazette*.

SIR ARTHUR SUTHERLAND, Bart., of the *Newcastle Chronicle*, will preside at a dinner to be held on December 12th at Newcastle, organised by the North-Eastern District of the Institute of Journalists in aid of the Orphan Fund of the Institute. Lord Burnham, the proprietor of the *Daily Telegraph*, has promised to attend, and will make a special appeal on behalf of the Fund.

We are glad to hear that Mr. James Mac-Lehose, M.A., LL.D., has sufficiently recovered from his recent illness to be able to pay a visit to 24, Holborn, this week. He hopes to return next week to Scotland.

MR. T. P. O'CONNOR will preside at the complimentary dinner at the Hotel Cecil, on December 3rd, to celebrate the 40th anniversary of Mr. J. T. Grein's work as a dramatic critic. Mr. Carl Hentschel is active in organising the function.

MR. W. LEONARD TOD, President of the Papermakers' Association, will preside at the lecture which Mr. R. W. Sindall will give on November 10th at Stationers' Hall on "Paper for Books."

MEMBERS of the London Master Printers' Association who are Parliamentary candidates include Sir G. Rowland Blades (Epsom), Captain Gee, V.C. (Woolwich), Mr. A. E. Newbould (Leyton), Mr. E. E. Alexander (Leyton), and Mr. Frank Murrell (Weston-super-Mare).

SIR CHARLES STARMER, the managing director of the *Westminster Gazette*, and proprietor of the *Northern Echo*, the *Sheffield Independent*, the *Birmingham Gazette*, and several other provincial newspapers, is the Liberal candidate for the Cleveland Division at the general election.

SIR CHARLES E. MALLETT, who is contesting South Aberdeen in the Liberal interest, was formerly director of the publishing house of James Nisbet and Co., Ltd.

THE most attractive piece of Election literature which has yet reached us is a well-designed illustrated folder supporting the candidature of Mr. F. O. Roberts in the West Bromwich constituency. Mr. Roberts, previous to his election as member for West Bromwich in 1918, was in the employ of Messrs. Butterfield, Northampton, as a linotype operator. His candidature is officially promoted by the Typographical Association.

MR. T. P. O'CONNOR, the veteran journalist and Irish Nationalist leader, who is amongst the candidates returned unopposed, has retained his seat for the Scotland Division since 1885, having previously sat for Galway for five years.

OTHER unopposed candidates include Mr. Thomas Moles (Belfast, South), leader writer on the *Belfast Telegraph* and allied newspapers, with which he has been connected for twenty years, and Mr. R. J. Lynn (Belfast, West), editor and director of the *Northern Whig and Belfast Post*.

MR. EVAN S. AGNEW, who is contesting Holland with Boston, is a member of the firm of Bradbury, Agnew and Co., Ltd., proprietors of *Punch*.

THE Liberal candidate at Blackburn is Mr. Thomas Cox Meech, well known as a London journalist, occupying the position of London editor of the *Northern Echo*, the *Birmingham Gazette*, the *Sheffield Daily Independent*, and the *Nottingham Journal*.

MR. SAMSON CLARK, head of the well-known firm of advertising contractors, whose big new building has just been opened in London is contesting Chertsey in the Liberal interest.

MR. T. G. GRAHAM, of Newspaper House Fleet-street, one of the journalistic candidates, is putting up a plucky fight in Wall-send as a Free Liberal.

MR. ISAAC EDWARDS, leader writer on the *Bolton Evening News*, and the head of the fiction department of Messrs. Tillotson and Son, Ltd., publishers, Bolton, will contest the Bolton Division in the Liberal interest at the Parliamentary election.

MR. P. WILSON RAFFAN, Liberal candidate for Ayr Burghs, is a journalist, and formerly editor and proprietor of the *South Wales Gazette*, and manager director of P. Wilson Raffan and Co., printers and publishers, of Abertillery and Newport.

MR. A. E. HADDOCK, a life-long worker in the printing and stationery trades, was a successful candidate (Progressive) in the Finsbury Borough Council Election for West Finsbury Ward.

MR. FRANK COLEBROOK, F.A.I. was very cordially received on Tuesday evening, when he addressed the Printers' Managers and Overseers' (Parent) Association on "Fact and Fancy in Printing Valuation."

MR. ALLAN JEANS has been elected a director of the *Liverpool Daily Post*, the *Liverpool Mercury*, and the *Liverpool Echo*, Ltd.

MR. ERIC G. UNDERWOOD and Mr. H. W. Rapkin have been appointed joint managing directors of Thomas De La Rue and Co.

A DINNER was given on Monday at the Authors' Club, 2, Whitehall-court, in honour of Mr. John Bulloch, LL.D. (Aberdeen), editor of the *Graphic* and chairman of the Vernacular Circle of the Robert Burns Club of London, who gave an address on "The Scots Tongue in Life and Literature."

MR. E. H. HICKMAN, vice-president of the Drawing Office Materials Manufacturers and Dealers' Association, last week celebrated the 25th anniversary of his wedding, and to mark the occasion the council of the Association presented him with a handsome silver coffee pot.

MR. V. G. BOWER JACKIN, a member of the literary staff of the *Middlesex Chronicle*, has been the recipient of gifts from the proprietors and staffs of that journal on his marriage to Miss Winifred Clark, of Hounslow.

MR. L. G. S. GREEN, principal sub-editor of the *Derby Daily Express*, has been the recipient of a tea service from the directors, and a silver teapot and cream jug from the staff of that paper on the occasion of his marriage to Miss W. M. Hickson.

A NUMBER of paper and allied trade representatives are associated with the Fraternity Lodge of Freemasons, No. 4,032, Birmingham. Among the officers under the new Worshipful Master (Mr. H. J. Pratt) are Mr. A. Warner (Olive and Partington, Ltd.), secretary; Mr. F. J. Collins, D. of C., and Mr. E. Adams Taylor, S.D., both of whom are master printers.

Postal Rates for Diaries.

SIR,—Immediately the Postmaster-General announced his intention of excluding diaries from the printed paper rate of postage, The Diary Publishers' Association at once took action in the matter, and it is gratifying therefore to-day to hear from the Postmaster of his decision not to exclude diaries from the privileges of the printed paper rate for the present.

Yours, etc.,

THE DIARY PUBLISHERS' ASSOCIATION,
 18, Southwark-bridge-road,
 London, S.E.1., Nov. 7th, 1922.

The Life of a Pen.

SIR,—A movement is afoot to form a collection of pens and writing instruments of all ages—a collection which, it is hoped, may ultimately embrace some of the famous pens that have made history or indited the world's literary masterpieces.

The promoters are interested to gather information as to the relative "life" of the ancient and the modern pen—the durability, that is, of the reed, the quill, the steel pen and the more recent gold-nibbed reservoir pen.

As to the quill, its life was usually brief. Yet history records at least one instance when a single quill wrote the entire literary output of a prolific divine. This was Dr. Warner, the eighteenth century antiquary, author of no fewer than 44 volumes. His contemporaries dubbed him "Single-Pen Warner."

Can the modern pen beat that? By your courtesy, Mr. Editor, perhaps readers of this journal will cite their experience.

Mr. Max Pemberton, I understand, wrote all his more recent novels with a reservoir pen. Mr. Sydney Moseley, author of "The Truth about the Dardanelles," wrote that and eight other books with one and the same fountain pen. Mr. Herman Darewski used an identical pen when writing his most popular revues and songs, including "Sister Susie" and "Razzle Dazzle." But does any reader know of a quill, a steel, or a fountain pen that has been in continuous use for, say, ten years and upwards?

Yours, etc.,

ARTHUR PAGE.

Author's Club,
 Whitehall-court, S.W.1.
 Nov. 6th, 1922.

Mr. Robert Hilton.

An Urgent Appeal.

MR. J. R. Riddell, the principal of the London School of Printing, calls our attention to the distressing case of Mr. Robert Hilton, whom he found, at the age of 84, in dire straits both financially and physically.

Appealing to the printing industry on behalf of this deserving case, Mr. Riddell writes:

"Bob' Hilton has probably done more for the printing craft in general, and technical education in particular, than any other person alive at the present time. His cheery optimism and helpful criticism have always been at the service of those associated with technical education; therefore this appeal, although not confined to technical students and instructors, should have their special consideration.

"Allow me to appeal for immediate monetary assistance to tide this grand old man of the printing craft over a difficulty which is likely to submerge him."

Contributions sent to Mr. Riddell, London School of Printing, 61, Stamford-street, S.E.1, or to Mr. Hilton, 241, Glyn-road, Clapton Park, N.E., will prove most acceptable and will be little short of a godsend to Mr. and Mrs. Hilton, who have very few friends to turn to in their difficulties.

Mr. Riddell feels that if help is to be rendered, no time must be lost through waiting for an organised public appeal, which will no doubt come later.

AN international exhibition of photographic, optical, and cinematographic materials will be held at Turin in May and June of next year, says Reuter.

J. H. Pickford, W. F. Litty and G. F. Pickford, manufacturers of typewriting ribbons and carbons and dealers in office sundries, 7, Dyer's-buildings, Holborn, London, under the style of Commercial Office Sundries Co.; so far as regards W. F. Litty.

COMPANIES' (Consolidation) ACT, 1908.

FIRST MEETING.

Anglican Church Press, Ltd., 5, Green-street, W.C., creditors and contributories, November 16th, at 33, Carey-street, London.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

Walter Hamilton Hayes, 11, Denham-street, Chorlton-on-Medlock, advertising agents' manager, November 2nd.

P. N. Risky and Co., Ltd.

Official Receiver's Report.

The report of Mr. G. D. Pepys, official receiver, upon the liquidation of P. N. Risky and Co., Ltd., King's Arms Wharf, 53, Belvedere-road, Lambeth, S.E., has been issued by the creditors and shareholders. The winding-up order was made last March on a creditor's petition and a statement of affairs was submitted by Mr. Percy Nicolle Risky, a promoter and director, showing liabilities £49,179; assets valued at £3,700; and a deficiency of £57,941 with regard to contributories.

According to the official receiver's report the company was formed to carry on the business of wholesale paper and board merchants, importers and exporters, printers' and binders' engineers, etc. It was promoted by the London Waste Paper Co., Ltd, of which both Risky and Samuel Wood were directors, as, it is stated, that company was losing busi-

COOPER & BUDD LTD
HIGH-CLASS TRADE PRINTERS
McDERMOTT RD PECKHAM
Machines for Colour Work
Automatic Platen for High-class Job Printing
The Monotype for Fine Type-setting
We do not cater for "cut-throat" Printing

ness by reason of their competitors supplying new paper, which enabled them to more easily secure waste paper. The company occupied a part of the London Waste Paper Co.'s premises at Belvedere-road, Lambeth, at an annual rent of £1,000.

According to the company's accounts, the trading to June 30th, 1920, resulted in a net profit of £3,087 17s. 9d., the sales amounting to £78,585 4s. 11d. On this date, stocks amounting to £41,239 4s. 8d. were held. The following year (ending June 30th, 1921), resulted in a loss of £45,726 16s. 9d.; this loss, Risky explains, was due to the fall in market values of the heavy stocks which were held at the beginning of the year. The directors valued the stocks at 50 per cent. of the cost price. The purchases during the year 1920-21 amounted to £73,872 8s. 4d., and the sales to £71,885 4s. 3d. The stock on June 30th, 1921, was valued at £17,495 18s. 8d. No profit and loss accounts have since been prepared.

According to the statement of affairs filed by Risky, the gross liabilities are estimated to amount to £49,179 15s. 11d. The amount due to unsecured creditors is returned at £45,031 2s. 3d., of which £18,165 7s. 3d. is due in respect of loans to the company, including an overdraft of £5,135 6s. 3d. on the company's banking account, repayment of which is guaranteed by Risky and Wood, and sums of £3,238 2s. due to Wood and £1,913 18s. to Risky. The assets are estimated in the statement to produce £3,779 6s. 11d., but in the opinion of the official receiver, book debts, estimated to produce £2,269 7s. 4d., are not likely to realise that sum.

The failure of the company is attributed by Mr. Risky to loss on realisation of heavy stocks held in June, 1920; to damages sustained in respect of contracts which the company was unable to carry out, and to bad debts.

The Court has appointed Mr. Frederick Rowland, C.A., 70, Queen Victoria-street, E.C., as liquidator, and the official receiver intimates that all communications regarding the realisation and distribution of the assets should be addressed to that gentleman.

Paper Contract.

In the King's Bench Division, recently, before Mr. Justice Rowlatt, an action was brought by Mr. Walter Stockdale, paper merchant and printer, of Brookfields Mills, Glosop, against the Parsons Trading Co., Fleet-street, London, and New York, to recover for an alleged breach of contract by the defendants as sellers to the plaintiff in April, 1920, of 50 tons of vegetable parchment paper in two sorts f.o.b. New York. Plaintiff said that the quality was bad. Defendants denied liability.

Mr. Atkinson, K.C., and Mr. Lowenthal were for the plaintiff and Mr. Jowett, K.C., and Mr. Lane and Mr. Wishart were for the defendants.

Mr. Atkinson, K.C., said that the action arose in regard to deliveries made under the contract. The case related in particular to a question of whether the goods delivered were according to the contract, and if not, what damages had resulted. The plaintiff used a good deal of the paper before the faults were discovered. The plaintiff's case was that the paper in bulk did not correspond to the outturn sheets and that instead of its being a good white colour, it was of different shades and had black specks. The paper in question ordered by plaintiff was of the kind used for wrapping up and preserving food—the sample was of good white colour without flaws. Plaintiff wanted 50 tons, and apparently the New York house of defendants were in difficulty about supplying such a quantity and the correspondence seemed to suggest that they were in fact telling defendants that they could only deliver that quantity in inferior stuff. The defendants made a delivery about November, 1920, and it was not until some time after that plaintiffs had disposed of quantities of the paper that the faults were discovered. Mr. Atkinson explained that the outturn sheets were regarded as reliable and plaintiff did not discover the bad quality until his own customers complained to them. Plaintiff then wrote that the paper contained black spots and was of different shades and the parcel was of "no use whatever." The defendants replied that if the mill was found to be at fault, they would investigate the matter, but they could not see why no inspection was made by plain-

tiff. In further correspondence plaintiff complained of "spottiness" in the paper and suggested it looked more like an imitation sulphite parchment than a vegetable parchment and they stated that it could not be used for wrapping foodstuffs.

The witnesses for the plaintiff's case included Mr. William Tingey of the firm of Tingey, Bardsley and Co., of Manchester, paper importers, who said that he had examined the out-turn sheets in this case and the bulk. The bulk did not compare with the out-turn sheets and the sample. The bulk showed spots from surface grit and there was variation of shade. It was not a good delivery. In November, 1920, the market price according to sample was 1s. 7d. per lb. For this bulk he would have considered giving 7d. The paper could not be sold for the purposes for which it was intended. Good white colour was an essential in parchment paper.

Cross examined by Mr. Jowett, he could not quote a case of sale at 1s. 7d. at the date mentioned. About October and November, 1920, American stuff was coming and some paper from the Continent. It was rather difficult to get purchasers in October. In January, 1921, he sold paper of this quality at about 1s. 7d. He had not sold above a ton at a time since the war. He supplied paper merchants only.

Witness agreed that the sample produced (upon which the paper was sold) had black specks. It was a good paper at 1s. 7d. per lb. The out-turn samples were also good.

Counsel: The complaint about the bulk is the variation in shade and the black specks.—Yes, but I say as a grease-resisting paper it is rather good.

Would you be surprised to hear that the tests give a better result for the bulk than for the out-turn samples except as to variety of shades?—The quality is as good, speaking apart from the colour.

Mr. John Lockett, paper importer and exporter of Manchester agreed the bulk was not equal to the sample. Mr. Lockett said the paper was rainbow-like.

His Lordship: He says it is like rainbows as seen in Manchester. (Laughter.)

Later in cross-examination witness said the paper might have been used for wrapping up fish and chips.

Mr. Jowett: There is a big demand for fish and chips in Manchester. (Laughter.)

Witness: Yes, but I don't take them myself.

At the close of plaintiff's case, Mr. Jowett, K.C., for the defendants, said he felt doubt about the desirability of calling evidence. It was obvious there was a variation in shade and he admitted it, but he did not think there was any substantial variation in quality. As to damages, Mr. Jowett argued that 1s. 7d. could not be taken as the market price at the time as a basis for damages.

His Lordship said he was satisfied that in colour this paper was a job lot. He gave the plaintiff judgment based on a difference in value of 11½d. Judgment was entered for the plaintiff for £714 and costs.

Erinoid, Ltd.

Substitute for Specially Prepared Paper.

Although no dividend was declared at the annual meeting of Erinoid, Ltd., held in London on the 31st ult., Mr. Andrew Binnie (chairman of the company) emphasised the company's financial vitality, and described the outlook as bright. The chairman explained that they had, until recently, in their process used a large quantity of specially prepared paper. They carried a large stock, lest their factory be brought to a standstill. Their resourceful manager had recently found a more economical substitute for this special paper, and the saving in less than a year would outweigh the loss on the stock and provide an annual saving in future. In reference to manufacturing in France, the company had invested £11,000 in cash in the Omnith Co.

ADVERTISING PAYS!—Several members of the executive committee of the North Wales Advertising Board, which met at Bangor, declared that the Press continued to be unquestionably the most effective advertising medium. It was decided to instruct the advertising sub-committee to apply two-thirds of the Board's income next season to Press advertising.

An Advertisement is always working.

Printers' Managers and Overseers ASSOCIATION.

The first Bohemian concert of the Liverpool Printers' Managers and Overseers Association was held at the Angel Hotel, Dale-street, on Saturday evening. The president, Mr. Charles Mackie, was in the chair, and there was a large attendance. The varied programme given by Mr. W. H. Hill's "Scamps Concert Party" was excellently rendered, especially the concerted items. Miss Mona Sims and Misses Mills and Christian were deservedly encoored, and Mr. Don Johnson and partner furnished the chief turn of the evening.

Election Printing: A Warning.

In view of the rush of executing orders for election printing, the Federation of Master Printers is reminding its members of the stringent laws regarding imprints on this particular form of literature. Everything printed and issued having reference to a Parliamentary, municipal or other election must, under severe penalties, bear in legible characters on the face of it the name and address of the printer and of the publisher.

ASSOCIATED NEWSPAPERS SHARES.—The deferred shares of the Associated Newspapers Ltd., were introduced to the market on Monday. The opening quotation for these £1 shares was about £6 5s., and there was rapid improvement in the price at first until the quotation reached £7.

THE PRINTERS' PROVIDENT ASSOCIATION

Founded 1910.

Phone: Hol 537.

A FRIENDLY SOCIETY FOR THE PRINTING AND ALLIED TRADES

The Association provides Benefits for those engaged in the above trades consisting of—

Unemployment Benefit.

An allowance of 22/6 per week for 20 weeks in the year. State Benefit paid through the Association in addition. Employment Registry Conducted.

Funeral Benefit.

A Benefit of £20 payable at death through any cause after one year's membership. One-third may be claimed on the death of a Member's wife. No Medical Examination.

Superannuation Benefit.

An allowance of from 6s. to 10s. per week for life according to number of years' membership on claiming.

The Subscriptions are lower than those of any similar Society. There are no Levies or Fines. Members are accepted up to 55 years of age. Females applicants are welcomed. Membership includes Clerical Workers, Salesmen, Stationery Assistants, Compositors, Machine Minders, Readers, Lithographers, Operators, Rulers, Cutters, Overseers, etc. Further particulars and Application Forms may be had upon request.

Secretary and Registrar Offices:

STANLEY G. C. JACOBS.

Trade Notes.

FOR the 95th Anniversary Festival of the Printers' Pension Corporation on the 15th instant under the presidency of the Duke of York, every available seat has been reserved and no more tickets can be issued.

COLONEL TRUSCOTT's appeal on behalf of the Printers' Pension Corporation is meeting with a satisfactory response. We hear that over £600 has already been subscribed, and it is hoped that further amounts will be forthcoming in time for inclusion in the list to be presented on the 15th.

THE Federation of Master Printers is inviting its members to submit designs for a new Federation emblem.

MEMBERS of the South-west London Master Printers' Association, under the leadership of Mr. J. D. Wise, on Monday paid a visit to the Croyley Mills of Messrs. John Dickinson and Co., Ltd. The visitors spent an interesting time inspecting the various operations of papermaking and were entertained to tea.

A NEW costing campaign in London was opened at a meeting held on Tuesday evening at the Westminster Central Hall under the auspices of the S.-W. London Master Printers' Association. Mr. J. D. Wise presided, and Mr. A. Williamson, the Federation costing secretary, was the principal speaker, Mr. Howard Hazell being absent through illness. An interesting discussion followed Mr. Williamson's address.

ON Thursday last the *Morning Post* completed an existence of 150 years, the first number having been issued on November 2nd, 1772.

IN the action for damages for alleged libel brought by Mr. James Malcolm Monteith Erskine, who was M.P. for St. George's, Hanover-square, in the late Parliament, and who is again standing for that division, against Messrs. J. H. Johnson, Ltd., the printers and publishers of the *Westminster Record* and *West London News*, and Mr. A. J. Tydeman, secretary and agent of the St. George's, Hanover-square, Conservative Association, the jury assessed the damages at £2,500, and judgment was entered accordingly with costs. Notice of appeal was served.

AT the annual dinner of the publishing department (night staff) of *The Times*, held at the Bedford Head Hotel, Maiden-lane, W.C., a presentation was made by the chairman, Mr. F. G. Owen, Father of Chapel, to the late Fathers of Chapel, in recognition of their services during their terms of office.

THOMAS JAMES COTTER, printer, was fined 10s. at the Liverpool Police Court for having printed some slips which did not bear his name and address, the Stipendiary remarking that the offence was merely technical.

NUMBERING CURRENCY NOTES.—The Treasury states that new numbering machinery is being used for 10s. currency notes, commencing with those bearing the serial letter "J," and will be used for all 10s notes bearing that and later serial letters.

MUSIC TYPEWRITER.—After experimenting over a period of 12 years, Professor Fortoni (leader of the orchestra at Princes Restaurant) has invented a music typewriter. The machine can print directly on a transfer paper, and by this process thousands of copies of a new work can be supplied the same day. It will also transpose mechanically into any key.

IN regard to the new registration announced in our columns last week, we understand that Hambleton Properties is an unlimited company formed for purely private reasons for dealing with the properties owned and occupied by Lord Hambleton and Messrs. W. H. Smith and Son. There will be no public issue of shares. No change is involved in the proprietorship, conduct or name of the huge business of W. H. Smith and Son. The business remains, and will continue to remain, a private family concern, as it has been for well over 100 years.

THE King and the Prince of Wales, whose interest in stamp collecting is well known, have accepted sets of the first impressions of the new postal franks produced by the Universal Postal Franking machine now being introduced into the British postal service.

At Harmer, Rooke and Co.'s Fleet street auction rooms, £60 was obtained for a rare Baghdad Occupation stamp.

EMPIRE EXHIBITION.—Already the guarantee fund for the British Empire Exhibition at Wembley has reached £1,190,000, but the committee (of which the Prince of Wales is president) hope to see this sum more than doubled, in order that their hands may be strengthened in this great enterprise for the development of Empire trade.

A BIG success is anticipated for the Photographic Fair of 1923, which will be held at the Holland Park Hall from March 15th to 24th.

AMONGST firms recently elected to membership of the Federation of British Industries are the following: Ed. J. Burrow and Co., Ltd., printers of illustrated handbooks, etc., Imperial House, Cheltenham, and 93, Kingsway, London, W.C.2; Cornbrook Chemical Co., Ltd., manufacturers of lake colours, pigment colours, colours for printing ink, etc., Newbridge Mills, Stockport; Greenfield and Co., Ltd., manufacturers of cardboard boxes—hand covered, machine covered, wire stitched, etc., Dickinson-street, Salford, Lancs.

RAILWAY RATES.—Speaking at the quarterly meeting of the Association of British Chambers of Commerce at Leicester recently, Sir Arthur Shirley Benn, M.P., said they could not expect the railway companies to give a further general reduction in goods rates all round for, say, twelve months from August last, they did consider that in the case of traffic such as coal, iron and steel trades some further reductions might at an early date be granted to assist those particular trades and others which depended on them.

M. ALFRED CAPUS, political editor of the *Figaro*, died on Wednesday of last week. He was a brilliant journalist, and was president and one of the original founders of the *Maison des Journalistes*.

THE death has taken place at Bury of Mr. William Law, aged 69, who for over 40 years was employed at Messrs. Wrigley's Paper Mill, Heap Bridge.

MR. W. L. ROSSITER, formerly in the service of Charles Morgan and Co. for 44 years, and pensioned when the new company was formed in 1919, who has since that time been living at The Red House, Kessingland, near Lowestoft, died suddenly at that address on October 4th.

MR. T. J. COBDEN-SANDERSON, of Hammer-smith, founder of the Doves Bindery and Printing Works, left £12,988.

THE late Mr. Stephen Leslie Pewtress, of 51, Old Bailey, E.C., wholesale and export news-agent, died July 5th, left £7,893.

PRINTED BOOKS EXPORTED.—The exports of printed British books for the nine months ended September reached a total quantity of 199,923 cwts. (of the value of £2,311,279). These figures compare with 209,532 cwts. (£2,625,650) in the corresponding period last year, and 211,716 cwts. (£2,700,899) during January to September of the preceding year.

THE American Publishers' Association has issued a warning to members asking for 10 per cent. reduction in news-print consumption.

THE larger newspapers of the Dutch East Indies import their supplies of printing ink, as well as news-print paper. The smaller papers, including the Chinese and native press, obtain their requirements through jobbers.

THE Stationery and Printing Company to be run on up-to-date lines by the Shanghai Commercial Press under the supervision of the Shantung authorities, has now opened in Tsinan.

THE PRINTERS' PROVIDENT ASSOCIATION, 39-40, SHOE LANE, E.C.4, was founded in 1910 and is approved by the Minister of Labour under the Unemployment Insurance Acts. Its benefits include unemployment pay, funeral allowance and superannuation for those employed in any branch of the trade. Its fees are moderate and its benefits substantial, thus, the unemployment benefit of £1 2s. 6d. for 20 weeks in a year is provided for a subscription of 7d. per week and the State Benefit is paid through the Association in addition instead of through a labour exchange. It is purely a benefit society managed by a committee of employers and employees which does not interest itself in trade disputes, and employers in recommending the society to their staff have this assurance. It conducts an employment registry and is in a position to supply efficient labour at the shortest notice. The secretary will be pleased to send a full prospectus.

AT the present rate of consumption Poland uses 113,400 metric tons of paper annually. The production of the Polish paper mills in 1921 amounted to only 36,000 metric tons. Polish engineers are advocating the use of more modern machinery.

THE Bömisch-Kamnitz Paper Mills, Czecho-Slovakia, are paying a dividend of 20 crowns, with profits of 1,303,173 crowns, and the Olleschan Co. a dividend of 18 per cent., with profits of 3,142,300 crowns.

AMENDMENTS have been approved to the first and second schedule to Customs Duties Ordinance of Trinidad. Printing paper (for newspapers) and wrapping paper bear a British preferential tariff of 5 per cent. *ad val.* and a general tariff of 10 per cent. *ad val.* All other kinds and manufactures of paper bear a British preferential tariff of 10 per cent. *ad val.* and a general tariff of 20 per cent. *ad val.*

Trade Union Matters.

HUDSON AND KEARNS' AWARD.—Settlement has been reached by arbitration in the dispute at the warehouse of Messrs. Hudson and Kearns, Ltd., in regard to the employment of women for warehouse work. The firm and the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers (London Central Branch) agreed to submit the matters at issue for settlement to the Conciliation Committee of the London Chamber of Commerce, which body, we understand, decided that Messrs. Hudson and Kearns, Ltd., were within their rights in employing female labour in certain warehouse work in connection with the production of the *Field and Queen*.

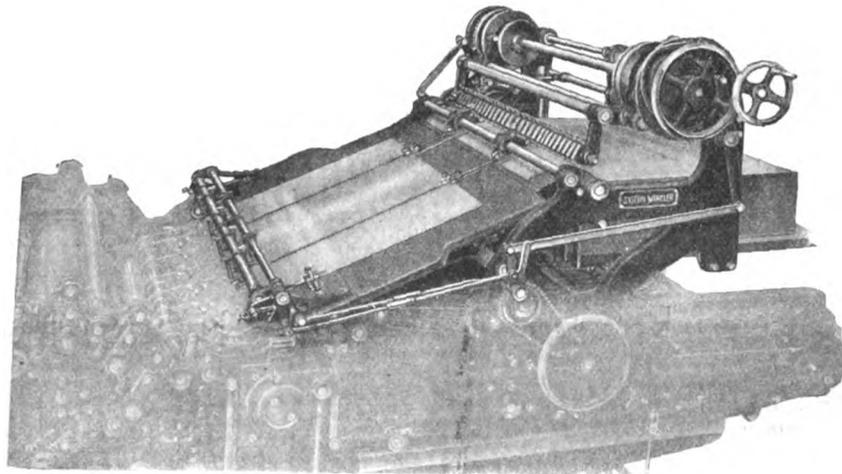

THE London conference (to which we referred last week) on the question of demarcation between male and female labour in bookbinding departments was between the Rulers and Vellum Binders section of the London Master Printers' Association and the National Union of Printing Bookbinding, Machine Ruling and Paper Workers. As a result of the conference, we understand, certain proposals are now under consideration by the union with a view to modification of the present severe restrictions.

RECIPROCITY SCHEME.—The reciprocity scheme between the Typographical Association and the London Machine Managers' Association has been completed. Under the scheme the London Machine Managers' Association will have control for a radius of 15 miles from the City G.P.O., and the Typographical Association outside that area.

NEWRY LOCK-OUT.—The lock-out of the Typographical Association members at Newry, Ireland, has entered into the fourth week without any settlement being arrived at. Three firms are affected. The cause of the dispute is an attempt to reduce wages by 16s. per week.

THE WORLD'S CHEAPEST AND MOST EFFICIENT (FOOL PROOF) MELTING POT.
No Depreciation after TEN YEARS' Working.

FINSBURY, E.C.2.

Time is money!

THE Winkler Automatic Sheet Feeder

will save you both.

Built in all sizes
and can be fitted
to any letterpress
or litho machine.

Can be seen
 running in
 London. —

INTRICATE mechanism is superseded by simple movements.

Fitted in its entirety on the machine, so that access to the latter is not impaired.

Works in unison with the machine and at variable speeds up to 2,400.

Feeds all kinds of paper from thinnest tissue to cardboard.

Register is assured even at high speed.

Adaptable for very short runs.

Quick changing from small to large sizes and vice versa.

Changing to hand feed in a few minutes.

Purely mechanical automatic throw-off when the paper feed is disturbed

No tapes or friction wheels to smear the sheets, and freshly-printed matter can be at once backed-up without the risk of marking or smearing.

Is Typographical Printing Doomed?

Mr. W. Gamble Rouses Keen Discussion amongst Central London Master Printers in respect of Revolutionary Process Developments.

The Association of Master Printers of the London Central Districts opened their winter session most auspiciously on Wednesday of last week with a lecture (fully reported on another page) by Mr. William Gamble on "The Influence of Photo-Offset and Rotary Photogravure on the Future of Letterpress Printing." Held at Stationers' Hall, the meeting was exceptionally well attended, a salient feature being the large proportion of printing trade notabilities in the audience. Amongst the many well-known people noticed were: Sir Cecil Harrison, K.B.E., Mr. R. A. Austen-Leigh (president, Federation of Master Printers), Mr. A. E. Dent (secretary, Federation of Master Process Engravers), Mr. Edgar L. Waterlow, Mr. A. E. Goodwin, Mr. W. Whyte, Mr. A. Williamson, Mr. W. M. Bower, Mr. Frank Heywood, Mr. G. W. Mascord, Mr. H. R. Eason, Mr. R. B. Fishenden, and Mr. Bertault, whilst Mr. J. D. McAra, F.C.I.S., who performed the duties of chairman with customary ability, was accompanied by Messrs. W. H. Burchell and W. J. Boyle (joint secretaries, Central District), Lieut.-Col. Hooper, and others of the executive.

Mr. Gamble much enhanced the interest of his lecture by displaying for inspection a remarkable collection of examples of work done by a great variety of processes.

The chairman, in welcoming the visitors, made special reference to the presence amongst them of Mr. Charles W. Cox, master printer, director of the Cox, Kay Pty., Ltd., of Hobart, Tasmania, the reference evoking a cordial response from the meeting.

Mr. Gamble was forthwith called upon to deliver his lecture, his remarks being followed with keen attention, and an ovation being given him at the conclusion.

When the chairman declared the meeting open for questions and discussion, there was some hesitancy in making a start, but Mr. Goodwin readily responded to a request to "break the ice."

Mr. Goodwin recalled his pleasure in listening to Mr. Gamble's address at the World's Printing Trades Congress, and said that unfortunately the Congress was held at the time of the railway strike, otherwise a good deal more interest would have been shown in Mr. Gamble's remarks on that occasion. He thought Mr. Gamble had then prophesied that this revolution would take place at a very early date, but he did not know there was sufficient evidence that matters had developed quite so quickly as Mr. Gamble had anticipated at that time, and he was not quite sure Mr. Gamble would be prepared to state that in five years this revolution was going to make quite the advance that some of them might fear. It was, however, vastly important that the matter should be ventilated by experts on the technical side. When the linotype and monotype machines were being introduced, a good deal more interest was shown by the provinces than by London. And now they had to look to Blackpool for the most marked advance yet made in photo-offset production, though there was a good deal of experimenting being done in London printing offices.

Photogravure Election Poster.

Mr. Burchell said he would have liked to hear something about the application of photogravure and offset to the printing of postage stamps and bankers' cheques. He took it that the step-and-repeat process would show an advantage in that class of work. Perhaps Sir Cecil Harrison could give them some enlightenment. He thought letterpress printers would have to get in offset or photogravure. Only a day or two ago he had had an eye-opener—a double crown portrait poster for election purposes being produced by offset at a price quite out of comparison with that of half-tone.

A member requested further information as to the justifying of the glass letters which Mr. Gamble had mentioned.

Mr. G. W. Mascord recalled something of his experiences in pioneer work connected with the introduction of half-tone engraving and other processes. He mentioned that quite by coincidence he had sitting by him that evening Mr. Charles Shugg, of Melbourne.

He thought Mr. Shugg and himself were amongst the first to introduce the half-tone process into Australia. After touching further upon his Australian experiences he indicated that he thought Mr. Gamble too sanguine as to the effect of the photo processes upon present-day methods, especially in respect of newspaper work, which had to be done with marvellous rapidity. He did not agree that there would be displacement of present methods in five years. The question of corrections, manipulation of master matrices, etc., was a vital matter which had not been sufficiently thoroughly dealt with. However, the wonderful results shown pointed to Mr. Gamble's predictions being realised sooner or later. Magazine and jobbing printers would be the first to reap the benefits of the new methods.

Mr. Shugg made further reference to early experiences of process work in Australia, including zinc etching, the gelatine process and the producing of half-tone blocks by the use of screens of wire gauze, linen gauze and perforated zinc. He thought Mr. Mascord printed the first half-tone ever done in Melbourne. He (Mr. Shugg) had derived a great deal of pleasure and assistance from Mr. Gamble's writings. He was now over here to learn what there was to be learned of the new methods in photo-litho. He had no fault to find with what Mr. Gamble had said that evening; he was only thankful to have the pleasure of being present.

Another speaker inquired whether, by the offset litho process, one could print three-colour work on the same lines as with process blocks.

Limitations of Offset.

Mr. Eason, who said he had very much enjoyed the lecture, referred first to Mr. Gamble's mention of duplicating a plate which was part of a colour set; he was interested to know what Mr. Gamble had in mind. He thought offset was going to be the greatest of our reproduction processes. In offset, however, we had not yet attained the perfection in negative-making and production on the metal that had been achieved in half-tone. Fine etching was very difficult to dispense with, the deepening of the dark portions and the lightening of the light portions to get the requisite contrast. The difficulty with monochrome reproduction would doubly or trebly pertain to colour reproduction. But the offset printer did not expect to get the same result in three printings as he would get with colour blocks, because of the difference in brilliancy of the images. He thought a great deal was due to softening-down from the rubber, also due to the paper, as with matt-surface paper one could not expect the brilliancy obtained on paper made on purpose to keep the impression on the surface. The process must be chosen to suit the work. With regard to photogravure, it was plain from the beautiful present-day newspaper supplements and publications entirely by photogravure, that the process was no longer in the experimental stage. It had come to stay. Printers must follow the trend of events or they would be left behind. But though photo processes were suitable for some purposes, the tendency with a new process was to rush to do everything by it. As for photo type-setting, he thought Mr. Gamble might be right in predicting five years as the period for its being brought to perfection.

Photo Type-Setting Questioned.

Sir Cecil Harrison, who commenced by saying he was not in a position for the moment to explain fully the technical methods of stamp production and to recommend the one he thought best, remarked that he was one of the unfortunate printers peculiarly bound up in the old method of printing from type. He was afraid that amongst all the printers in the room there was none who had the misfortune to have such a quantity of metal in various stages in his office. So that seding printing from type, he trembled with fear. (Laughter.) He realised that something could now be done in the direction of setting type and photographing it for photogravure or offset, but he gathered that Mr. Gamble's

predictions of the complete or large supersession of type were founded especially on machines the details of which had hardly been indicated—machines which might or might not be partially invented and which were to produce type matter without type. He could hardly conceive what was the nature of machines which would produce letterpress matter more rapidly and more cheaply than the present-day type-setting machines.

What Photo Processes are Doing.

Mr. Fishenden said that whilst they must all agree that photo typesetting would come—and he thought it would come as quickly as Mr. Gamble anticipated—there appeared to be very big developments coming immediately in the replacement of letterpress methods by offset, particularly in respect of reprints. Mr. Gamble had mentioned the Manul process, and there were other similar methods being worked out at the present time. He believed some of the Scottish printing houses already found it extremely economical to produce reprints of novels and the like by offset methods, using one or other of these reprint processes which enabled a finished reprint edition of a novel to be produced more cheaply by offset than by letterpress, even if the stereo plates of the first edition were in existence. With regard to high-light methods, a tremendous amount of development had already been achieved, and he did not agree that it was not practicable to obtain the richness, strength and vitality in a high-light result that could be got with a block. When the process was properly understood the final prints by offset—with no fine etching whatever—far exceeded in richness and intensity those produced by the ordinary half-tone block. With regard to colour, he had found it possible to produce by five printings, with a purely automatic process of photographic colour selection, results perfectly suitable for any ordinary run of commercial colour printing. With reference to dry lithography, this appeared to be a development applicable to certain classes of work, coming more into line with ordinary letterpress printing. It was possible, if there were no very extensive whites in the subject, to etch an ordinary litho plate into relief and, by reason of the fact that one was handling a thin metal plate instead of a thick plate such as used for blocks, bend it round the cylinder of the offset machine and print at the ordinary running speeds of offset. One of the great advantages attaching to the use of photo offset and photogravure for high speeds was the definite practical possibility of using fine grain screens (invisible or scarcely visible) as was entirely impracticable in the ordinary run of letterpress printing.

Mr. Owen-Jones mentioned that the full specification and drawings relating to the Robertson patent for photo typesetting had now been published and were obtainable at the Patent Office. He had been amazed to find how the difficulties encountered had been overcome by the patentees. There were wonderful ingenuity and skill behind these inventors, and financial backing also.

A questioner asked how half-tone illustrations could be included in photo-set type matter.

Mr. Dent said he thought the lecturer had stated that photo-litho offset and rotary gravure were not so applicable to jobbing work as to newspaper work and long runs. He would like that emphasised, as the production of a cylinder might be all very well for a big run of one publication, but how would these processes apply to jobbing work, with comparatively small runs and with different coloured inks and different weights of paper?

Mr. Boyle asked if it were not a fact that the last miniature edition of the Encyclopædia Britannica was produced by process.

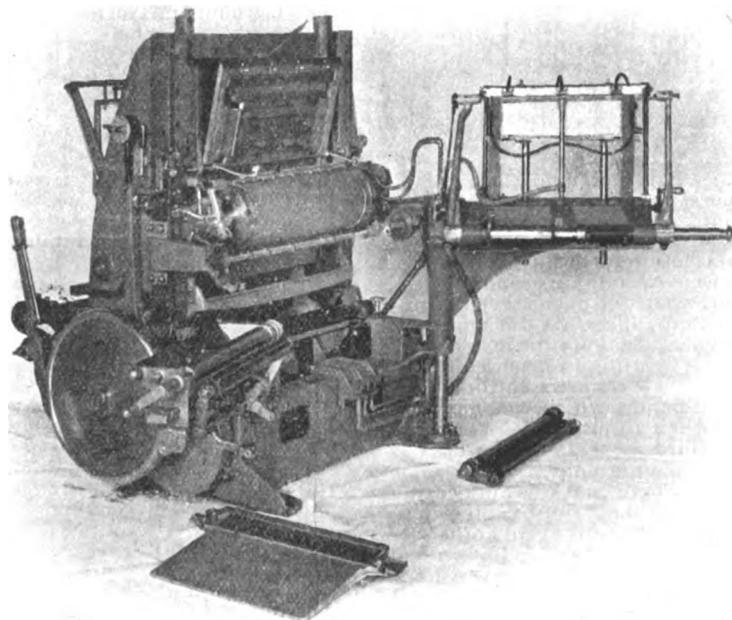

Mr. Gamble Replies.

Mr. Gamble, being called upon to reply to the points raised in the discussion, dealt with them seriatim.

In regard to the printing of postage stamps and cheques, he said that as Sir Cecil Harrison had not vouchsafed information it would perhaps be improper for him to go into the matter. He might say, however, that a great deal of such work was being done by rotary gravure. It was, he thought, no secret that our Treasury notes are being printed by rotary photogravure, whilst the Bank of England is also doing something with the same process.

As for the justifying of lines in the photo type-setting process, he could not conceive that the photographic squeezing-in of a long line or the expanding of a short one could

The . . .
American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme: showing also pile-table and fountain swung back and forme roller unit removed from Press.

SPECIFICATION.

Inside Chase Measurement, 13½ in. × 19½ in.
 Type matter locked in chase, 12½ in. × 19 in.
 Largest sheet which can be delivered,
 12½ in. × 19 in.
 Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.
 Over-all Measurements:
 Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
 Net weight, with motor, approximately 2,600 lbs.
 Speed Range 2,000 to 3,600 per hour.

* *

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its effective time by reason of the enormous reduction in the time required to change from one job to another.

We invite you to call and see the Vertical Press at work.

give sufficient uniformity—in respect of which the eye is very sensitive. In photo line methods the spacing-out was done in an entirely different way, by expansible spacing, as in linotype and monotype.

Mr. Mascord, he said, seemed rather pessimistic in regard to the five years' limit. His (Mr. Gamble's) meaning was that it would take about five years to bring the apparatus to something like perfection, and from that date onwards progress would be made. It might take a quarter of a century before it attained to anything like the degree of perfection of the present-day linotype and monotype.

Mr. Shugg had made interesting reference to the old swelled-gelatine process. Announcement had been made recently of a new German process claiming to produce half-tones at one-tenth the present price and to do them in 15 minutes. That process did not seem to have matured. Another German worker had done something better. He (the speaker) had received a block made by gelatine process—i.e., with gelatine printing surface. An example of printing from gelatine would appear in the next issue of "Process Work."

As for three-colour work by offset, it is certainly being done, but it is generally found in practice that it is better to give four, five or six colours, the usual plan being to give three colours, then one extra red and one extra blue.

In reply to Mr. Eason's query: it was quite possible to prepare a duplicate plate by means of stepping methods. One method now used in America was to have a transparent sheet on which an impression is taken of the first plate, or there are guide lines by which the work can be laid down. Other kinds of apparatus did it by means of mechanical scales.

Replying to Sir Cecil Harrison, Mr. Gamble maintained that the photo typesetting machines would work more quickly than the typesetting machines now in use. One respect in which time was saved was in the casting process. The speed of the photo machines should be practically the same as the typewriter, because the striking of the keys merely involved making an exposure and moving the film one step for the next line.

In regard to Mr. Fishenden's remarks, Mr. Gamble said that one disadvantage of the Manul process was that it was limited in respect of size; he did not think it possible to apply it to large sheets. Another drawback was that it is sometimes difficult to get uniformity; one film might be a little more dense than another, so that the pages of a book printed by the process proved to be not exactly the same colour—though the average reader was not critical on that point.

As to the insertion of half-tones in text matter, that was quite easy. By drawing a slide one drew aside the screen when doing the text, and pushed it in when doing the half-tone.

Regarding the point made by Mr. Dent, it was quite true that it might be too costly to make a cylinder for a small job but there were methods by which a small job could be put on a cylinder that had a lot of previous jobs on it, and only the last job need be printed. By that method it might be possible to do even small jobs economically, whilst there were sheet-feeding machines which enabled one to deal with any thickness or size of paper.

Mr. Boyle was right about the Encyclopædia Britannica; the miniature edition had been done entirely by photo process. It was

produced by a firm in Chicago, and no doubt the plates would be sent over here for the reprint in this country.

The meeting was brought to an end by the chairman expressing to Mr. Gamble the appreciation and thanks of the audience, whose endorsement of these sentiments was made plain by another very cordial ovation.

Setting Type Without Type.

Addressing the members of the Edinburgh Rotary Club at their weekly luncheon on Oct. 26th on "Modern Developments of Printing," Mr. W. B. Hislop said that, going back to the beginning of last century, they would find printers using type very much the same as they used to day. In those days printing was a leisurely business, and the illustrations were wood-cuts and plates. These, however, went out of use when printing was speeded up. The first development was an entirely new class of printing, known as lithography, or printing from perfectly flat surfaces. Later, there came the introduction of the rotary principle, which was now the method adopted for all printing done at fast speeds. The third development was the application of photography. It did not strike the ordinary man that this application of photography to the printing press had made a greater difference than any other development. Regarding the development of type setting, Mr. Hislop said, before very long, perhaps next year, they might have a machine which would set up type without using type at all. That might sound a little Irish, but this might mean a revolution in printing. They had heard a good deal about broad-casting, but broad-casting would never replace printing.

French Paper Market.

English and Americans have been buying enormous quantities of rags from France, so that prices have risen. One firm has inquiries for the supply of 1,000 tons of rags per week. Wood pulp has also risen in price quite lately, this being also ascribed to English and American buyers.

Italian mills export considerable quantities of straw paper to France and Belgium also printing paper, but prices of the latter have been increased 10 per cent.

It is said, says *La Papeterie*, that Czechoslovakia is making preparations to flood the French markets with paper.

The Amalgamated Photographic Manufacturers (of which Mr. A. E. Parke, of Wiggins, Teape and Co., is chairman) has decided to reduce the capital by £170,000. The company was formed to combine a number of firms whose productions cover practically the entire range of goods needed by photographers. Considerable economies have been effected both in administration and factory charges, the new roll-film camera establishment at Leeds is now producing, and the reduction in postage tariffs should stimulate the post card trade.

Italian Printing Ink Trade.

The Italian Custom duties on inks are imposed with a view to protect home manufacture, which is considerable. Prohibitive duties have greatly interfered with French exports to Italy, which during the war had replaced German and Austrian products, says *Chimie et Industrie*. Owing to their debased currency, these old purveyors to Italian markets have returned, and now compete with local manufactures in spite of the high import duties.

France retains her high rank for printing inks, but will have to watch German competition. It is possible for her to hold her ground, provided she does not rely too much on former reputation and displays activity.

The following are the duties on printing inks:—

1. Black—15 gold lire per quintal (220½ lbs); co-efficient, 0.2.
2. Cinnabar or vermilion—60 gold lire per quintal; co-efficient, 0.2.
3. Others—18 gold lire per quintal; co-efficient, 0.2.

Italy's imports of printing inks in 1920 and the first half of 1921 respectively were: From France, 1,194 quintals and 284 quintals; from Germany, 506 and 244; from England, 677 and 69; from United States, 217 and 0; from other countries, 181 and 20; making totals for the two periods of 2,775 quintals and 617 quintals respectively.

Italy's exports of printing inks amounted in 1920 to 323 quintals, and to 100 quintals in the first half of 1921.

NEW YORK'S LABOUR DAILY.—What is the ideal Labour daily? Well, in some respects the *Forward*, of New York, seems to come pretty near to it. The *Vorwärts*, to give it its official title, has in ten years earned £300,000, and has given £70,000 to Labour causes; it pays its reporters 8s. a week above the minimum (£12 odd), and even pays its charwomen £7 a week. Also it could not be bought during the war, which the editor of the *Nation* (N.Y.) regards as a unique distinction. Yet, although its circulation is far ahead of more famous papers, such as the *Tribune*, *Herald*, *Globe* and *Sun*, probably not half of the population of New York has set eyes on a copy. That is because it happens to be printed in Yiddish.—*Daily Herald*.

More About Photo Typesetting.

Mr. John Robertson, Inventor of the Robertson Photo Typesetting Process, Discusses Mr. Gamble's Prophecy and Some Outstanding Points of Interest Regarding the Invention.

Much interest has evidently been aroused in the trade by Mr. William Gamble's prophecy, as published in our last issue, that photo typesetting will in five years' time be commencing the general displacement of the typesetting methods now in vogue. Since going to press last week with our report of Mr. Gamble's lecture and the interesting discussion it evoked, we have found opportunity for a further interview with Mr. Robertson and his co-inventors, and it will aid in clearing up some doubts and misapprehensions if we report upon some of the points discussed.

The Stationers' Hall Meeting.

We found the inventors keenly interested in the articles published in last Thursday's *British and Colonial Printer and Stationer*. Mr. Robertson remarked that naturally there would be divergence of opinion as to the accuracy of some of Mr. Gamble's deductions, but it might be said without fear of contradiction that Mr. Gamble held a position and a past record that entitled his opinions to be received with the very highest respect. Mr. Robertson added that if his own opinion differed from Mr. Gamble's he would enter into controversy only after making very certain of his position and then with some diffidence. Fortunately, however, he had the happiness of finding himself in general agreement with Mr. Gamble's expressed views. It was gratifying to learn that not only had Mr. Gamble spoken very favourably of photo typesetting, but that in the course of the discussion the Robertson method had received flattering references from two or three speakers. Possibly, however, some incorrect ideas were entertained about the process, and some further information would be desirable.

Origin of the Invention.

Referring to his well-known printing activities at St. Anne's, and the circumstances in which the new photo typesetting invention took its rise, Mr. Robertson remarked that he, together with his co-inventors had been for some years engaged in improving litho offset printing, and their efforts had had very favourable and most encouraging results. At an early stage, however, they realised that the process they were working upon was incomplete without a photographic composing machine.

The interest aroused by the production of the *Blackpool Times* by offset is well known throughout the trade. At present the text of that journal is set in linotype slugs before the photographic negative can be obtained for making the zinc plate for printing by offset litho. It soon became evident, however, that an immense advance would be made if it were

possible to do away with the necessity for the casting process, and find a means of composing directly upon a photographic negative. After due thought the inventors decided to take as the model what they regard as the most successful composing machine extant, i.e., the linotype, so they based the mechanical movements required on that most ingenious mechanism.

The Machine Described.

Broadly, very broadly speaking, said Mr. Robertson, the Robertson photographic composing machine consists of a linotype in which the metal pot and its attendant units are replaced by a camera; and the matrices, instead of having the usual casting indentations, bear in the same position a sharply defined character suitable for photographic reproduction.

The first Robertson machine, we learnt, will not embody the use of transparent "matrices" (the name is incorrect but convenient), but opaque, solid metal matrices, the reproduction being obtained by reflection. In general shape the matrices are similar to those of the linotype machine, but are appreciably larger and carry a relatively large character, viz., 24 point. The camera is immediately adjustable for magnification or reduction through a wide range, thus making the machine suitable for display work as well as ordinary setting. Sixteen different sizes of type are provided for, ranging from 6 to 48-point in several different faces.

The Justification Problem.

It is about a quarter of a century since attempts began to be made to introduce photo typesetting. Of the many difficulties with which inventors have been faced the greatest has been the problem of justifying the line. We therefore made a point of seeking from the inventors something a little more definite as to the way they are tackling their justification problem.

We were told at once that the photographic "stretching" of a short line or "squeezing" of a long one was not relied upon as the principal method. Justification of the line is obtained by means of wedge spaces as in the linotype, but they provide—as an adjunct and because it is easy to do so—a photographic justification which comes into operation only when the operator sends away a "long" line; i.e., a line having, say, two or three characters above the normal. Thus the operator is frequently able to complete a word that would otherwise require to be divided. Of course this photographic reduction of a long line to normal, affects the size of all the characters in that line and the extent of this reduction must be only slight,

We were told that tests show that in the case of ordinary reading matter reduction is permissible within a small limit and it is not proposed to use it outside this limit excepting for display work. The photographic enlargement of short lines to wider measure is not contemplated.

Corrections.

When the word "corrections" was mentioned, Mr. Robertson remarked with a smile that he thought he could safely say that in all the discussions he had had in reference to their machine not one solitary individual had yet neglected to inquire: "All very well, but what about corrections?" "Sometimes," said Mr. Robertson, "we explain and sometimes we do not, but we are printers and we do print a newspaper among other things, so it is reasonably safe to assume that we have not neglected to make provision for this unfortunate necessity."

We gather that though corrections could be done by the method indicated by Mr. Gamble—viz., obtaining the negative on a film, which could be cut and joined up again as in cinematographic practice—the inventors are confident that they can greatly improve upon that method. They are looking, we understand, to photographic paper to facilitate the making of corrections.

Distorting of Typefaces?

When told about the photographing of 24-point type originals with an enlargement to 48 point and reduction to 6 point, we naturally raised the objection—so firm an article of faith to the typefounder—that this would result in distortion of the original, or rather that the enlarged or reduced face, just because it was an exact replica of the form of the original and not modified to suit the change of size, would be comparatively unshapely or of faulty design.

By way of reply we were shown actual examples, first of 24-point faces as printed from foundry type, then of photo-litho reproductions of the same in sizes varying from 48-point to 6-point. The results obtained surprised us, the enlarged and reduced type faces being such as could scarcely arouse criticism from any ordinary reader; and that is doubtless of more importance than the possibility of criticism from aesthetes.

Demonstrating the Process.

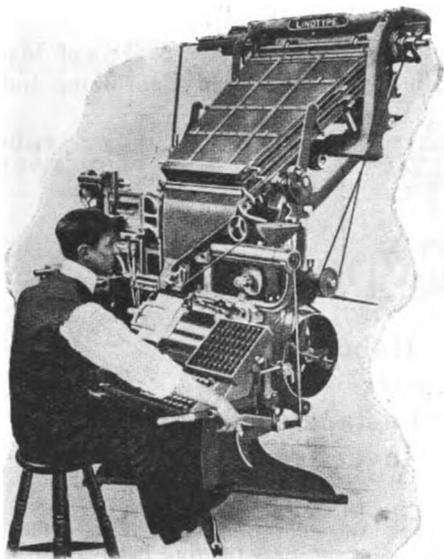

As to the vital question of translating inventive theory into actual demonstration, we learned that the first Robertson photo typesetting machine yet awaits manufacture. The inventors, however, base their confidence upon the assurance that the factors to be embodied in the complete machine have all been separately demonstrated to be practicable,

TRADE **LINOTYPE** MARK

**NO
 MAKE-SHIFTS**

Every part of the Linotype is there because the machine is better for it and every part fits into the big scheme of simple operation.

**NO
 EVASIONS**

THIS illustration shows the operator of a Model 4 Linotype shifting magazines. Note that whilst still at the keyboard he is able to change quickly from one magazine to another. Model 4 Linotype gives the operator no fewer than six different founts of upper and lower case, or alternatively as many as eighteen different founts of display capitals. This equipment can be extended by substituting extra magazines for those on the machine.

Sir, Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

- The Subscription is annual, payable in advance, and may commence at any time.
- All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
- Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
- The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
- In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—

- Ten Status Enquiry Forms and ten Debt Forms free of charge.
- Further Enquiry Forms during currency of Subscription at 2/- each.

The Collection of an "unlimited" number of "Accounts" at the following rates of Commission:—
 Debt
 5% on amounts recovered up to £20
 2 1/2% on amounts over £20 and up to £100
 1% on amounts over £100
 5% on amounts recovered in Ireland, Scotland and the Channel Isles.

- Special terms in respect to Foreign Debt collections and enquiries.
- Representation at Meetings of Creditors free of charge.
- Searches of the Registers (unlimited) free of charge.
- Legal Advice by the Solicitors to the Office upon ordinary business matters free.

(Signed)..... (Address).....

Date.....192..... Business.....

and that the larger part of the mechanism included is similar to that of the linotype, about the practicability of which no doubt can now be raised.

It is interesting to learn that the work of preparing the designs for the first Robertson machine is in the able hands of Mr. Harold Isherwood, O.B.E., M.I.Mech.E., long with Linotype and Machinery Limited.

The inventors state that, by virtue of the elimination of typesetting, their machine will have 30 per cent. fewer working parts than the linotype.

Mr. Robertson and his collaborators manifestly entertain no doubt as to their ability to have a complete machine working at an early date, nor do they question its ability to displace the greater part of present-day typesetting. Whereas Mr. Gamble specifies five years as the interval before this displacement definitely sets in, Mr. Robertson's estimate is two years.

The Patent Specification.

The patent specification, with four sheets of drawings, relating to the Robertson photo-composing machine, has just been published, the patentees being Messrs. John Robertson, Thomas William Brown, and Andrew Orrell. The number is 186,255, and copies are obtainable from the Patent Office at 1s. each. Whilst the principle of the invention is covered in the specification, it should be noted that under Mr. Isherwood's hand the designs have been greatly modified. The first machine is to approximate much more closely to the linotype than the specification would suggest.

Of very special interest, of course, is that vital part of a patent specification, the statement of the claims made. The present article may well conclude by citing in full the ten claims in the Robertson complete specification. They are:—

1. The combination of a type-setting machine of the kind in which the characters are capable of being set into a line by means of the usual setting keyboard, and containing selecting and distributing mechanism, but in which the usual type-casting matrices are replaced by character members suitable for photography, together with a photographic attachment including a light source, a lens, and a sensitised member to receive the successive impressions of lines of characters, and combine them into a column.

2. A machine as claimed in Claim 1, provided with a focussing adjustment to vary the size of the images on the sensitised member, so that one set of characters may be reproduced in a variety of sizes between the limits of the machine.

3. A machine as claimed in Claim 1, provided with means whereby the setting of a line of characters of abnormal width automatically adjusts the magnification of the photographic image for the purpose of justification.

4. A machine as claimed in Claim 3 wherein the lens and the sensitised member receive relative lateral motion to centralise the line of images with the column.

5. In a machine as claimed in Claim 4 means for justifying the impression received from a line of characters consisting of a member contacting with the last character member of the line by which the lens and the sensitive member are moved relatively in a longitudinal direction to effect adjustment of the magnification of the image and transversely to centralise the line of images with the column.

6. In a machine as claimed in Claim 5 the means for effecting justification substantially as described.

7. A machine as claimed in Claim 1 in which the character members are delivered in line to a guideway, means to raise the guideway in front of the lens, and means to alter the magnification of the image, and to centralise the image with the column, operated by the width of the line of character members.

8. For use in a machine as claimed in Claim 1, "matrices" having the characters formed in a negative or positive fashion on a translucent or transparent base through which a beam of light may be projected when the exposure is made.

9. "Matrices" for machines as claimed in Claim 1, constructed from two superimposed plates of glass, the character being upon an abutting face, the plates being provided with a metal top cut according to the usual character combination.

10. The machine for setting character members in line and photographing such lines successively to form a column substantially as described and illustrated.

**SOUTH-WEST
London Master Printers' Association**

Visit to Apsley Paper Mills.

A Visitor's Appreciation.

There are good days and bad days—days to be remembered and days to be quickly forgotten—and days which are of no account at all. To us, November 6th, 1922, will always be one of pleasant memories and of business interest that will remain in our minds for many a day to come.

There were a goodly number of us—members of the South-west London Master Printers' Association—whose natural pride compels us to describe ourselves as "Master Printers"—and we foregathered on a typically dull, dreary November day at Euston Station preparatory to a journey to Boxmoor on a special invitation to view Messrs. John Dickinson's Apsley Mills. The journey down passed pleasantly enough—it was good to be out of the raw weather snugly ensconced in a warm railway carriage—and we passed the time discussing our mutual interests, only to arrive at the inevitable conclusion that there is little money to be made in printing and that it is a slow game! However, we all thrive somehow! Eleven-thirty saw us at Boxmoor Station, surrounded by a beautiful countryside which is beyond our poor powers of description, and there we had our first introduction to the kindness and thought of hosts, which proved to be the feature of our visit. Cars conveyed us the mile-and-half's journey through the village to the "front door" of Apsley Mills, where the dreariness of the day was more than made up for by the warmth of our reception.

A Wonderful Organisation.

After the necessary preliminaries of divesting ourselves of overcoats, macs, umbrellas, etc., was over, we found we had but a short half-hour before lunch. Accordingly, we were immediately conducted to view the various processes of board making, and there saw Messrs. Dickinson's famous Ivory boards being pasted up from large reels of paper. The various technicalities were most ably explained by our hosts and in the short time at our disposal not a moment was wasted. Adjourning for lunch we collided—almost literally—with the employees, who, on the sound of the hooter, made their exit in the manner of a never-ending stream, whew! three thousand of them—and the place emptied in less than five minutes. We began thinking very hard of the organisation that maintained such an army of workers, and wondered what we, as "printers and stationers" would feel like if we employed a fifth part of that number. Gradually they left us there alone as they went off their many ways—some on cycles (and incidentally the company houses 700 of these), some on buses, some on foot—but the majority of them, just across the road to the Guild House, their own social club and restaurant, where a good lunch at a reasonable figure awaited them. Before passing to our own lunch we looked in at them in the canteen, where they all sat at large tables very healthily interested in the good fare provided either by the kitchen committee or themselves.

Lunch occupied us for an hour, and—well it was a lunch to which one could not do justice in less time. Various speeches followed—our good friend and president, Mr. Wise, ever to the fore—and then we rose, agog to see more and more of this wonderful "J. D. and Co." organisation.

We now separated in parties of four, with a guide to each—a thoughtful arrangement which ensured to each individual a real opportunity of seeing and understanding all that was shown to him. It would be impossible to describe in detail in the short space at one's disposal all that was seen, so we must outline to the best of our ability the main features.

Many Departments Inspected.

Our first visit was to the bookbinding department, where books of all sorts, shapes, and sizes started as plain paper and finished up as the complete article. Paper of all descriptions, ruling machines of all sizes and design, wire stitching and thread sewing machines, numbering machines, index cutting machines, guillotines—here they all were arranged in perfect order and doing each its separate job steadily and uninterruptedly.

Cases were made by both hand and machine, books were sewn and rounded by both hand and machine—the human element always present in some degree. To us, it was a real education to watch the various processes which we all know so well, in a firm where they think and work in thousands as against our smaller quantities. A too short hour soon flitted by, and with a finishing peep in the wood-working department—filing cabinets, office furniture, etc., etc.—we adjourned for tea. This proved a most refreshing pause in which mentally to digest the information so freely given us, and gave us the opportunity of comparing our impressions. One and all remarked on the entire absence of mere rush and bustle and scramble, and agreed that the departments we had visited so far were a sound proof of what good and efficient organisation can mean. If Henry Ford himself were director, he would do no better!

Our visit, however, was by no means over yet, and, tea finished, we passed on to the envelope departments. Here again it was the same story, up-to-date machinery, expert operatives, steady work, and complete efficiency which clearly demonstrated the secrets of an enormous output to meet present-day competitive prices. Still more machines of all descriptions and sizes, by the hundred—cutting machines, gumming machines, folding machines, complete envelope making machines (in which the complete envelope is made in one operation) die stamping machines, and all the minor parts which go to make the complete whole—met our view.

Passing from the envelopes, we explored the other very necessary departments, the warehouse, despatch rooms, and power house, and again were impressed by the splendid system exhibited in each place.

A 150-Year-Old Veteran.

Our visit was now drawing to a very regretful close, but our hosts would not let us go until we had been introduced to the veteran of the works. He is 150 years old, and, like Charley's Aunt, is still running. He is the original old water-wheel installed for power purposes in the original Apsley Mill by the first John Dickinson 150 years ago, and he steadily refuses to retire or sever his connection with the firm. Even now when the day's main work is done and the electric power house shuts down, if light is wanted for a small job, he gets busy at once and "carries on" as fit as ever. Good old friend!

And now the time comes for us to go. Once again the cars arrive on the scene—there is a final handshake all round, a gift to each of us of a beautifully bound pictorial souvenir of the mills—and we are away on our journey back to the grime and murk of London.

From start to finish it was a "good day"—full of interest and value from all points of view, especially from the serious business side in which we realised that in the present strenuous times each of us has the advantage of this huge organisation (controlled by a capable and enlightened management) at our service for the mutual benefit of both printer and manufacturer. Their motto is "Visit us and we will show you how we can help you!" Our best thanks are due to the management of J. D. and Co. for their courtesy and kindness, and these we give unstintedly; and to our president and secretary for the excellent arrangements made for the visit.

C.R.S.

Ceylon Paper Duties.

The proposed new customs tariff in Ceylon, which is in force as from August 25th, pending the passage of the Bill through the Legislative Council and the granting of the Governor's assent thereto, provides for the following duties:—

Art, works of, including pictures, prints, and picture post cards, 20 per cent. *ad valorem*.

Cards, playing, 20 per cent. *ad valorem*.

Paper, printing, printed forms, accounting paper, and printed labels, and paper for lining tea boxes or packing tea or other Ceylon produce, 2½ per cent. *ad valorem*.

Millboard, strawboard, cardboard, and pasteboard, 2½ per cent. *ad valorem*.

The table of exemptions include: Advertising matter, viz., trade circulars, trade catalogues, show cards, show plates and frames, not including name plates and signboards; books, printed, book covers, and manuscripts; exercise books in paper covers imported for educational purposes; maps and charts; and printed music.

A HARRIS
ENVELOPE AND CARD PRESS
 WOULD
SAVE YOU MANY POUNDS!

The Harris Blanker is a high-speed Rotary Press with a simple and positive suction feeder for printing envelope blanks in the flat after being die-cut and before being folded. It will handle the complete range of standard envelope blanks; has an automatic suction feeder, packer delivery, and attains a speed of 12,000 per hour.

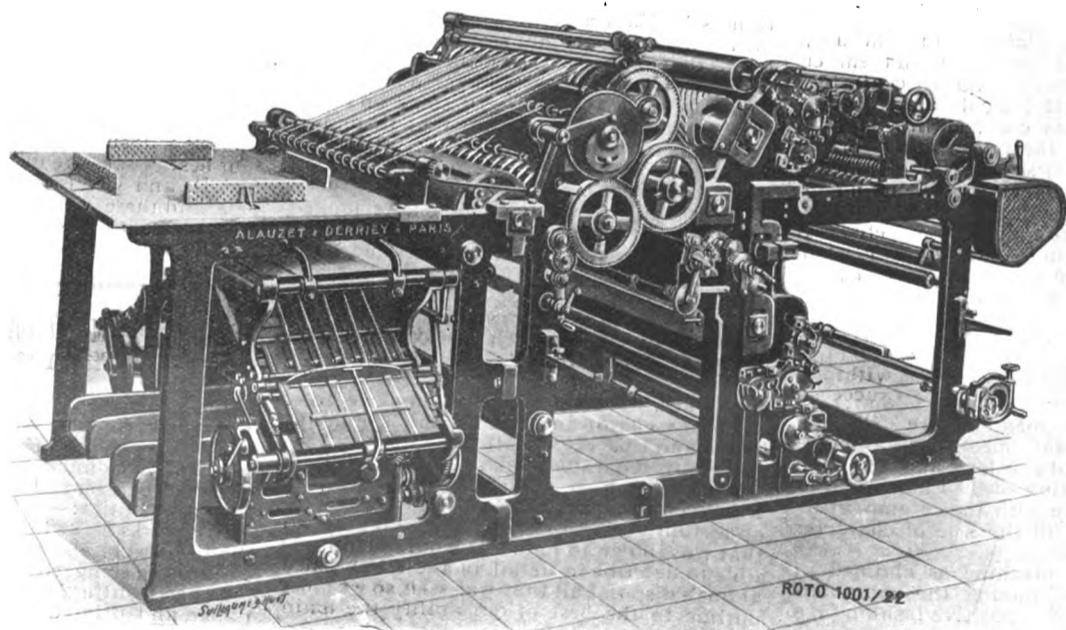

Call and see it at the Showrooms of
 The Lanston Monotype Corporation, Ltd.
PRINTERS' MACHINERY DEPARTMENT,

ALAUZET & DERRIEY, Réunis.

Materiel d'Imprimerie & Machines Outils (S.A.)

Main Office - - - 81, Av. Philippe Auguste, PARIS.

WRITE TO-DAY FOR FULL INFORMATION ABOUT OUR PERFECT ALL-SIZE ROTARY PRESS.

ALL-SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

Printers' Managers and Overseers ASSOCIATION.

Officers Nominated, and a Lecture.

Two important items on the agenda drew an excellent attendance of members to the November meeting of the Printers' Managers and Overseers (Parent) Association on Tuesday last week. The first was the nomination of candidates for the post of council members and officers of the Association for the ensuing year. The second was a lecture by an old friend of the Association, Mr. Frank Colebrook, F.A.I., who spoke on "Fact and Fancy in Printing Valuation." Mr. S. M. Bateman was in the chair.

The meeting opened with a touch of sadness, the chairman announcing with regret that one of the Association's oldest and most respected members, Mr. Robinson Innes, had passed away since the October meeting. Mr. Bateman went on to say that Mr. Innes, known to all of them as "Bob," was one of the best and most kind-hearted of men. He was "one of Nature's gentlemen." He then read a letter communicating the sad news. Mr. Innes, it appears, met with a sudden and fatal accident, by being knocked down by a motor car, sustaining a fractured skull, and dying later at King's College Hospital without regaining consciousness.

Three Additions to the Association.

Again there were names of candidates for membership to be voted upon, and the following three new members were added to the Association by unanimous vote:—J. H. Gask (Fleetway Press, Ltd., 3-9, Dane-street, Holborn, W.C.1; rotary overseer); W. J. Haycock (Messrs. Haycock, Cadle and Graham, Ltd., 106-140, Neate-street, Camberwell, S.E.5; general manager); G. J. Little (Messrs. Haycock, Cadle and Graham, Ltd., 106-140, Neate-street, Camberwell, S.E.5; assistant general manager). Mr. Gask and Mr. Little, who were present, were personally welcomed by the president.

Officers and Council Nominated.

The next business was the nomination of members to serve as officers on the council. The Association's satisfaction with its existing set of officers was manifested by the re-nomination of every one of them, many appreciative remarks being made regarding their services during the past year. The nominations stand, therefore, as follows:—President, Mr. S. M. Bateman; vice-president, Mr. R. H. Berry; trustees, Mr. J. C. Pugh and Mr. G. Phillips; treasurer, Mr. C. Durston; general secretary, Mr. E. W. Whittle; financial secretary, Mr. W. H. Gill; technical secretary, Mr. H. Blackwell.

For eight vacancies on the council no fewer than 17 nominations were made, the following names being put forward: Messrs. J. Acton, C. Northam, L. C. Mennell, G. E. Parker, E. Hutchins, F. J. Field, R. Simpson, C. W. Brown, T. B. Lapworth, T. Heptonstall, E. G. Bausor, A. H. Wilson, E. H. Campling, A. S. Thatcher, S. J. Holt, G. H. I. Freeman and G. Waller.

Mr. Colebrook's Lecture.

The business part of the agenda having been completed, Mr. Colebrook was called upon to deliver his lecture, a summary of which is unavoidably held over to next week's issue. Though Mr. Colebrook apologised for having been unable to give the time he would have wished to the preparation of his address—he had been in five towns within the previous ten days—he nevertheless succeeded well in holding the attention of his audience, the chairman remarking at the close that members had found the lecture extremely interesting, and that Mr. Colebrook had once more proved himself a capital speaker, for every one in the room had been able to hear the whole of what had been said.

The meeting was then thrown open for questions and discussion.

Photo Typesetting.

Mr. V. Pitman paid a warm personal tribute to the kindness done him by Mr. Colebrook in time of business trouble and the help, very profitable to Mr. Vincent's employers, Mr. Colebrook rendered as valuer when there was difficulty over a particular and costly machine. He mentioned a few of the many points upon which he would like to have asked questions. He referred to Mr. Gamble's recent prophecy that photo typesetting would in five year's time be beginning to displace

present methods, and went on to indicate the revolutionary possibilities of the photo typesetting process. "It is coming, gentlemen," he said, "it is not a vision. You cannot stop progress." He suggested that the Association might spend an evening in discussing the implications of the change in values and in other regards which photo typesetting might inaugurate.

Mr. Whittle made some humorous comments upon valuer's work, and went on to refer to the prophecy of the early displacement of present-day printing methods by photo typesetting, when he jocularly suggested that printers' managers would soon find themselves managers of picture palaces. (Laughter.) He intimated that his post bag showed that members of the Association were keenly interested in the subject of photo typesetting.

Mr. J. Acton asked whether, in the event of his being fortunate enough to purchase for £1,000 a plant worth £10,000, he would be entitled to enter the £9,000 on his income tax form for the year, and whether it would be rated accordingly.

Mr. Colebrook Replies.

Mr. Colebrook, replying to Mr. Acton, said that in such a case the income tax people would say that they were not concerned with the exact amount that would have to be paid to replace such plant to-morrow. On the one hand, they would not claim that the purchaser was now richer by £9,000 and ought therefore to pay 5s. in the pound on it, and they would also say that the printer in such a case must not ask for depreciation allowances on that £9,000. That was their traditional attitude. But they were somewhat inconsistent and illogical in the pursuit of equity, for they now tended to meet the printer part of the way in such a case. The British Constitution, said Mr. Colebrook, though not set down in writing, and not very definite nor logical, was a thing which worked. Commonsense came into play. So in regard to the income tax. Apparently more allowances are at times made in practice than the strict letter of the office usage would seem to promise.

Referring to the subject of photo typesetting, Mr. Colebrook said this was not the first time the early decease of letterpress printing had been announced, but he deprecated undue apprehension in the matter especially as regarded jobbing work. Justification would be one of the crucial problems that the inventor of photo typesetting would have to solve.

A vote of thanks, moved by Mr. R. H. Berry and seconded by Mr. S. A. Dawson, was very cordially adopted, and with this the meeting came to an end.

Printers and the Election.

Success of Federation's Campaign.

The printing trade was evidently very widely roused to action by the vigorous campaign which, as reported last week, the Federation of Master Printers has been conducting through its numerous local associations. The attention of Parliamentary candidates throughout the country was called to the examples of State trading given in the recent report of the Auditor-General, and particularly to the loss at the Harrow Printing Works of £32,000 in nine and a-half months, whilst their views have also been questioned in regard to the postal rates and the Merchandise Marks Act.

We understand that the replies received by master printers' representatives everywhere indicated that the majority of Unionist and Liberal candidates unhesitatingly expressed their opinion against State trading and in favour of discontinuance of the experiment at Harrow. Opinions regarding the need for further reduction of postal rates were equally emphatic, though some of the candidates made the reservation that the postal services must not be subsidised. Printers, of course, contend that no subsidy will be necessary, but that an increase of revenue would undoubtedly follow a further reduction. On the question of the Merchandise Marks Act opinions were somewhat divided, many candidates being entirely in favour of the suggestion that the country of origin should appear on all printed matter, whilst others thought that it would be sufficient to state "Printed abroad."

Trade Notes.

HERTFORDSHIRE master printers are to meet at dinner at the Holborn Restaurant on Wednesday next, the 22nd inst., when a number of distinguished guests are expected to be present.

W. & N.W. COSTING MEETING.—The meeting to open the master printers' costing campaign in West and North-West London, previously arranged for Tuesday, November 14th, has, in consequence of the General Election, been postponed to Monday next, November 20th, at 7 p.m. It will be held at the Westbourne Park Institute, Porchester-road, W., opposite Royal Oak Station, and be open to all master printers on presentation of their business card. Mr. W. Howard Hazell and Mr. J. D. Wise will be the speakers.

FALSE IMPRINT.—Odhams Press, Ltd., state that it has been brought to their notice that a manifesto appealing to Germans and Austrians who have votes in this country to support Labour candidates bears a false imprint of their name. They will be glad of any assistance in tracing the actual printers. This is the manifesto, responsibility for which has already been disclaimed by the Labour party.

THE second lecture of the series arranged by the Society of Bookmen at Stationers' Hall was given on Tuesday the 7th inst., when Mr. Chas. T. Jacobi (formerly of the Chiswick Press) gave an address on "Modern Printing and Book Production." Mr. R. A. Austen-Leigh presided, and there was a good attendance.

ASSOCIATED NEWSPAPERS BONUS.—The directors of the Associated Newspapers, Ltd., have resolved to capitalise £250,000 of undivided profits, and to issue to the deferred shareholders 250,000 £1 deferred shares as a bonus in the proportion of one new share for every three shares held. The allotment letters were to be issued on November 15th.

PRINTING BETTING COUPONS.—Fined £10 at Leyland on Monday for printing ready money football betting coupons, Edward Mould, printer, gave notice of appeal. The prosecution alleged that a man charged with street betting was found in possession of coupons bearing the name "Mould, Printer, Leyland." At the bottom of the coupon was printed in very small type the words "credit only." Defendant pleaded that the coupons were for credit, and not ready-money transactions.

THE death has occurred, at the age of 73, of Mr. Alfred Edward Thomas Watson, editor of the *Badminton Magazine*. His long journalistic career associated him prominently with *The Times*, the *Illustrated Sporting and Dramatic News*, and the *Saturday Review*.

SEIZING the opportunity of the large crowds gathered in Fleet street to witness the Lord Mayor's Show, a man began shouting "£20 bank-notes" for sale at 3d. each. Before making off, at the approach of the police, he did a brisk trade in these notes, said to be similar to the genuine article.

London Costing Campaign.

Inauguration in the South-West District.

A meeting of the South-West London Master Printers' Association at Westminster Central Hall on the 7th inst., witnessed the inauguration of the new costing campaign which is being conducted throughout the Metropolis by the London Master Printers' Association. Mr. Howard Hazell had been announced, together with Mr. A. Williamson, to address the meeting, but illness prevented his attendance. The chairman (Mr. J. D. Wise) and Mr. Williamson, combined with an interesting and helpful discussion, gave an excellent start to the campaign.

Before the subject was reached, the chairman read the correspondence which had taken place between the secretary (Mr. Cole) and the Church Travellers' Club over an order for printing which that organisation had placed in Austria. The secretary of the Travellers' Club pointed out that the chief economy was in the postage, the cost of printing being a mere trifle. In his letter to the Club, Mr. Cole had emphasised the effect upon unemployment which the placing of printing orders abroad had, adding that unemployment meant high costs and high income-tax, and these would remain unless the Church was prepared to help to alleviate the present uneconomical situation.

Mr. W. Whyte, secretary of the L.M.P.A., mentioned that this matter had been taken up by the Federation and suggested that the proper course was to approach the unions, who had more influence on the Government than had the employers.

The chairman thanked Mr. Cole on behalf of the members for the action he had taken.

Initiating the Costing Campaign.

The chairman said that meeting represented the opening of a great costing campaign which was to take place in London; and he went on to show that printing had developed from a craft into a great industry, where instead of one man doing the whole job they had specialists in every department. Every one of those varying operations had to be paid for, and the Costing System showed how the cost could be recovered. Master printers had got to reduce their costs, and the Federation system would help them; and when they had cut their costs, then they could reduce their prices. Means must also be devised for increasing their production, for already their customers were beating them at their own game. In this connection Mr. Wise mentioned a machine which would turn out 3,000 an hour with the attention of a girl, whereas in their own case they could get no more than 1,000 an hour.

Using the System.

Mr. Williamson was anxious to know whether those who had installed the costing system were using it to the best advantage, whether they were interested in the statistics which it furnished, and were finding out how the cost of the product could be reduced. If they were not doing these things, then their work was unsatisfactory. As he had stated many times, the object of the Costing System was not so much to indicate how much they could put on the invoice, but to find out what their costs were with a view to reducing them. Mr. Williamson mentioned the enthusiasm with which Glasgow master printers had taken up the subject of costing and their special efforts to induce all their members to instal the system. Referring to the Bulletin of the United Typothetæ of America, the speaker mentioned the system of getting estimates from one printer after another in the hope of reducing the price to a minimum. Statistics showed, however, that 90 per cent. of the work thus obtained was done in one office and not upon competitive lines. He calculated that at least 75 per cent. of the work done by the master printers attending that meeting had been performed for regular customers. If these figures of 90 per cent. and 75 per cent. were correct, why was it that they had allegations of price cutting? These facts were a justification for the introduction of the Costing System.

Chargeable Hours.

Mr. Williamson went on to detail the costs in the composing-room. He asked how many of them had looked into their statements and inquired how it was they only got 32 chargeable hours. Some firms had gone into the question and secured more than that. Some were returning more than 32, and if they divided their costs by a larger number of

chargeable hours they got a lower rate. They needed to look into the time that was taken on the various operations. Systematic distribution was one method by which they could increase chargeable hours—not a misleading increase, but a satisfactory and reasonable one, and there would be more time available for other jobs. He wanted it to be made easier for a man to produce a full hour's work in an hour's time.

Coming to the hourly rates, Mr. Williamson mentioned that an impression existed with many master printers that these rates would not have been introduced if they had been unsatisfactory. But whereas the official London rate was 5s. 5d., in a particular office an average for four weeks in the month of September had worked out at 6s. an hour. If, in such a case, the firm was using 5s. 5d. an hour, the difference between that and what it was actually costing them was a dead loss. Some firms were using 5s. 5d. an hour, and yet they did not know whether the work was costing them 5s. 5d. or 6s. or even 4s. 6d.

Equitable Costs.

The next thing the master printer had to inquire into was whether his costs were equitable. It might cost, say, another £100 to furnish their composing department properly; but if by that expenditure they were facilitating the passage of a job, it reflected itself immediately on the class of work they were producing and on the cost of each individual order. It might mean an increase in the hourly rates; but if they increased the hourly rate by 1d., and on the other hand were able to facilitate the passage of a job by five minutes in every hour, they were reducing the costs very considerably, particularly when they recollected that five minutes in every hour was costing them 5d. on to each job.

In connection with the monotype and the linotype, Mr. Williamson emphasised the importance of the quality of metal that was used. For instance, with a secondary sort of metal they might be producing 5,000 to 6,000 an hour, but by an expenditure of another £10, they might be able to increase their output by 1,000. At 2s. 9d. per 1,000 ens an expenditure of £10, with the addition of another 1,000 per hour, would be a paying proposition.

Another method for speeding up would be in providing copy which was properly punctuated and easily read. Mr. Williamson mentioned a linotype operator who was regularly turning out 10,000 an hour. That was in a newspaper office; but if it was possible there he thought it was possible to obtain between 5,000 and 10,000 in a jobbing office with the provision of facilities. The costing secretary went on to urge the regulation of jobs on the printing machine according to their size, such as putting the largest job on first, and scaling down systematically.

What he was trying to show was that when they found out what the cost of the operation was they had next to find out whether the time spent in the hour was producing a full hour's work, and if not, why. He mentioned the case of a firm which had taken the whole times for a year, calculating their making-ready time and their running time, and they were astonished to find that 50 per cent. of the time charged out to jobs in the machine-room was making-ready time. With these facts before them it was possible to take steps to reduce operations to a minimum. He (Mr. Williamson) had a feeling that the printer thought first and foremost of the job he was going to produce, while the means of producing it were not sufficiently considered. The speaker went on to enlarge upon the standardisation of methods. If people in the printing industry used the system more widely they would be able, by the statistics, to suggest ways and means of reducing the cost of an article to the public and so increase the demand for it.

There were two influences at work to-day which were impeding the demand for the printers' product. One was the state of trade, and the other was the cost of the product. The adoption of the costing system would help them to cope with the situation. He mentioned that the increasing use of the Federation Costing System was gradually making it more difficult for the firms who have not yet adopted it, because the firms which were using the system would secure the profitable work and the unprofitable orders would go to the other concerns. In conclusion, Mr. Williamson suggested that the hourly rates had served their time, and if he had his way they would now disappear.

DISCUSSION.

Mr. W. G. Mead, who declared that the linotype operator in a newspaper office was a

mere key-puncher, thought that if they were getting 6,000 all the week through in a jobbing office they were doing very well, because in a jobbing office the operator had also to attend to the machine. He agreed with Mr. Williamson with regard to the quality of metal and related his own sad experience with a sample hundredweight which he had tried.

Mr. Williamson said both these questions came into the matter of cost. If they increased the cost on a machine and they reduced their output, then their cost per unit on a job was more. His point was that they required to have a costing system that would act quickly, as the Federation Costing System did, in addition to their practical knowledge of the trade. He wanted these two factors to be brought together.

Mr. Wright mentioned that he had installed the Westminster Costing System in 1911, Mr. Harry Caslon having brought it over from America. He shared with the accountant who introduced the system the profits at the outset, and in the first year they divided £260 between them.

The Chairman thought this was a splendid testimony to the value of costing, and as against the £130 which Mr. Wright had to pay to the accountant he mentioned the guinea per £1,000 turnover which it cost to instal the Federation Costing System.

Mr. W. J. Boyle spoke of the advantages of a D.D. keyboard on the monotype, since it enabled them to keep a stock job on one side, while they proceeded with a pressing order.

The Chairman mentioned that a friend of his congratulated himself upon the fact that the linotype he had installed was never standing still, although he did not know how many ens it was turning out. (Laughter.)

In response to the request of the chairman as to views with regard to productive hours, Mr. Wright said that after 22 years' experience he thought 32 hours was a fair average.

Mr. Spring, who mentioned that the 32 hours referred to a hand-set house, said it was not unusual on a monotype keyboard to get an operator doing 7,000 or 8,000 all the week through, uncorrected. But when they reckoned up their output at the end of the week they found they had not that output. With only a single installation they had to calculate according to what the caster would do. If they got 6,000 an hour from the caster that was the amount they had to charge and get their cost on.

Mr. Williamson thought the best thing to do was to have two rates, one for the keyboard and another for the caster.

Mr. Simnett said he was as keen as anybody on the question of costing and getting down to the bedrock facts. He did not see how it was possible to standardise in the machine-room. The printing trade was unique in being the most uncertain trade that any man could be engaged in. He particularly referred to rush work, and to the necessity of putting in hand at once orders which were urgently required by an important customer.

Mr. Williamson said his idea with regard to standardisation was to apply that to principles, and not to details. He thought these rush jobs had been encouraged by the fact that the printer had allowed the customer to dictate to him.

Mr. Boyle pointed out that London printers lived on rush jobs, owing to the fact that the customer had not the time to wait for the work to be done in the country.

Mr. Whyte pointed out that in other industries customers were expected to take their turn. After paying a tribute to the industry Mr. Williamson exhibited in the costing campaign, Mr. Whyte envisaged the time when the Federation System would be produced in court as a determining factor. The system had been approved by the chartered accountants of the country, besides being specially adapted to printing trade requirements. The speaker also paid a tribute to the very excellent address on costing which Mr. Wise had delivered in Glasgow.

The Chairman, in a further tribute to the costing system, said that since he had adopted that method he had eliminated his unprofitable work, and he had been able to get a better income.

A vote of thanks to Mr. Williamson for his address was cordially adopted on the motion of the chairman, who also thanked the L.M.P.A. secretary for his attendance and assistance. Both officials, he added, were present in their spare time for the benefit of the members, and "overtime" was not provided for in their cases.

Visits of American paper trade travellers to Siam are said to have realised good results

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

Situations Vacant.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ADVERTISER seeks opening with a firm of Paper Merchants; good general knowledge of the trade, also English and Foreign shipping.—Box 14004.

ADVERTISER (disengaged) desires Responsible POSITION with large firm of Printers, Publishers, Wholesale Stationers or Paper Agents; expert knowledge on all matters pertaining to Paper and good, sound knowledge of Print and the various processes employed therein.—Box 14012.

LADY seeks situation; experienced Printing also Advert. Business, knowledge Shorthand, Typing and General Routine.—P., 79, Ballater-road, S.W.2 14014

MINDER (Soc.) seeks situation; Wharfedales and Platens; best Jobbing, etc.; 7 years' experience.—127, Leesland-road, Gosport. 14011

YOUNG MAN seeks situation as ASSISTANT MANAGER; good general knowledge of Letterpress Work, Colour Work and Binding; City and Guilds certificate, also Stationers' Hall Costing and Estimating.—Box 14015.

YOUNG MAN, with fair knowledge Book-keeping and General Office Routine, desires engagement; small salary accepted to commence.—Box 14010.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

CAXTON MACHINERY CO., 74, YORK STREET, GLASGOW; surplus plant; warranted good condition—

Quad Royal, two-colour, Dawson and Sons, WHARFEDALE; flyers and geared inkers.

Double Demy, Payne and Sons, WHARFEDALE; large diameter flyer drum, band brake to cylinder, geared inking, full equipment, £300.

38-in. Self Clamp "FURNIVAL" GUILLOTINE; two new knives, £130.

21½ by 16-in. "VICTORIA" PLATEN; four-inking roller, Model V., complete, perfect order, £200.

Several small Guillotines, Paging, Perforating and Platen Printing Machines, and Second-hand Wire Stitching Machines from 3/16th to 1½-in. 14013

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ¼-in.—Box 13998.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD., 1-3, Baldwin's-place, Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

The London Wages Crisis.

THE wages situation in London has now reached a critical point. Several important societies—including the London Society of Compositors, the Amalgamated Typefounders' Trade Society (whose members are employed in printing offices as monotype caster attendants), the Amalgamated Association of Pressmen and the Platen Printing Machine Minders' Society—have now reached agreement with the London Master Printers' Association that their members shall accept a reduction of 6s. a week. This, of course, is a much smaller reduction than has been accepted by their fellow workers in the provinces and in Scotland. The London situation presents special difficulties. The fact that the great daily newspapers of London employ such a large proportion of the workers in the printing trade and that no reduction at all has taken place in the wages of these employees has a bearing upon the London position. It is evident, however, that the leaders of many of the unions now realise that an adjustment of wages is absolutely essential if the removal of work from London to other centres is to be checked. It is surely not desirable that there should be any serious transfer of labour from London to other centres while the housing difficulties are still acute; moreover the disturbance of the existing plant and machinery of old-established businesses cannot be regarded with equanimity. The employers have decided that it is only reasonable that the members of those unions which have not been prepared to accept a reduction by agreement shall now be subjected to the same reductions as the other workers. The steps that are being taken to secure this end will, we believe, be well supported by the whole trade, and we think that when the public is fully informed as to the actual facts there is no doubt that the pressure of public opinion will prevent any stoppage of work. It is to be hoped also that the leaders of the trade unions will assert their leadership and prevent any disturbance being inflicted upon the printing industry at this important season of the year.

The Advance of Photo Typesetting.

ALTHOUGH in giving prominence to the subject of photo typesetting we have dealt especially with the Robertson project, it should be clearly understood that the future of photo typesetting, and in particular Mr. Gamble's prophecy of the near approach of the decadence of present typesetting methods, are not necessarily dependent upon the Robertson or any other individual process. More than one important attempt is being made in this direction, and we know that Mr. Gamble is not yet relieved of all doubts as to the feasibility of the Robertson machine—the first model of which, it should be noted, is not yet built—his doubts being associated for one thing with the suggestion of photographic enlargement from matrices, enlargement being out of keeping with the process man's idea of precision. We had been under the impression that, under Mr. Robertson's guidance, a working model had already been made. As this is not the case, one cannot have quite such confidence as one might if more practical demonstration were an accomplished fact, though we heartily welcome the very interesting and promising enterprise with which Mr. Robertson's name is connected. Our own attitude is, of course, entirely detached. Whilst we realise that revolutions in printing methods may mean temporary loss and dislocation to individual sections of the industry, we believe that anything that involves increased economy of labour or a gain in efficiency, must be of eventual benefit to the printing trade as a whole. Therefore, as we perform our due function of informing the trade of all the principal developments that appear above the horizon, we do so with the quite impartial aspiration "Let the best method win!"

The Election Campaign.

THE views prevalent in the printing trade upon the important questions of State printing, postal rates, and the Merchandise Marks Act must have been well impressed upon the new House of Commons as a result of the active steps taken in the last few weeks by master printers everywhere on the lead given by the Federation of Master Printers. Questions have been asked from John O'Groat's to Land's End, and the local newspapers throughout the country have inserted paragraphs dealing with these important matters. In the Leeds area particularly the Press has given a good deal of space to these subjects. In some centres it is clear that both employers and employees have taken an active interest in the situation, and have made their influence felt. The way in which the campaign has been carried out affords striking evidence of the efficiency with which the Federation of Master Printers is now able to deal with matters that affect the whole industry.

The Postal Fuddle.

THE British Postal Authorities are getting deeper and deeper into the mire over the sample post. Such strong agitation is growing up that it cannot be long before they must capitulate to common sense. A recent instance of the holding up of a post card is about as absurd an example as could be furnished. It was in itself a sample of blotting, but had it not said so it would doubtless have passed through the post without question. Simply because it announced that it was a particular line of blotting it was held up, in spite of the fact that the senders followed the instructions as to specifying "printed matter." On this question of the sample post Mr. A. W. Foster, the secretary of the Papermakers' Association, with that happy gift he possesses of crystallising an idea, has put the following poser to the authorities: "My council would appreciate a statement of the arguments which convince your department that the printing of the words: 'This is a sample of X. Y. Z. paper' on a sheet of paper renders it

liable to a much higher rate of postage." The effect of the check-action, of course, is to seriously hamper British commerce and industry. As we write, a South African publication comes to hand with a declared sample of paper inserted as a supplement, but the newspaper comes through at the newspaper rate. Had a British firm attempted to send out such an inset the postal authorities would have stopped it or surcharged the letter rate. It is time our Government departments gave British industry and enterprise a chance on at least equal terms with their competitors. The attitude taken up by the Post Office is that the sample post is unremunerative. While this is a questionable statement, their action is almost tantamount to raising revenue, by false pretences, which in the case of a private individual would be regarded as a heinous offence.

Personal.

AMONGST those who attended the Lord Mayor's banquet last Thursday were: Alderman Sir George W. Truscott, Bart., Alderman Sir T. Vansittart and Lady Bowater, Alderman Lord Marshall and the Hon. Gwendoline Marshall, Alderman Sir George and Lady Blades, Alderman Sir William and Lady Waterlow, and Mr. Eric H. S. Truscott.

SIR ROBERT BAIRD, K.B.E., the well-known Belfast printer and newspaper proprietor, has been paying a visit to Washington, and attended a meeting in New Orleans in the interests of the Associated Clubs of the World.

MR. J. C. COPPOCK, senior vice-president of the Federation of Master Printers, is visiting Bristol on Tuesday next, the 21st inst., to attend a meeting organised by Mr. E. W. Allen, chairman of the Bristol Master Printers' Association.

MR. OWEN CONNELLAN, formerly president of the Leeds Typographical Society, and an ex-executive councillor of the Typographical Association, has been elected Deputy Lord Mayor of Leeds for the present municipal year.

MR. C. W. BOWERMAN, as secretary of the Trades Union Congress, presided on Saturday at a conference of trade unionists and others at the Memorial Hall in advocacy of reduction of railway fares.

THE delegates of the Oxford University Press have appointed Mr. Kenneth Sisam, B.Litt., to the post of junior assistant secretary.

MR. CLIFF REES, who has been appointed manager-editor of the *Blackpool Times* and allied papers, has for some time been on the staff of the *Cambria Leader* at Swansea, and was previously engaged in journalistic work at Llanelly.

MR. R. SIZEN, who for nearly four years has been assistant editor of the *Birmingham Sunday Mercury*, has been presented with a gold watch by his colleagues on that paper on leaving to take up a post on the literary staff of the *London Evening News*. Mr. Sizen served with distinction during the war, earning the Military Cross.

MR. R. EGAN, editor of the *Wicklow News Letter* and allied papers, has been the recipient of handsome presents from the staff of the paper on the occasion of his marriage to Miss M. O'Doherty, of Dublin.

MR. T. OWEN JACOBSEN (Jacobsen, Welch and Co.), and Mrs. Jacobsen were involved in a serious taxicab smash in Blackfriars-road recently. Mr. Jacobsen was badly cut about the face and was taken unconscious to Guy's Hospital, but was able to be removed to his home at Herne Hill after treatment. Mrs. Jacobsen escaped with a severe bruising.

MR. FELIX J. THOMAS has joined Messrs. Edwin Thomas and Co., Ltd., of 34, Upper Thames-street, London, E.C.4, as managing director.

London Printers' Wages.

Strong Resolution by the Plaster Printers.

At a special general meeting of the London Master Printers' Association, held on Tuesday at Stationers' Hall, Lieut.-Colonel Truscott presiding, the following resolution was carried *nem con.*:-

"That this meeting of members of the London Master Printers' Association endorses the agreements between the L.M.P.A. Council and the L.S.C. and other accepting unions for a wage reduction of 6s. per week in two instalments, namely 4s. on the pay-day in the week ending December 9th and 2s. on the pay-day in the week ending January 6th, 1923, with stabilisation until the end of December, 1923; and authorises the Council to arrange for the posting of notices by members of the L.M.P.A. to enforce these terms upon the members of those unions which have not yet accepted them.

"The Council are requested to make it clear in these notices that workers who are not willing to accept these reductions but prefer to leave work rather than accept them will not be at liberty to return to their present employment until they are prepared to accept a reduction of 12s. 6d. per week."

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

There was the customary large attendance of members at the monthly meeting of the Association, held on Tuesday of last week at the St. Bride Institute, Bride-lane, E.C.4. Before the president (Mr. A. W. Hunt) took the chair, opportunity was granted to the members of engaging in social intercourse, the bulk of the conversation chiefly centering round not the General Election but the great success that had attended the October members' smoker. At the conclusion of the business part of the agenda a most illuminating address was given by Mr. R. H. Roberts, Responsible Master of the Dalston Literary Institute, entitled "Education and Citizenship." As a tribute to Mr. Roberts it was subsequently stated by several of the oldest members of the Association that this address, from the point of view of eloquence and also for its literary merit, was one of the finest that had ever been delivered since the Association's inception.

The secretary (Mr. A. Cox) read the minutes of the September meeting, which were confirmed, and then presented several items of correspondence.

Among these was a letter from Mr. B. J. Sansom informing the secretary of his appointment as a day-time instructor in bookbinding at the School of Printing; Mr. J. R. Riddell, principal of the School, sent reminding the Association that its annual contribution towards the upkeep of the School was due, and he also mentioned that he was hoping later on that their members would pay the School on official visit; a letter was also read from the secretary and chairman of the Lloyd Memorial Home appealing for assistance on behalf of Miss Grey, the popular matron of the Home, who had been compelled through illness to retire from her duties for at least two years.

In regard to the first letter it was proposed by Mr. W. Venum, seconded by Mr. G. W. Sutliff and heartily agreed to that the secretary should send to Mr. Sansom congratulations from the Association on his appointment as bookbinding instructor at the New Printing School.

The question of the grant to the Printers' Pension Corporation was next considered, and it was resolved, on the proposition of Mr. G. J. Hellery, that the same amount as last year—ten guineas—be granted to that fund, and that Mr. J. E. Dixon, in conjunction with the secretary, be asked to dispose of the sum to the best possible advantage to the Association.

Mr. J. Lee proposed and Mr. F. E. T. Fox seconded, that a vote of thanks be passed to Mr. J. J. Jones and Mr. A. C. Ware, the stewards for the members' smoker, for the excellent way they had carried out their duties.

The proposition was heartily supported, Mr. Jones briefly returning thanks.

The Bohemian Concert.

It was unanimously agreed, on the proposition of Mr. Lee seconded by Mr. G. Eden,

that this event, one of the most popular features of the Association's year in pre-war days, should be held again this season, and that a date, preferably in January, be chosen. For this event Messrs. Jones and Ware were elected as stewards.

"Education and Citizenship."

Mr. Roberts was then called upon for his address on the subject stated above. He first of all wished to congratulate the association upon the typically British and business-like way in which it had conducted its proceedings. Mr. Roberts then spoke of the future welfare and existence of their country, which, he maintained, depended upon possessing an educated citizenship. During the war they heard a good deal about the high level of efficiency to which Germany had raised herself, and notwithstanding all the troubles that country was going through at the present time, they must not lose sight of the fact that Germany was not neglecting her schools. Referring to the day continuation schools, Mr. Roberts thought it was a wrong policy to have closed them down. If there was anything bad in the system, a far better policy would have been to improve it, and not to destroy it altogether. Knowledge was absolutely necessary in order to bring a right judgment on the solution of the great problems of the day, and education, moreover, led to toleration. The lecturer's chief point was the necessity for the cultivation of a greater love for art, literature and music, for he thought that if cultural pursuits of that kind were more fully developed the sensational forms of amusement that were seen at every street corner to-day would soon disappear. As overseers and men in responsible positions, he appealed to his hearers to do all they could in the direction he had indicated.

An interesting discussion followed the lecture, in which the president, Messrs. G. A. Rutherford, A. J. Daines, F. J. Ibbott and others contributed.

A very hearty vote of thanks was offered by the chairman to Mr. Roberts, who, in a brief reply, said he had enjoyed his visit immensely.

The meeting then terminated with a vote of thanks to the chairman.

The Life of a Pen.

SIR,—The proposal to bring together a collection of the pens of famous people is most excellent.

Recently I spent a day in searching the London museums for notable relics of the writer's craft, but succeeded in discovering only one pen—the goose quill which George III. flung down when blindness seized him, and which is now in the Stafford House Museum.

The collection should include a feature illustrating the evolution of the pen, from the rudely shaped reed of the writer in the dawn of history, to that wonderful example of human ingenuity, the fountain pen.

My own continuous use of a fountain pen for 27 years is of personal interest only, but your readers will learn with livelier feelings that all Mr. H. G. Wells's books since 1902 have been written with a fountain pen; all Mr. Stephen McKenna's books, all Mr. J. D. Beresford's, and all Mr. Arnold Bennett's since and including "The Old Wives' Tale."

Pens like these, it is to be hoped, will be given or bequeathed to the proposed collection.

Yours, etc.,
DENIS CRANE.

9, John-street,
Adelphi, London, W.C.2.
November 13th, 1922.

A Word of Thanks.

SIR,—My "Diamond Jubilee" has come and gone. The reference made to it by the *British and Colonial Printer and Stationer* brought me an avalanche of good wishes from my brother master printers in all parts of the Kingdom, thus indicating the wide-spread circulation of the "B. and C."

Will you kindly allow me, through the courtesy of your columns, to heartily thank my correspondents, who hail from Land's End to John O'Groats, for their good wishes?

Yours, etc.,
W. H. BURCHELL.

The Bookbinder.

The Binder's Docket at Last!

And a Few Reflections on Costing and the Worker.

By HARRY A. MADDOX.

After months, in fact, years, of quiet but persistent plodding, Manchester has got the Binders' Union to agree to the time docket. Some share in the achievement can legitimately be claimed by this journal, which has been steady in its aim toward costing progress in the bindery. No opportunity has been lost to drive home by argument, demonstration and data the absolute necessity for a better costing organisation in the bookbinding industry. It will be recalled that within recent months Mr. Harraway, the president of the Binders' Union, sympathetically joined in the docket controversy in these pages, and revealed clearly an appreciation of the need for time records. Manchester was the last stronghold of docket resistance, and an earlier meeting of men and master binders will long remain memorable to those who took part in it, if only for the antagonistic spirit which pervaded the hall. We have travelled a long way since those uncompromising days. Despite the troublous nature of the times, and the inevitable occasions for anxiety, it can be said with truth that the relations between the Federation of Master Printers and the Binders' Union are to-day more cordial than at any previous time. The acceptance of the docket in Manchester was made possible only by reason of this good feeling. Opposition to the docket has always been based on suspicion and ignorance of costing methods, the latter a failing of the majority on both sides. The fear on the men's part has been that timing would lead to task work and victimisation, a feeling intensified by the sight of clock dockets with quarter-hour markings down the side. In practice that docket is no more fearful than any other, and not so good as a simpler form. No sane house wants to use time dockets for any other purpose than registering time, and in practice the name of the individual worker gets no further than the docket. To the principal or manager, the thing that matters, and the only thing he is concerned with, is the job cost sheet, and this carries no tales. No purpose is served by considering this matter further in

the light of costing experience extending over ten years in other departments. If there had been task work and victimisation behind the docket there would to-day be no filling in of dockets by T.A. members.

Costing Education Facilities.

On the subject of Cost System ignorance, using the term inoffensively, of course, it is frequently stated by officials and employees that they get no chance to understand the principles of the Federation Costing System. Considering the classes held up and down the country, the special costing campaigns in every large town, the profusion of costing literature, and the existence of standard official hand books, we can hardly agree with the claim. If there is the will to learn, there is ample opportunity for acquiring knowledge. Without a doubt every employer and every worker should know the fundamentals of the Federation Cost Finding System. Foremen and overseers frequently resent a change-over from haphazard guessing to systematic recording, and their resentment is grounded on a false belief that they are thereby robbed of authority. They misunderstand the aim of the docket, and, often enough quite innocently, divert it from its purpose in a wrong endeavour to protect the firm's interests. They doubt the efficacy of cost finding because they do not know it works right through.

Results of Ignorance.

In Manchester the men frankly disbelieved, and perhaps do so still, that bookbinding costs could be ascertained through any docket. They knew nothing of cost and value of production sheets, the progressive accumulation of data which makes possible a weekly financial statement. To them the only thing that could be of any account at all was the finished job. Practical difficulties which are of small moment to those who thoroughly understand cost finding appeared insurmountable to the bookbinder, for the same reason that the lacing of a full-bound

russia and calf ledger would present an insuperable difficulty to the cost-clerk. In the history of bookbinding secret recipes, formulæ and craft-skill have played a prominent part. Some of the art of marbling has died with its originators. There is still a jealous safeguarding of specialised knowledge. It can at least be said of cost-finding that there are no secrets, and there is nothing to hide in the Federation Costing System. When every master printer and binder knows and applies the system price-cutting will be minimised and profitable prices will enable the workers to enjoy better conditions. When every worker understands the rudiments of the system he will frankly co-operate to an end which will bring back benefit from several points of view. When the layman and the consumer appreciate the factors underlying systematised recording of cost as it applies to the production of print and books they will realise that there is greater intellect and higher status behind the industry than they had hitherto conceded.

A Timely Suggestion.

It has already been stated that the information is available to all, but we reserve the right to criticise some of the teaching served out in our technical classes. Fledglings should not hazard to instruct in flight. On this score we opine that a Federation certificate alone should be accepted as qualification of the right to teach costing. It has also been amply demonstrated that there is an unsatisfied demand for elementary insight into the ramifications of cost-finding. It is opportune, therefore, to suggest (and a watchful Federation eye will note the suggestion) that a workers' handbook or pamphlet be prepared for gratis distribution on request. In this work we are gladly willing to co-operate if needs be, but if such a publication came from the lucid pen of one who has already laid the foundation of a library of printing service so much the better—it would make a fitting memento of the final co-operation of the Manchester binders.

Bookbinding Notes and News.

Manchester's Opportunity.

Manchester binders have agreed to the use of the time docket without conditions except as to the form of the docket to be installed. It is to be hoped that the firms in that city will take this opportunity of doing away with guesswork once and for all. The docket is of course useful without the Costing System, but its actual value is then in the ratio of 10 to 100 per cent.

Overcoming the Difficulties.

The practical difficulties in the way of time-recording are the machine operations, miscellaneous batchwork and special jobs which intrude on the day's programme. Large single orders present no difficulty, for timing is straightforward and continuous for the individual order, no matter whether one man or ten men are engaged on it. Every man books his own time and the cost clerk does the rest. Miscellaneous batches will be treated as such, and it is advisable to bracket the

jobs constituting the batch and give them a batch number. The value of this method will be seen in practice when short help is accorded by another employee to hasten the finish of the day's operations. The helper will merely record on his own docket the serial number, and thus save clerical work. The analysis of the batch time to the individual jobs can be made by the binder, the overseer or the cost clerk, according to circumstances and conditions in the shop. Minor difficulties are bound to arise from time to time in regard to timing certain operations. If readers will forward their problems, we will undertake to solve them where we can, and publish replies weekly in this journal without waiting for bookbinding issues. Inquiries should be addressed to "Costing Office," *British and Colonial Printer and Stationer.*

Improved State of Trade.

Trade is vastly improved in the binding industry, especially on the commercial side. Banks, public companies and corporations

are livening up, and some good inquiries are afloat. Many large contracts have been placed up and down the country since our last notes appeared. The publishing side of the industry is quiet, and many machines are still idle. A general improvement in employment and a more lucrative return on enterprise is essential to the full recovery of our book trade.

The Materials' Market.

The market for materials keeps steady, and there is no marked change to record. Leathers are firm, and will continue so. There is no reduction in fabrics, glue or paste. Gold leaf is plentiful and prices tend to advance, but agents are offering their stocks at the earlier figures. Imitation gold leaf is finding wider application among those who introduced it when gold leaf was a scarce commodity. It must be observed, however, that foreign gold leaf is one of the few items in the category of bookbinding materials which ranks lower than 50 per cent. on pre-war price.

Scotland and Bookbinding Prices.

Contracts Go to English Binders.

Some mystification appears to prevail in certain Scottish cities on the subject of bookbinders' prices and the reason why English bookbinders—even London firms—are able to compete successfully with houses on the spot.

The latest example is Aberdeen, a town whose printing and bookbinding industries were at one time able to employ more hands than the needs of the city itself demanded and could even attract orders from England. To-day, however, things are different, and the problem has been brought to a head by a municipal bookbinding contract going to Huddersfield.

Aberdeen's Lost Contract.

At a meeting last month of the Aberdeen Public Library Committee, says the *Aberdeen Journal*, a report was submitted by the Book Sub-Committee dealing with the question of the outside bookbinding work for the ensuing six months. From the report it appears that in the month of July last correspondence took place between the committee, two local firms of bookbinders and bookbinding firms in London, Huddersfield and Bath.

The sub-committee resolved to place the contract with Messrs. Riley, library bookbinders, Huddersfield. It was also decided to accept the offer of Messrs. Riley for the re-binding of about 130 volumes of newspapers and other periodicals in the Reference Department.

Inquiry into Prices.

A statement prepared by the librarian was to the effect that he had intimated to the two local tenderers that consideration of their offers had been deferred pending their reconsideration of the prices they had sent in. A few days later one firm's manager called, and in the course of conversation was shown the prices of the London firm who had been asked to bind a sample consignment. He said binding could not be done at these prices without loss, and he resented the suggestion that the Library had not been getting a reduction in prices commensurate with recent reductions in wages and cost of materials. Subsequently (on July 13th), he sent a letter reaffirming and amplifying what he had said. On the following day (July 14th), the librarian returned that letter along with a statement of the prices actually paid by the Library to the same local firms in the period of highest costs, and in the recent period when prices were falling, and invited the manager, if he still wished his letter of July 13th to go before the sub-committee as it stood, to return it, and it would be submitted to the sub-committee accordingly. To that invitation a reply was received from the one firm stating that difference in the sizes of periodicals during the war, and over-lenience in prices during the period of heaviest cost, explain the prices quoted in the librarian's statement. The other local firm replied, of date July 29th, representing that the prices they quoted were reasonable, and such as they were accustomed to receive from customers in London, Birmingham and other southern centres.

Differences in Prices.

The prices before the sub-committee were as follows:—

Half pigskin—Aberdeen prices ranging (according to size of volume) from 5s. 6½d. to 17s. 6½d.; London binder, 3s. 9d. to 13s.; Riley's, Huddersfield, 3s. to 15s.; Chivers', Bath, 3s. 2d. to 16s. 6d.

Newspaper volumes—Aberdeen prices, 41s. 7½d.; London binder, 35s.; Riley's, 24s.; Chivers', 32s. 6d.

Cloth binding—Aberdeen prices, 3s. 11d. to 12s. 5½d.; London binder, 2s. to 6s.; Riley's (full morocco cloth), 2s. 4d. to 11s.; Chivers' (full morocco cloth), 2s. 8d. to 14s.

Aberdeen Not Alone.

The librarian, in a note, points out that the Dundee Public Library had found it necessary to go outside the town with its binding, and was having it done partly in Huddersfield and partly in Bath, the binding being done in a stronger and more durable way than by ordinary binders. Glasgow and Edinburgh Public Libraries had also found it necessary to place contracts with southern binders.

CHRISTMAS and New Year puzzle cards for blind children are to be published by the National Institute for the Blind.

Introduction of Cloth Binding.

It will be remembered that publicity has been given in these columns to the statement that the binding of books in cloth was introduced in 1822 by Archibald Leighton. A similar statement having recently appeared in the *Publishers' Circular*, a correspondent wrote to that journal remarking: "There has recently come into my hands a copy of 'The Spirit of Cervantes, or Don Quixote abridged, with four coloured engravings, 18 shillings, 1820.' This is bound in a smooth-faced blue linen, with a paper label on back bearing date, so that evidently cloth was used at least two years earlier. Whether these books were bound by Mr. Leighton, of course, one cannot say."

To this correspondent's remarks Mr. Douglas Leighton replied: "There is no question that cloth, as he describes, was not in use in 1820. The explanation is very simple—being simply a case of a certain portion of the edition printed in 1820 not being bound up for some years later."

A contributor to an American trade journal, in writing on the subject of bookbinding history, has run into confusion in regard to the different branches of the Leighton family. To make the position clear, Mr. Douglas Leighton writes:—"My great grandfather, Archibald Leighton, never had any connection with the firm of J. and J. Leighton, the well-known antiquarian booksellers. His father (also Archibald) founded that business it is true, but it was always carried on by the elder branch of the family. The younger branch, represented by Archibald Leighton (the inventor of book cloth), who was born in 1784 and died in 1841, had the business now known as Leighton, Son and Hodge, Ltd. There is not the slightest doubt whatever that these are the facts. I have gone into these details rather closely, as there has been confusion between the two Archibalds, and it has even been stated that the elder was the originator of cloth. He, however, died in 1799."

A Bookbinder Mayor.

Mr. Cedric Chivers, J.P., of the well-known Bath bookbinding house of Messrs. Cedric Chivers, Ltd., having been elected Mayor of Bath, has received a cordial message of congratulation from the Master Bookbinders' Association, on behalf of whom the secretary (Mr. Hedley Miller) has written to Mr. Chivers as follows:—

"I am desired by your colleagues, the members of the Master Bookbinders' Association, to convey to you their very hearty congratulations upon your election to the Mayoralty of Bath.

"Not only are they gratified by the honour which has been conferred upon you personally, but they feel also that it is a distinction for the industry of which you have long been a leading and highly respected member.

"They accordingly cannot let the occasion pass without wishing you success and expressing their confidence that you will fully uphold the traditions of the important office to which you have been called."

Bindings Under U.S. Tariff.

There seems to have been a good deal of confusion as to the position of bound books under the new United States tariff. A modification has been made of the intended 15 per cent. upon the contents of a book and 30 per cent. on the binding, and it is now stated that bound books will, for convenience' sake, be admitted at the single rate of 25 per cent.

The strong demand from many quarters for a modification of the regulation that "Printed in Great Britain" must appear on the title-page of an imported book has apparently failed of its object. It is just possible, however, that books manufactured prior to the operation of the regulation may yet be granted exemption from this very annoying restriction.

THE Health Committee of the Joint Industrial Council is meeting this week under the presidency of Mrs. Bridge, when the whole question of the ventilation of printing offices will receive careful consideration.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

O. Blackburn and A. E. Smith, lithographic and letterpress printers, bookbinders, stationers, etc., under the style of the City Press, at Garden-street, Leicester.

S. Brindley and A. W. Masse, box and pattern card manufacturers, 16, Playhouse-yard, Upper Whitecross-street, London, under the style of Walter Barnard and Co.

Robert Murray Smith, Roderick Murchison, Sir Edward Fancourt Mitchell, Sir Lauchlan Charles Mackinnon, and William George Lucas Spowers, newspaper proprietors, 10, Salisbury-square, Fleet-street, E.C., so far as concerns Robert Murray Smith and Roderick Murchison.

Sir Edward Fancourt Mitchell, George Fairbairn, John James Falconer, Robert Officer Blackwood, Sir Lauchlan Charles Mackinnon, Allan Spowers, Lauchlan Mackinnon, Lauchlan Kenneth Scoble Mackinnon, and John Turnbull, newspaper proprietors, 10, Salisbury-square, Fleet-street, E.C., so far as concerns Sir Lauchlan Charles Mackinnon.

BANKRUPTCY ACT, 1914.
RECEIVING ORDERS.

T. Coates, formerly residing or carrying on business at 48, Gray's-inn-road, W.C., and lately residing at 4, Alderbrook-road, Clapham, journalist.

O. J. Holmes, 46, Westbourne-avenue, Bolton, printer's compositor.

S. Page, 139, Kettering-road, Northampton, and carrying on business at 22-52, Arcade, Northampton, bookseller, stationer and confectioner.

Mr. J. P. PUGH, who has hitherto represented Messrs. Spicer Brothers in Manchester and the surrounding district, will take the Manchester ground for the combined firm, Spicers, Ltd. The staff of Spicer and Sons have been transferred to Spicer Bros.' headquarters in Lower Mosley-street, and the management is shared between the respective heads of the dual concern.

DIVIDENDS AND REPORTS.

HAZELL, WATSON AND VINEY.—Hazell, Watson and Viney announce interim dividend of 4s. per share, free of tax, on ordinary, payable December 1st.

MANSELL HUNT CATTY AND CO.—Mansell Hunt Catty and Co. announce interim dividend of 4 per cent., less tax, on ordinary, payable November 16th.

THOMAS OWEN AND CO.—Directors announce interim dividend at rate of 5 per cent. per annum on ordinary shares for half-year. No interim a year ago.

NEW COMPANIES.

FOTEX WORKS (BIGGLESWADE), LTD.—Capital £10,000; to take over the business of a photographic trade printer, developer, enlarger, publisher, etc., carried on by W. H. Burditt at Biggleswade as the "Fotex Works." Private company. First directors: W. H. Burditt and Lieut. R. G. Morison.

ATRACTA ADVERTISING SERVICE, LTD.—Capital £1,500; to adopt an agreement with N. L. Robson for the acquisition of the business of an advertising agent carried on by him as the Movograph Co., and to carry on the business of manufacturers of, contractors for, and dealers in materials used in connection with displayed advertisements, etc. Private company. First directors: S. Rogers, W. R. Carr and N. L. Robson. Registered office: 26, Northumberland-street, Newcastle-on-Tyne.

GUILBERT-WENHAM PRINTING CO., LTD.—Capital £3,000; printers, stationers, bookbinders, manufacturers of, and dealers in paper and all kinds of stationery requisites, etc. Private company. A. Axtell, W. Axtell, and A. M. Hay. Registered office: 14-16, Bishop's-court, Old Bailey, E.C.4.

"SCUNTHORPE AND FRODINGHAM TIMES" CO., LTD.—Capital £2,000; to adopt an agreement with H. C. B. Richardson, W. A. Richardson and R. C. Bellamy for the acquisition of the business carried on by them as the Scunthorpe and Frodingham Times Co., and to carry on the business of newspaper and magazine proprietors, newsagents, stationers, printers, advertising agents, etc. Private company. Permanent directors: H. C. B. Richardson, W. A. Richardson and R. C. Bellamy.

KEALEYS, LTD.—Capital £1,000; printers, stationers, proprietors and publishers of newspapers and periodicals, manufacturers of novelties, advertising contractors, etc. Private company. First directors: Ethel Kealey and Mrs. Jane A. Kealey. Registered office: 2, Johnson's-court, Fleet-street, E.C.4.

INTERNATIONAL AUTHORS, LTD.—Nominal capital £100; agents for the purchase, sale or

disposal, producers, exhibitors and publishers of and dealers in literary, dramatic musical and artistic works, booksellers, stationers and publishers, etc. Private company. First directors: J. C. Graham and J. S. Martin. Registered office: 166-170, Wardour-street, W.1.

ANDRENS, CHARLES AND JAMES, LTD.—Capital £2,000; oil and colourmen, paper, paper bags, rope, cord and twine, etc. Private company. Life directors: E. J. Turnbull and F. C. Samuels. Registered office: 36 and 37, Queen-street, E.C.4.

LAW AND FALKENHEIM, LTD.—Capital £1,000; to acquire the business of an import and export merchant carried on by F. D. Falkenheim, at 226, Bishopsgate, E.C., as "Law and Falkenheim," and to carry on the business of general merchants, etc., dealers in stationery and fancy goods, commercial stationery, marbled, plain, fancy, packing and other papers, cardboard, strawboard, parchment and vellum, etc., printers and bookbinders' sundries, etc. Private company. Subscribers: F. D. Falkenheim and H. E. Funk. Registered office: Artillery House, 226, Bishopsgate, E.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

NORTHERN ART REPRODUCTION CO., LTD. (Liverpool).—Satisfaction in full on July 31st, 1920, of debentures dated April 20th, 1899, securing £2,000.

IVY MILLBOARD CO., LTD. (manufacturers of mill, leather and strawboard boxes, cases, etc., Tovil, Maidstone).—Satisfaction in full on August 19th, 1922, of mortgage dated November 7th, 1921, securing £500.

IVY MILLBOARD CO., LTD.—Mortgage dated November 2nd, 1922, to secure £500, charged on Great Ivy Mill and a cottage in Maidstone and Loose, Kent. Holder: A. F. Brooker, 4, Hartrup-street, Maidstone.

MERTON BOARD MILL, LTD.—Mortgage debenture dated October 30th, 1922, to secure £100,000, charged on mill, mill house, dwelling house and buildings in High-street, Merton, land adjoining and company's undertaking and property, including uncalled capital. Holder: The Treasury Solicitor.

W. JONES AND CO., LTD. (stationers, printers, etc.).—Two charges on 34 and 36, Cable street, Liverpool (subject to prior mortgages for £1,240 and £1,225 respectively), both dated October 26th, 1922, to secure all moneys due or to become due from company to Liverpool and County Discount Co.

F. J. PARSONS, LTD. (newspaper proprietors, etc.).—Mortgage dated November 1st, 1922, to secure £475, charged on 19, Pavilion-road, Folkestone. Holders: Hastings Permanent Buildings Society.

JOHN HIGHAM AND CO., LTD. (printers, etc., Hyde).—Issue on October 21st, 1922, of £745 debentures part of a series already registered.

WHITEHEAD AND MILLER, LTD. (printers, stationers, etc.).—Satisfaction in full on September 8th, 1922, of mortgage dated August 10th, 1920, securing £1,000.

BANKRUPTCIES, etc.

Re CLEMENT JOHN LIVERMORE, printer, 44-6, Hampstead-road, N.W.—This debtor attended at the London Bankruptcy Court on November 7th before Mr. Registrar Francke for further examination upon his affairs. He filed his own petition last July, and submitted accounts showing total liabilities £4,205 (unsecured £2,349) and net assets valued at £1,105, after deducting £178 for payment of preferential claims. Mr. Tindale Davis, on

behalf of Mr. A. G. White, questioned the debtor regarding a bill of sale, and the examination was ordered to be concluded.

Re "SUNDAY SPORTSMAN," LTD., 367, Strand, W.C.—Under a compulsory winding-up order made against this company last October the report of Mr. G. D. Pepys, official receiver, has been issued to the creditors and shareholders. The accounts filed under the liquidation show liabilities £31,685, assets valued at £3,850 and a deficiency of £30,543 with regard to the contributories. Mr. Pepys reports that the company was registered on January 26th, 1921, with a nominal capital of £40,000 divided into £1 shares, for the purpose of carrying on business as newspaper proprietors, etc. It appears to have been promoted by Mr. Dudley Perrott Sheridan. The main object for which the company was formed was to acquire and take over a weekly newspaper called the Sunday Sportsman, with which was also published another weekly newspaper called the Sunday Sportsman Special, which was principally devoted towards racing tips. According to Pugh (the secretary) the Sunday Sportsman was started by the Harrington Press, Ltd., which eventually went into liquidation. That company sold all its title and interest, including goodwill, but excepting book debts, to Sheridan on March 27th, 1920, for £200 in cash. Sheridan sold it on August 27th, 1920, as from March 27th, 1920, including all its liabilities and assets to another company, called the London United Press Co., Ltd., which in turn assigned the business, goodwill and copyright to the company under an agreement made on January 28th, 1921. The liabilities to creditors include the balance of the purchase money due to the London United Press Co., Ltd., viz., £16,550, £3,988 stated to be due to Bar-gate in respect of money advanced, £1,019 2s. 3d. due to the bank and £250 6s. 7d. owing to contributors to the newspaper. The balance is in respect of ordinary business debts. As the result of statutory meeting of creditors and contributories, held on July 4th, 1922, Mr. Albert Willmott, of 14, Old Jewry Chambers, E.C.2, chartered accountant, has been appointed liquidator of the company, with a committee of inspection. All communications regarding the realisation and distribution of the assets should be addressed to him.

Re SUNDAY PUBLICATIONS, LTD.—Tenders are invited for the purchase of the copyrights of the two newspapers, Sunday Illustrated and Sunday Sports Telegram.

THE *Annuaire de la Papeterie Universelle*, which is just issued, attains its 42nd year. It is a substantial volume of 714 pages and is a useful guide to the paper industry of the world, but especially of France. The volume is carefully classified. In addition to the alphabetical list of French paper firms, there is an arrangement according to districts and descriptions of paper, together with a list of paper users. Thus in one way or another any firm engaged in the pulp, paper, or printing business in France can be looked up. A special section at the end of the volume contains an index to the paper firms of all the foreign countries. Thus the *Annuaire de la Papeterie Universelle* fulfils its purpose as a guide to the paper industry of the world. It is stoutly bound in cloth boards and the general arrangement facilitates reference.

He who can at all times sacrifice pleasure to duty approaches sublimity.

Stationers' Social Society.

Eleventh Annual Autumn Dinner Creates a Record.

Another record was made by the Stationers' Social Society on the 3rd inst., when the eleventh annual autumn dinner was held. This function is confined to the members of the Society and their male friends, and it was no little achievement to fill the large King's Hall at the Holborn Restaurant. The gatherings of the Society, however, are always so congenial and pleasant that there is no difficulty in getting support for them. Friday's gathering was attended by 270 gentlemen, a record for this particular fixture, the number exceeding even the record put up last year, when 230 members and their friends were present. As usual, the social element predominated, the chief consideration being the agreeable entertainment of the company. No effort had been spared to make the arrangements as complete as possible; and these had been made with such painstaking care, that everything passed off smoothly and satisfactorily.

The president of the Society, Mr. Lionel Savory, received the members and guests as they arrived, and an opportunity for social intercourse was provided before the company sat down to dinner. As for the dinner itself, it was, of course, excellent, and so much trouble had been taken with the arrangement of the tables that everyone found himself in congenial company.

Directly the dinner was over and the toast of "The King" had been honoured, the company settled down to enjoy the musical programme and the short toast list which interspersed the items. The musical arrangements were again under the able direction of Mr. George E. Oswick, whose efforts were cordially appreciated. The artistes who entertained so well were: Misses Nellie Walker (contralto) and Helena Millais (entertainer) and Messrs. Ceredig Walters (baritone), E. Stepan (son-in-law of the late Mr. Burgess, tenor), Jock Walker (humorist), Fred Curtis (humorist), Rupert Hazell (entertainer) and Ralph Stanton (at the piano).

The Toast List.

As customary at the Society's dinners, the toast list, apart from "The King," was officially restricted to "The Chairman" and "The Visitors," and the speakers generally observed the dictum that "brevity is the soul of wit."

Mr. George E. Oswick (Reed and Smith, Ltd.), was responsible for the toast of "The Chairman." He was sure that they all agreed that Mr. Lionel Savory had fully justified the confidence shown by the members of the Society when they unanimously elected him to occupy the position of president. (Hear, hear.) Few of them would covet such an office when they realised the number of calls which were made upon the president and when they remembered that he had been preceded by such men as Mr. P. W. Kennett and Mr. W. Horsburgh. To occupy the presidency of that Society a man needed to possess dogged determination. Mr. Savory had shown them that by dint of hard work and honest endeavour it had been possible to imbue the Society with renewed life and

vigour and make it worthy of its objects. The membership roll included, he believed, every member of the paper trade and they were all pleased to be associated with Mr. Savory. Their president had taken a live interest in the golf and bowling tournaments which had been held with such success. The qualifications for a president of the Stationers' Social Society were numerous, and Mr. Savory possessed them all. Such a man should possess strong personality and be well known and popular in the paper trade. He had also to be prepared to devote a certain amount of time in attending committee meetings, and he must be ready to give time and thought in devising ways and means so that the members might have complete enjoyment of the various functions. In this connection Mr. Oswick paid a tribute to the excellent services rendered by the secretaries. Another important qualification for a president was that he should embody the soul of brevity. This reminded him (Mr. Oswick) that he should take a pattern from their president's book. (Laughter.) Apropos of that, he should like to say that if there was any wholesale stationer present he must admit, perhaps for the first time, that a papermaker had matched his pattern (Laughter and applause.)

The toast was accorded musical honours, with a special ovation for Mrs. Savory.

President's Speech.

Mr. Lionel Savory, who was cordially greeted on rising to respond, said that to any man who had been in the paper trade so long as he had and whose best and oldest friends were all members of the paper trade, it was a great compliment to be asked to occupy the presidency of that Society. They had heard from Mr. Oswick the characteristics that were necessary for a good president. Well, he had always looked upon every member of the paper trade as being a truthful man, but with all due respect to Mr. Oswick he was afraid he could not lay claim to all the attributes mentioned by the proposer of the toast. In his early days it had been knocked into him by one of his old governors that it was policy never to do a thing for himself that he could get some one else to do for him. Since he had been the president of the Society he had really done very little. He was particularly indebted to the committee and to the two secretaries (Mr. Mist and Mr. Johnston) for the excellent support they had given him and for the trouble they had taken in relieving him of the detail work. He could only advise the gentlemen who might follow him to do as he had done, that was to sit quietly at the committee meetings and enjoy themselves, because the secretaries, with very little assistance, would look to everything and do far better than any president could do. Therefore he should like to tender his thanks to the secretaries for their invaluable services. They had organised that dinner as they had arranged every other function with every care.

The president called attention to the social evening which will be held by the Society at Stationers' Hall on November 24th, when he hoped there would be a large attendance. What pleased him particularly in the gathering that night was the number of young men who were present, and he desired to see them and their lady friends at Stationers' Hall, where there would be dancing for the young people and whist for those who preferred that form of recreation.

Presentation of Cups.

At this stage Mr. Savory presented the cups won during the summer in the golf and bowling competitions. In handing the Horsburgh Challenge Cup and replica to Mr. T. C. Bailie, Mr. Savory said the Society owed a deep debt of gratitude to Mr. Horsburgh, the donor of the cup. They were also indebted to Mr. Woollacott for the gift of the handsome bowls challenge cup, which this year, together with the replica, was won by Mr. H. J. Burholt. Commenting upon the advantages of the competitions, the president pointed out that they enabled members of the trade to meet together under pleasant conditions. They had the particular advantage of letting an awkward customer realise that the agent was not such a bad fellow as he might think he was. In golf and bowls it was possible both to play the game and at the same time to manage to lose it. (Laughter.) In this connection Mr. Savory recalled the indiscretion of a Scotsman, who, being drawn against one of his best customers, was thoughtless enough to beat him in the first round. (Laughter.) They might perhaps have thought it possible in the case of a Southerner, but from a Scotsman such indiscretion was very unexpected. (Renewed laughter.)

The Visitors.

Mr. Davidson (Messrs. C. Davidson and Sons, Ltd.), proposed the toast of "The Visitors," which he considered a privilege on such an occasion. Without visitors, that function would be very slow indeed. He remembered a dinner of the Society some years ago when they had only two or three guests; but everything had changed since then. Their meetings were always bright and cheerful, and that change, he thought, was due in great measure to the presence of so many guests, whom they cordially welcomed. (Applause.) If their guests had enjoyed themselves as much as the members had, then they were all very well satisfied. (Cheers.) He coupled with the toast the names of Mr. J. S. Allen (Allen, Strong and Co., Ltd.), and Mr. H. E. Poole (the English representative of Messrs. B. J. Ball, Sydney).

Mr. Allen, in reply, said it was very pleasant indeed to be one of the visitors that night and to enjoy the geniality and hospitality of the Stationers' Social Society. He complimented the Society upon its growth since he had last attended the autumn dinner. In one thing the Society had not altered and that was in its generous entertainments. The speaker only hoped that when he put in his application to the committee to be enrolled as a member that they would receive it with kindly consideration. (Hear, hear.)

A Guest from Australia.

Mr. H. E. Poole said he had come probably the longest journey of any of the guests, namely, from Australia, a distance of 13,000 miles. He came with a certain greeting that was expressed by one member of a great family to the other members of the same family, the greetings of Australia to England. (Applause.)

Before the gathering closed the president proposed the health of Mr. Oswick, which was accorded musical honours.

MESSRS. A. O. WRIGLEY AND Co., have moved from Queenhithe to more convenient offices at 91, Queen Victoria-street, London, E.C.4.

PLEASE NOTE.

WE CAN

quote you very low prices for all styles of binding in Cloth, Leather, or any other material, also for Portfolios, Cases, Loose Leaf work, Reading Cases, and the like to any design you may require and on the shortest notice.

Should we be favoured with an enquiry it shall receive our best attention, and if you require any samples we shall be pleased to forward same, and if deemed necessary to offer any suggestions.

We feel sure our prices will prove advantageous to you, and that you will have no fault to find with the workmanship, which we are confident will please.

Rubber Latex in Paper.

Developments of the Process.

The following is the concluding portion of Mr. Kaye's paper which he read before the Technical Section of the Papermakers' Association in Manchester, on Thursday, October 26th:—

From experiments it is seen that small proportions of rubber latex can affect the strength of half-stuff materials even by the thorough mixing with the pulp and the coagulation of the rubber upon the fibres. It is only fair to remark that the latex paper in these experiments was hand-made, while the comparison half-stuff was machine-made.

I have however done a lot of comparative experiments with partially beaten fibre and made this into hand-made paper with, and without, latex, when it has been shown that the physical qualities of the latex paper, especially the bursting strain and folding number were much above those of paper made under exactly comparable conditions but without rubber latex.

I am of the opinion that in the manufacture of many new classes of goods containing higher proportions of rubber, especially such qualities as may take the place of leather, certain strong fibres such as sisal hemp, manilla hemp and jute, may be used as half-stuff or beaten in such a way that the fibres will remain long, and, therefore, with a relatively high rubber content we can manufacture very pliable and strong material suitable for many new uses.

It will also be possible to use many grades of waste paper, with suitable proportions of rubber, and the pulp being dyed beautiful colours, which, when made into a heavy substance, will make splendid materials for bookbinding, as the texture of the surface will have a pleasant appearance and touch. These qualities can be embossed to represent leathers or textile fabrics. The folding number can be made to reach a high figure. For example: a fairly thick brown paper recently made in a mill containing 40 per cent. soda wood, 60 per cent. very cheap paper and only 0.2 per cent. of rubber, had an average folding number—cross-ways of 3,345.

I have also experimented in the re-pulping of the *Daily Mail* and with comparatively small proportions of rubber latex I have found it quite easy to make a product more than twice as strong as the original paper.

Original "Daily Mail" Paper. "Daily Mail" Paper Repulped with Rubber Latex.

Tensile strength 444 gms. per sq. mm ...	1,070 gms. per sq. mm.
Bursting strain 4.8 lbs. per sq. in. a thickness 0.1 mm...	10.2 lbs. ditto
Folding number ...	35

These experiments appear to show that newspaper stock will make good material for improvement to be effected by the use of rubber latex in the manufacture of the original material.

Waste Leather Paper with Rubber Latex.

I have been able to make many experiments using fine leather waste along and in combination with ordinary papermaking fibres, and improving the paper or leather-paper made by the use of rubber latex.

Recently, attention has been devoted by

other workers to the compounding of waste leather with, and without, other fibres, with rubber on an ordinary rubber compounding machine where 25 to 30 per cent. of rubber has been used. I have tested the tensile strength of many of these compounds, even after vulcanisation, and find they are much weaker than the leather waste compounds made on a papermaking machine and using rubber latex to give a rubber content of, say, 4 per cent.

Thus while the average tensile strength of the leather compounding with 25 per cent. rubber was 256 gms. per sq. mm., a leather could be made four or five times as strong with a rubber content of say 4 per cent.

Asbestos Paper and Millboard.

There is a great future for the use of rubber latex in the manufacture of asbestos paper and millboard, as well as asbestos packing, because rubber can readily be compounded with asbestos fibres and fillers in the beater and the product run on the papermaking machine in the ordinary manner. In this way it will be possible to make asbestos packing more cheaply as no expensive solvents will be needed, for these have at present to be recovered at considerable danger and cost. In this way a minimum quantity of rubber can be used.

Linoleum Substitutes.

There is a big field for the manufacture on a board type of machine of thick material—several millimetres thick—made from mechanical wood, wood dust, mineral fillers such as china clay, together with considerable proportions of waste paper, with varying percentages of stronger fibres, and higher percentages of rubber latex to give a rubber content of 10 per cent. to 30 per cent. or more. These goods can be dyed beautiful colours, and, by another invention of mine, I am hopeful to be able to produce designs by the inlaying of colours upon the foundation layer. Similarly such products may be used for wall covering and the like.

Paper Boards, Leather Boards, etc.

The introduction of varying percentages of rubber latex into boards will effect a great improvement in many classes of boards. The cheaper type of boards such as straw-boards will be made to bend without breaking, and the water-proofing qualities of the boards will be much improved.

The increased pliability of leather-boards will greatly extend their uses.

Boards used for building purposes and for the manufacture of boxes, containers, furniture and even motor cars, etc., can be much strengthened and improved in texture and finish by the use of rubber latex.

Experiments in Paper Mills.

Many commercial experiments in mills, making different classes of paper, have been successfully put through and many more mills are arranging for experiments. Now that large supplies of latex will soon be delivered in London the manufacture of latex paper and boards will quickly assume considerable dimensions. The large buyers of paper at home and abroad are eager to get in touch with the makers of many grades of

paper made with the use of rubber latex. The effect of different coagulants upon the strength of the resultant paper is a matter for experimentation.

In most cases it appears desirable to use alum as it is already in use in the ordinary papermaking processes, and therefore no new factor is introduced. Where, however, the paper has to be made without size, other coagulants may be experimented with. I have tried many comparison experiments, using acetic acid, alum, and magnesium sulphate, and, in these experiments the paper where the rubber was coagulated with magnesium sulphate was the stronger.

Such paper produced in the water-leaf can afterwards, if desirable, be tub-sized in the usual manner.

The effect of the quantity of latex used upon the strength of the paper ought to be carefully investigated.

Durability of Latex Paper.

It has been repeatedly demonstrated that latex rubber, that is, rubber which has been first coagulated, dried, and then masticated for ordinary rubber compounding is much more durable than the ordinary rubber of commerce, also that garments made water-proof by means of rubber latex by the natives of South American rubber growing countries, have remained perfectly sound as far as the rubber is concerned after over 100 years. The rubber is found to be in a better condition than the woven fabric.

Vulcanisation of Latex Paper.

The question of the vulcanisation of latex paper products, containing higher percentages of rubber, is being carefully studied and investigated.

As most of the latex paper made will contain small proportions of rubber and this is in the latex or durable form, such paper will not need any further vulcanisation. I have, however, worked out a process for what I call "self-vulcanisation," and I am hoping that by this method paper, needed to be vulcanised, will be in a sense vulcanised during the process of manufacture. This method will be laid before the industry in due course.

I trust, gentlemen, that by the application of rubber latex to papermaking we shall amazingly enrich the opportunities for improving and cheapening paper production, but we shall also find great new fields for the adventuring of the commerce and industry of papermaking all over the world.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

The Wages Problem in London.

Strong Action Authorised by Special Meeting of the London Master Printers' Association.

A special general meeting of the London Master Printers' Association was held at Stationers' Hall on Tuesday last week, as briefly announced in our last issue.

Lieut.-Colonel Truscott, who presided, opened the proceedings by extending a hearty welcome to the new president of the Federation (Mr. R. A. Austen-Leigh). He went on to refer to the wages position in detail. He mentioned that a figure of 6s. had been agreed to by some of the unions, along with stabilisation to the end of December, 1923. However, the Paper Workers' Union, the N.S.O.P. and A. and the Correctors of the Press had declined to accept it, whilst the Machine Managers' Society was holding a meeting on the subject. The president observed that a little more firmness a few months ago among master printers would have given them a reduction of 12s. 6d. (Hear, hear). Whilst he did not for a moment think that 6s. would save the jobbing trade of London, it would help them to take something off the accounts of the long-suffering customers.

The Resolution.

The president then moved the following resolution:—

"That this meeting of members of the London Master Printers' Association endorses the agreements between the L.M.P.A. Council and the L.S.C. and other accepting unions for a wage reduction of 6s. per week in two instalments, namely 4s. on the pay-day in the week ending December 9th and 2s. on the pay-day in the week ending January 6th, 1923, with stabilisation until the end of December, 1923; and authorises the Council to arrange for the posting of notices by members of the L.M.P.A. to enforce these terms upon the members of those unions which have not yet accepted them.

"The Council are requested to make it clear in these notices that workers who are not willing to accept these reductions but prefer to leave work rather than accept them will not be at liberty to return to their present employment until they are prepared to accept a reduction of 12s. 6d. per week."

Colonel Truscott mentioned that the open houses were anxious to set up a different standard of wages from that of the union houses, and they had been informed by the Council that they should pay to their society employees the Federated Trade Union rates recognised by the L.M.P.A. In concluding his speech, the chairman observed that his successor as president (Mr. W. Howard Hazell) had most kindly consented to take office from February 1st.

Mr. A. Langley seconded the resolution and paid a tribute to the hard work which the

Council had put in in connection with the wages question.

Position of the Open Houses.

Mr. Poulton set forth the position of the open houses, and mentioned that the Open House Committee had thought the best attitude to adopt with regard to the resolution was to abstain from voting altogether. The reason for this was that the resolution was really a bargain between the union houses and the unions. It was the object of the open houses to get together with a view to setting up an open house rate, which would obviously be a higher rate than the one indicated in the resolution.

Mr. W. L. Sidders maintained that a reduction of 6s. only was not going to keep the business of the non-union houses in London and the work was bound to go to the country. He went on to refer to the danger of different arrangements being made by individual houses. It would be far better if the open houses would organise in order to obtain a sensible, reasonable rate that would keep work in London.

London and Country Rates.

Mr. Pollock, who paid a tribute to the work of the Council in the long and arduous negotiations which they had conducted, pointed out that from the point of view of the open houses there was very deep dissatisfaction with the state of the wages question in London. He was anxious that the members of the Association should stick together. He went on to refer to the difficulties which master printers had in explaining prices to their customers, who told them they were not reducing their prices to the extent that other industries were doing. For instance, other staple industries of the country had made reductions to the end of September reaching from 24s. to 45s. per week per man, whereas the master printers had only 5s. to show in the case of compositors as yet. The open houses were anxious to do something to save their businesses, and he hoped there would be a meeting which would make a rate that would allow them to keep their houses open. He referred to the difference in the position of London as compared with the provinces. In Edinburgh and Glasgow, for instance, the present rate was 80s. 6d., and a further 5s. was to come off that. In grade 1 towns the figure was 81s., and a further 3s. was to be deducted in May. In grade 6 towns the present wage was 64s., from which there was to be taken a further 3s. 6d. Against these rates they would be paying in London 89s., and he asked how they could face such competition as that.

Mr. Northam asked how many of the open

houses at the present moment were paying the full trade union rates for the average skilled mechanics, and he asked if the 6s. reduction would include the rulers and the people who had had two reductions in their wages.

The president remarked that these were not included, as they were covered by the Federation agreements.

Sir Wm. Waterlow's Support.

Sir William Waterlow strongly supported the resolution, although he regarded the reduction as totally inadequate. The Council had to make the best of the position as they found it, and in the circumstances he thought they had done as well as was possible. Speaking for himself, he said the higher wages they could pay in London, provided they did not kill their business, the better it was for them. (Hear, hear.) There was, however, such a large difference now between the London and the provincial rates that it was going to damage their business. With regard to the attitude of the open houses, Sir William pointed out that they had no proposition to put before the meeting.

Mr. T. Cumner moved an amendment, "That this meeting is not prepared to accept the proposition moved by the Council, or to do anything in the matter until the trade is more combined."

There was no seconder to the amendment.

Mr. Poulton, referring to the observations of Sir William Waterlow, mentioned that the open houses were concerned about those printing establishments which had country branches, and pointed out that the London houses with no country branches had to exist in the face of country competition.

Mr. Burt stated that the London Council was made up equally of employers representing non-union and society houses. He thought it was very unfair of the non-union houses to come there with their opposition when they had sat on the Labour committee all the time and on the Council, where they could have voiced their opposition to the proposed course of action.

Mr. Collingridge said it was his intention to vote for the resolution, first, because they had appointed a committee to undertake the negotiations, and, in the second place, because half a loaf was better than no bread.

The resolution was then put to the meeting and carried *nem con.*

The President, in conclusion, said that the notices which would be issued that night consequent upon the passing of the resolution only concerned the Association of Correctors of the Press and the Printing Machine Makers' Trade Society.

Modern Book Production.

Lecture by Mr. C. T. Jacobi.

As is usual in his addresses, a large amount of interesting and useful information was crowded into the lecture before the Society of Bookmen delivered on the 7th inst. by Mr. Chas. T. Jacobi, late of the Chiswick Press and now acting as printing consultant.

Mr. Jacobi began by recalling his having given a similar address in 1893 to the Bibliographical Society, William Morris having on the same occasion dealt with the earlier period of printing. The speaker went on to acknowledge the benefit conferred on the art of printing by William Morris and by other workers with private presses—Cobden-Sanderson, Emery Walker and C. H. St. John. He also recalled that the second Charles Whittingham was responsible for the renaissance of printing in early Victorian days, in collaboration with William Pickering, the bookseller and stationer.

Points in Book-Designing.

Mr. Jacobi proceeded to indicate some of the factors to be considered in designing a book, some of the many points made being the following.

A volume, devoid of all decoration, may be made quite an artistic piece of work if a discriminating care is bestowed on the different points that go to the making of a well-designed book. The precise choice of a suitable fount, of type of the right size, should be largely determined by the nature of the work, the size of the page, and the desired length of the volume. If a work is to be either decorated or illustrated, these embellishments should, to some extent, govern the character of type to be employed, so that there may be some harmony between letterpress and picture. If the volume is to be without decoration or illustrations there is a larger field of selection as regards type.

As a general rule, for all works, up to and including octavo size, it is better to use a large fount with little or no leading than to employ a small type with the lines too much spaced out. For quarto and folio books where the width of the page is increased in proportion the lines may be spaced farther apart with leads, which will render the reading less fatiguing and assist the eye in taking up the sequence of the following lines. The size of type having been selected, and the question of leading or non-leading determined, the next step is to consider the dimensions of the type page in relation to the size of the book itself—that is, the proportion of the printed page to the leaf of paper, and the position of the printed page on the paper. When this is obtained the two open pages of the book must also be considered together, not one page only.

MS. and Proofs.

The speaker said he wished to impress on authors the great importance of a proper preparation of the MS., or "copy." Many works, he said, are placed in the printer's hands with little consideration for the compositor's trouble in deciphering the copy supplied, or for the pocket of the publisher when he has to pay for the resulting corrections and alterations. These have always been a matter of contention between author, publisher, and printer, and it is best, if possible, to steer clear of any complications in this respect. "A stitch in time saves nine" is an old proverb, and is one very aptly applied to typography, for a simple correction or alteration, if made in time, may save many when it arrives at the proofing stage.

With regard to proofs in "galley" or in sheet form, Mr. Jacobi said he would advise, as far as possible, dispensing with slip proofs, to save some expense. If the text of a book is illustrated, it is almost a necessity that galley proofs should be supplied, so that the author may indicate where his blocks shall be placed—this may often be done better in proof than in MS. Again, if it is not convenient to revise the work in MS. form, and the corrections and alterations are likely to be somewhat extensive, the cheaper plan is to have the proofs in slip. The necessary emendations and excisions can then be made with less trouble, and the time afterwards consumed in paging will be more than compensated for by the comparative facility with which these alterations may be effected.

Stressing the importance of a good index, the lecturer said the index should be made by the author or editor, or by someone conver-

sant with the subject of the work—otherwise a meagre or incorrect index may be the result, and this is generally more provoking than the absence of one. He strongly impressed on all the importance of making it from the final proofs, or from a set of sheets as printed off. When proofs of an index are supplied, every reference should be verified with the work itself, in order to secure the strictest accuracy.

Choice of Paper for Books.

With regard to the selection of a suitable paper, he continued, the character of type must first be consulted. As one would not put new wine into old bottles, so a modern faced type must not be put on old paper. And this rule applies, but in a lesser degree, to old type on new or modern paper, unless this is a machine-made one of an antique character. The intermediate class of type, that called the "revived old style," might, however, be employed on most kinds of paper without fear. A hand-made paper is, without doubt, the most enduring, but its cost renders it somewhat of a luxury. If the printing number is a small one, and the price of the book high, this question need not weigh very seriously, because the difference of expense between a machine-made paper and that made by hand would be comparatively small when divided over each copy of the work. On the other hand, these papers are not always adapted for printing books that have illustrations incorporated in the text, and to roll the surface of the paper to receive the impression would be to destroy its texture. A way out of the difficulty, if cost is a secondary consideration, would be either to print the small illustrations on india paper and lay them down afterwards, or to group them together and print as separate plates on a suitable paper.

For ordinary purposes, machine paper answers very well, and, in the long run, the better qualities are the cheaper. There is practically, or was in pre-war times, no end of choice in this class of paper in respect of size or shade. It is simply a matter of individual fancy whether the shade be white, creamy or toned. Thickness has to be studied—a stout paper being clumsy, and handling very "boardy"—an expression usually applied to cardboards. A volume, especially a small one, on too thick a paper, is a thing to be avoided.

Calendered machine papers are not pleasant to the delicate touch of the book lover, and, moreover, have the effect of making a thinnish volume unpleasantly heavy in proportion. Their use, however, is inevitable in certain classes of work—those having blocks by the half-tone process.

In addition to these papers we have others for the printing of illustrations, and these are inartistically called "art papers." They answer admirably for effect in bringing out the illustrations, but I feel sorry for posterity, for surely such paper cannot preserve its dazzling whiteness for any length of time. Some chemical action will probably be set up, and "foxing," in the ordinary sense, will be but a mild form of complaint or disorder, in comparison with their probable discoloration.

There are now several mould made papers of an antique character which are very good, and are a close imitation of those made by hand; in fact, when a sheet is folded up it almost requires an expert to discriminate between the two. The cheaper kinds of machine-made papers should be avoided; they are brittle, and crack easily—a defect due to a large percentage of wood and foreign materials. This is particularly noticeable when the corner of a leaf happens to become turned down.

Choice of Inks.

One other very important point, remarked Mr. Jacobi, is the quality and density of the black ink used for printing. Here, again, the best is the cheapest, for common inks are often cheap and nasty. There is also much waste in connection with their use, and to anyone who can appreciate a good ink it is exceedingly unpleasant to see a poor one used. The worst feature of an inferior ink is its want of "colour," the absence of brightness and solidity being very marked. Besides, a poor ink has very vanishing properties, and in course of time the printing assumes quite a brownish hue—very detrimental to the appearance of a fine book.

Points About Binding.

The lecturer next touched briefly upon the subject of binding. The proper folding of the sheets should, he said, be insisted on, and the use of wire for sewing should never be per-

mitted for books. This method has a tendency to cut the sheets, and to rust in course of time. The result will be iron-mould marks on the printed sheets. Wire, if used at all, should only be tolerated for pamphlet work. With regard to covering, there are three methods:—(1) paper boards; (2) cloth or buckram cases, as usually adopted by publishers; (3) proper binding in leather, either whole, or in half or quarter style as they are termed. If books are done up in either of the two first styles, as a tentative method of binding, uncut edges should generally be insisted upon, but if they are intended to be read at once, and not preserved, the leaves can be cut open. For temporary bindings the letterings should be as brief and explicit as possible, with little or no ornamentation.

A FRIENDLY SOCIETY FOR THE PRINTING AND ALLIED TRADES

The Association provides Benefits for those engaged in the above trades consisting of—

Unemployment Benefit.

An allowance of 22/6 per week for 20 weeks in the year. State Benefit paid through the Association in addition. Employment Registry Conducted.

Funeral Benefit.

A Benefit of £20 payable at death through any cause after one year's membership. One-third may be claimed on the death of a Member's wife. No Medical Examination.

Superannuation Benefit.

An allowance of from 6s. to 10s per week for life according to number of years' membership on claiming.

The Subscriptions are lower than those of any similar Society. There are no Levies or Fines. Members are accepted up to 55 years of age. Female applicants are welcomed. Membership includes Clerical Workers, Salesmen, Stationery Assistants, Compositors, Machine Menders, Readers, Lithographers, Operators, Rulers, Cutters, Overseers, etc. Further particulars and Application Forms may be had upon request.

Trade Notes.

POSTING OF NOTICES.—The London Master Printers' Association reports that—in regard to their call to members to post notices of wage reduction, as agreed at the special general meeting—large, medium and small houses (including some of the leading periodical and weekly newspaper printers) have already in encouraging numbers led the way in the posting of notices, and that up to date no less than 80 firms have taken this course who were not among the 400 to do so on the last occasion. Notices are being posted this week with reference to members of the N.S.O.P. and A. and the Paper Workers.

PARTNERSHIPS DISSOLVED.—Among the week's partnerships dissolved are those between H. Hartley and H. Empson, trading as Hartley, Empson and Kerfoot, at 183, Princess-street, Manchester, printers, stationers and bookbinders; and E. W. Hallam and R. W. Bird, advertising agents at 244, High Holborn, London, under the title of Robert Watson and Watson's Advertising Agency.

STEREOTYPERS' AND ELECTROTYPERS' AUXILIARY.—On behalf of this important auxiliary in connection with the Printers, Pension Corporation, Mr. W. J. Light has agreed to preside at a bohemian concert to be given in aid of the funds of the Corporation, at Anderson's Hotel, Fleet-street, on Monday, December 4th, at 6.30 p.m.

LINOTYPE AND MACHINERY LIMITED will be exhibiting their latest composing, letterpress, and lithographic machines at Tudor House, Cornwell-street, Livery-street, Birmingham (close to Snow Hill Station) from Monday, November 20th to Tuesday, December 12th. The exhibits, which will be on view from 10 a.m. to 6 p.m. on Mondays to Fridays, and from 10 a.m. to 1 p.m. on Saturdays, will include two of the latest linotype models with improvements to date, a Miehle press, and an L and M offset litho rotary.

The Gilbert-White Fellowship paid an interesting visit to the Stationers' Hall on Saturday, when Mr. Chas. T. Jacobi gave an address on the history of the Company since its incorporation in 1556. He afterwards conducted the party round the Hall, Court and Stock Rooms, pointing out the various objects of interest.

DURING a serious fire on Saturday morning at a garage at Bathgate, near Edinburgh, the printing office of the *Westlothian Courier* was set on fire on three occasions, but fortunately little damage resulted.

MR. HERMAN DAREWSKI, music publisher, of Charing Cross-road, was publicly examined at the London Bankruptcy Court last week on accounts showing total liabilities of £64,659, of which £52,045 was unsecured and expected to rank, against assets estimated by Mr. Darewski to produce £338.

A LIBEL action brought by his Highness Vossough-ed-Dowleh, formerly Prime Minister of Persia, against Messrs. W. Blackwood and Sons and the Hon. J. M. Balfour, was mentioned in the Lord Chief Justice's Court on Tuesday, and, after apologies had been tendered, the record was by leave withdrawn.

MR. STEPHEN GWYNN, author, of Temple Hill, Terenure, Dublin, having sued Mr. Daniel O'Connor and Mr. H. J. Gripper, publishers, of Great Russell-street, London, to recover the sum of £100 under an agreement by which defendants undertook to publish a book written by plaintiff, entitled "A History of Ireland," defendants denied liability and counterclaimed for damages for breach of contract. It was eventually agreed that defendants should pay plaintiff £100 on his delivering the proofs of the work, and that the question of damages and costs should stand over.

JOHN GEORGE CHIPCHASE, printer, and his son John were sentenced at Durham Assizes to two months and one month respectively, both in the second division, for conspiracy to obtain a passport from the Foreign Office by false pretence at Darlington.

The Federation of British Industries is to inaugurate a British section at the Canadian National Exhibition to be held at Toronto next year, and will undertake all the preliminary work of arranging British exhibits.

A MAN giving the name of Ivan Glavadoviz, has confessed at San Francisco to a charge of uttering £100,000 of counterfeit Bank of England notes, of which £1,400 have already been cashed by local banks.

PRINTER'S VALUABLE ERROR.—Two Spanish postal stamps, dated 1851, have been bought for an American collector at about £2,000. Although of different values, they were printed, owing to an error, on the same sheet.

MR. AUSTIN BRERETON, author and journalist, has died at Chipperfield in his 61st year.

MR. JOHN TRENT, a well-known Isle of Wight journalist, died at Ryde on Friday.

THE death has occurred, at Edinburgh, of Mr. Jacob Rosenbluth, retired publisher's bookbinder.

THERE passed away on Monday, at Lewis-ham, Mr. Samuel Vincent Marsh, for many years on the staff of the *British Medical Journal*, in his 80th year.

THE death has taken place at St. Annes-on-Sea of Mr. John H. Pilling, chairman of the North of Ireland Paper Mill Co., Ltd., aged 67.

MR. GEORGE BRONSON HOWARD, the well-known American journalist and playwright, has been found dead in a gas-filled room at Los Angeles.

JAPAN loses a prominent British journalist by the death of Mr. Robert Young, founder and editor of the *Japan Chronicle* and one of the best-known personalities in journalism in the Far East. Prior to his going to Japan in a journalistic capacity in 1888, Young was an apprentice at the printing office of Messrs. Spottiswoode and Co., who afterwards employed him as reader on the *Saturday Review*, which they then printed.

MR. BENJAMIN COLLINS, of Cheriton, Yarmouth, I.W., bookbinder, who died on August 29th, left £15,353, of which £13,284 is net personalty. The testator leaves £3,000 to the Bookbinders' Pension and Asylum Society, Ball's Pond-road.

THE late Mr. Frederic William Dickinson, of Blackheath, for 20 years chief editor of *Reuter's Agency*, left £9,887.

A STRIKE of compositors has been called at Geneva and Lausanne. In the last-named town the proprietors of the newspapers have decided to publish a newspaper in common for the duration of the strike, to be entitled *La Presse Lausannoise*.

THE proprietor of the well-known Madrid daily newspaper A.B.C., Señor Luca de Tena, has purchased, for the sum of one million pesetas (£40,000 at par), the morning newspaper *El Liberal* and the evening newspaper *Heraldo de Madrid*.

GERMAN toffee manufacturers are wrapping their candies in 40-pfenning notes—worth in pre-war days about 5d. "There is no attempt at gambling in this matter," says the *Confectionery Journal*, "in the ordinary sense of a trade lottery; it is simply that that form of paper is cheaper than tinfoil."

THE case of Mrs. Stan Harding, the British journalist who was imprisoned by the Russian Soviet Government, was the subject of an appeal last week by the Institute of Journalists, which urged upon every Parliamentary candidate that the British Government should protect its subjects from gross outrage at the hands of foreign governments.

AMONG the principal imports of Bulgaria are paper and paper goods, which in 1921 represented 131,092,000 levas.

THE latest addition to the business man's reference library is a work entitled "Notable Londoners," a miniature "Who's Who" of Londoners in the official, professional and commercial worlds. Issued by subscription in elaborate morocco gilt, it contains some 700 pithy business biographies, illustrated by excellent half-tone portraits. In the section devoted to "Printers and Stationers" the following names appear: W. J. Barwick (director Messrs. Truslove and Harrison), Sir G. Rowland Blades, Bart., J.P. (chairman Blades, East and Blades), Captain Wilfred Vincent Brooks, M.C. (manager and director Vincent Brooks, Day and Son, Ltd.), W. H. Burchell (governing director the Caxton Press, Ltd.), H. C. Houghton (director Waterlow and Sons, Ltd.), F. P. Impey (managing director Morland and Impey), H. A. Mead (senior partner Fuller and Mead, Ltd.), G. F. Pulman (managing director George Pulman and Sons, Ltd.), S. J. Sandle, C.C. (partner Sandle Bros.), P. M. F. Robertson (director Dobson, Mollie and Co., Ltd., Edinburgh), Walter Spalding (director Spalding and Hodge, Ltd.), Clifton Tollit (Messrs. Tollit and Harvey, Ltd.), Edgar Lutwyche Waterlow, M.A. (joint managing director Waterlow and Sons, Ltd.). The volume is issued by the London Publishing Agency.

Trade Union Matters.

TRADE showed no tendency to improve during last month, reports the London Society of Compositors. In fact, there were rather more members of the L.S.C. out of work at the end of the month than at the beginning. "The General Election should have some effect in stirring up business; but the publicity period of the election is all too short from the point of view of the printer, who would prefer three months' notice to one of three weeks. It would also have been better at some other period of the year than just before Christmas."

THE London Society of Compositors figures at the end of October showed 1,198 men were signing the unemployment book, this figure comparing with 1,234 in the corresponding week of 1921, and 535 in 1920. The overtime returns for the last complete month show a total of 56,145 hours worked by the general trade and 11,705 in the news departments, a total of 67,851 hours, against which has to be set a total of 733 hours lost. The number of men working overtime was 4,882 in the general trade and 1,067 in the news.

THE quarterly report of the Leeds Typographical Society states that following upon the resumption of work after the national dispute there was a slight improvement in the unemployment figures. At the commencement of the quarter 94 men were signing the unemployment book, this figure rising to 110 by July 2nd. Following the dispute, the number gradually decreased to 46, but rose again to 54 in the last week of the quarter. Since the close of the quarter, the number has again risen, and the latest report shows about 80 on the books. The secretary comments in the report on the wage reductions that have already taken place under the agreement, and says "as yet there are no indications of that reduction in the cost of printing to the customer necessary to attract orders and provide more employment." It is announced that during the dispute less than a dozen members remained at work in defiance of the official intimation.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

The Printers' Pension Corporation.

Brilliant Annual Festival.

Duke of York Presides.

Impressive demonstration was made once more of the enthusiasm with which the whole of the printing industry supports its greatest charitable institution, the Printers' Pension Almshouse and Orphan Asylum Corporation when, on Wednesday of last week, a large and brilliant assembly gathered at the Connaught Rooms to celebrate the Corporation's ninety-fifth anniversary. Happy evidence was again forthcoming of the personal interest shown towards the printing trade by the Royal House, the chair being taken by H.R.H. the Duke of York.

The loyal toast having been honoured, that of "The Queen, Queen Alexandra, the Prince of Wales and other Members of the Royal Family," was proposed by His Grace the Duke of Marlborough, K.G., who emphasised the public work done by the Duke of York amongst the working classes and in the direction of promoting better relations between class and class, employer and workman.

The Duke of York, after referring in detail to the multitudinous activities of the Printers' Pension Corporation and making a forceful appeal for its support, said: The art of printing is to a large extent the lynch-pin of civilisation, and printers by the exertions of their exacting art have conferred incalculable benefits upon mankind; by the dissemination of religious, scientific and artistic knowledge, and so affording us the means of intellectual pleasure and the source of moral courage. I therefore desire to ask the public whether the servants of the great printing trades, who in fact are their servants—their ready, faithful and hardworking servants, who were described so happily by my father at this very festival only thirteen years ago as "the invisible friends of all"—whether they have not established, and do not every day establish a strong claim, as Dean Stanley puts it, of "all who have written" upon the liberal remembrance of "all who have read."

Mr. James Thompson (chairman of council) responded. He made mention of their pride in having His Royal Highness presiding that night. It was quite impossible to say how great a factor the patronage and helpful consideration of the Royal Family had been in the past in building up that Corporation. They hoped it would continue to shine forth and so bring with gladness of heart that great joy which they were all feeling at the presence of his Royal Highness. His Royal Highness's presence was not only an encouragement to them to-day, but for all time, and they hoped that occasion would create a strong desire for many new subscribers. Unfortunately there were some people, he was sorry to say, who were connected with the printing trade and did not think it necessary or desirable to support the Corporation. If there were any there that night, he hoped they would feel constrained not to leave without availing themselves of that great opportunity.

The secretary (Mr. Joseph Mortimer) read the list of subscriptions and announced that the contributions amounted to £21,127, which had only been exceeded on two occasions during the century-long history of the Corporation.

Viscount Birkenhead, proposing "The Printing and Newspaper Industry," made some humorous remarks at the expense of the Press, then proceeded to say that no one there placed a higher value than he did upon the public spirit, the camaraderie and the generosity of the great printing profession. Although he had joked about it, it was one of the very greatest professions in the whole world, and one which, upon the whole—considering their powers, considering their opportunities for mischief (laughter)—was discharged with a high degree of public responsibility. In coupling with the toast the name of Viscount Burnham, he said Lord Burnham had been the director, as long as any of them could remember, of one of the greatest newspapers in the world. (Hear, hear.) He had directed it with one single object, the welfare of this country and the greatness of this Empire. Whether Lord Burnham agreed with him at a particular moment, or disagreed, there was no man in the whole British Empire with whom he would rather go tiger hunting than Lord Burnham. His word was his bond. He was,

in his (the speaker's) judgment, incomparably the greatest figure in the newspaper world to-day.

Viscount Burnham replied.

Among those accepting invitations to be present were:—

Alderman Lord Marshall, Lord Askwith, Alderman Sir William Waterlow, Alderman Sir Vansittart Bowater, Bt., Mr. John Walter, Sir William Berry, Bt., Mr. W. A. Clowes (Treasurer and Trustee), Sir Frederick Becker, Sir Frederick Bowater, Mr. J. Gomer Berry, Sir Frank Newnes, Bt., Sir Cecil R. Harrison, Mr. J. Lever Tillotson, Mr. E. H. Raynham, Mr. S. H. Caslon, Mr. A. H. Caslon, Mr. Cecily Clay, Mr. H. B. Cahusac, Mr. C. H. Crabtree, Sir George A. Sutton, Bt., Sir Andrew Caird, Sir Campbell Stuart, Mr. Alfred F. Blades, Mr. R. A. Bartlett, Mr. C. A. Bates, Sir Herbert Morgan, Mr. Dykes Spicer, Sir Howard Spicer, Mr. W. R. Codling (Controller of the Stationery Office), Sir Emsley Carr, Mr. John Swain, Mr. W. Spalding, Mr. H. A. Caslon, Mr. R. S. McAra, J.P., Mr. Frank Heywood, Mr. A. Hewitt, Mr. J. R. Riddell, and Mr. Joseph Mortimer, O.B.E. (secretary).

A Pensions Portrait.

In a letter addressed to us this week Sir William A. Waterlow writes:—

"Through the generosity of a few of Mr. Mortimer's many friends, I have been able, up to the present, to hand over to the Corporation a sum of £47 3s., realised by the sale of photogravure reproductions of an excellent snapshot of Mr. Mortimer, taken when being presented to His Royal Highness The Duke of York. Time alone prevented me at the festival dinner from showing the prints as widely as I had hoped, and as I have still a few copies left, I shall be grateful if you will insert this letter, so that friends of Mr. Mortimer desiring a copy may communicate with me. Any contribution that they may generously send me will be handed to the Printers' Pension Corporation."

Printing Representatives on F.B.I.

Printing and allied trade representatives forming Main Group 8 of the Grand Council of the Federation of British Industries are as follows:—Sub-Group 1 (Letterpress and Lithographic Printers)—Col. H. R. Fletcher, Col. J. R. Truscott, and Sir William A. Waterlow, K.B.E.; Sub-Group 2 (Electrotype, Stereotype Manufacturers, and Process Work)—Mr. J. C. Coppock and General W. Wright Bemrose; Sub-Group 4 (Publishers' Binders)—Mr. E. W. Humphries and Mr. Robt. Wilson.

In the miscellaneous group, Mr. E. Goodman represents the publishers.

Mr. A. F. Blades is the representative of Main Group 8 on the Executive Committee of the Federation.

A FIRST folio Shakespeare was bought by Mr. F. Sabin for £5,900 at Sotheby's last week.

Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

Annual Dinner at the Trocadero
Restaurant.

The annual dinner and ladies' night of the Association was held on Saturday at the Trocadero Restaurant, Piccadilly, Mr. Alfred Chadwell (president) occupying the chair. There was a large gathering, and the function was carried through successfully from start to finish, the arrangements made by the stewards being most efficiently carried out. Among those present were: Messrs. W. Bartholomew, A. F. Bell (Fry's Metal Foundry), J. Black, W. Carlin, J. R. Cocks, A. Cox (general secretary, Printing, Bookbinding and Kindred Trades Overseers Association), A. Fuller, A. E. Holmes (secretary, Printing and Kindred Trades Federation), D. Keats, W. J. Light, (Wm. J. Light and Co., Ltd.), T. H. Middleton, Jas. Miller, G. K. Naylor, J. R. Riddell (principal, School of Printing), G. W. Sharvell, S. W. Sinier, J. Shaw, F. R. Sparks, Glen Steel (Messrs. Jubbs), J. B. Tichener, W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), E. W. Whittle (general secretary, Printers' Managers and Overseers' Association), H. Williams (Williams Engineering Co., Ltd.), C. S. Yeates (C. S. Yeates and Co., Ltd.), and Mr. W. Bullett (general secretary, Electrotypers and Stereotypers Managers and Overseers' Association).

The loyal toasts having been honoured, with cordial references to the great interest shown by the Royal Family in printing charities, Mr. W. C. Warren proposed

"The Association."

In proposing this toast Mr. Warren said this honour had been bestowed upon him for several years, but it was the first time he had had the pleasure of doing so in the presence of several of the principal officials of their Society in London. He was sure they would agree with him when he said that they appreciated very sincerely the good fellowship which existed between the Association and those it was his privilege to represent. (Hear, hear.) He felt that the one thing above all others they could congratulate themselves upon was the continuance of that spirit of comradeship. Conditions in the trade, both from the point of view of the employers and the employed, during the past twelve months had been extremely difficult, but it was a matter for congratulation that they had managed to surmount those difficulties, and that night they found themselves in the same friendly feeling that had existed twelve months ago. (Hear, hear.) A matter he wanted to refer to particularly was the satisfaction he felt at the way the Association had joined with the other bodies in the trade in giving financial support to the new School in Stamford-street. That School, he thought, was going to be of great value in the future, and would react, he was sure, to the advantage of everybody concerned as the years went by. He would also like to take the opportunity of thanking the very many members of their Association who had supported him in such generous fashion by their contributions to his festival list to the Printers' Pension Corporation, which had enabled him to collect a sum of £714. Concluding, Mr. Warren coupled with the toast the name of one of his dearest friends, Mr. Jas. Miller, and, on behalf of those he (Mr. Warren) represented, most heartily offered the toast of the Association.

Mr. Jas. Miller, in responding, also referred to the good feeling that pervaded their section of the industry, and spoke with pleasure of the presence there of Mr. C. S. Yeates—(hear, hear)—which, he thought, was an unsolicited testimonial to the good feeling there was in the Association and their branch of the trade. (Hear, hear.)

"The Ladies."

Mr. A. F. Bell, in proposing the toast of "The Ladies" said that to do this task adequately required the oratory of a Balfour, the wit of Mark Twain, the poetry of a Burns and a general knowledge of ladies that he did not possess. (Laughter.) In fact the man was not yet born who could do full justice to it.

Mr. A. E. Holmes, who replied on behalf of the ladies, said he supposed why he was asked to propose this toast was because he was the most lady-like looking man in the building. (Laughter.) Speaking as a lady, therefore, he

wished to say they had had a very happy time, and hoped again to be invited to their dinner next year. (Hear, hear.)

"The President."

Mr. G. K. Naylor proposed what he thought the most important toast of the evening, that of "The President." He was sure there had been no forward movement indicated by Mr. Warren or in other directions in which their chairman had not been in the very forefront. Men to-day holding a similar position to their chairman needed a knowledge of the technical and scientific development of the craft; they also had to be imbued with a higher sense of responsibility in the questions of management, and he thought that the acquisition of these things in conjunction with an active social side had been the means of placing their craft in a far more prominent position than formerly. He asked them to drink with *eclat* the continued health and prosperity of their chairman.

The toast was given musical honours and heartily accorded.

Mr. Chadwell, in returning thanks, referred to the many ways in which the Association was trying to help not only its own members, but the whole of the trade. Their activities were not alone centered on technical education but they kept the charitable side of their operations well to the front. Their Association this year had voted fifty guineas to their Auxiliary (of which he was president), and they had given £100 to one of their members who had had the misfortune to lose both his hands, and they also at their last meeting collected nearly £40 to Mr. Warren's Festival List. It was a great pleasure to their members to welcome so many managers to their annual dinner and to see so many journeymen present. There was no class distinction on such nights as these. Credit for what he had been able to do for the Association must be shared by the committee as well. (Cheers.)

"The Visitors."

This toast was proposed by Mr. J. Black in a characteristically humorous speech. The last time he had the pleasure of proposing this toast a serious calamity occurred at his native town, Kirkintilloch, as a result of a plebiscite on the licensing question. (Laughter.) He was very glad the General Election was over, for there was no saying what might have happened—"for example, look at Dundee." (Laughter.)

Mr. John Shaw, in responding, spoke as a member of the machine department of the profession, and thought no two sections of the trade worked with such camaraderie as the stereotypers and the machinemen.

Mr. E. W. Whittie, who also responded, expressed his thanks for the kind invitation extended to him and the visitors to partake of their hospitality. The splendid time they had together on these occasions made them wish that the years would roll round more quickly. Regarding questions affecting the employers and the men the overseer was very often baffled, and frequently found himself between the devil and the deep sea, and he thought such gatherings as the present were conducive to bringing all sections of the trade more closely together.

Mr. Light's Concert.

Mr. Chadwell then announced that a concert of the Stereotypers' Auxiliary was to be held on December 4th at which Mr. W. J. Light had kindly volunteered to take the chair.

Mr. Light, in a few words, said that the 4th of December happened to be his birthday, and he hoped to be well supported in his endeavours on behalf of the Printers' Pension Corporation.

The Chairman then offered a vote of thanks to the stewards, which was briefly replied to by Mr. A. Wood.

During the evening an admirable programme of musical items was gone through under the direction of Mr. J. Mason, and was contributed to by the following:—Miss Gertrude M. Jones, Miss Minnie Parrock, Miss Jessie Wood, Miss Dolores Maurice, Miss Dorothy Burdett, Mr. Jackson West, Mr. Alfred Parrock, Mr. Will Waymont, Mr. Harold Stanley, Mr. Walter Lanham, Mr. Thomas C. Stokes (accompanist).

The stewards were Messrs. W. Crosby, W. M. Forsyth, J. Mason, and A. E. Wood, to whose services the success of the evening was largely due.

The singing of Auld Lang Syne followed by the National Anthem, brought a most enjoyable evening's entertainment to a close.

PERSISTENT advertising is the Golden Key which unlocks the door of successful business.

THE NATIONAL
Association of Wholesale Stationers
 AND
PAPER MERCHANTS.

National Meetings.

The thirty-third meeting of the National Council took place at the Council Chamber of the Association on Thursday, November 9th, Mr. F. M. Carson (the president) being in the chair. Meetings of the National Writings and Printings Section (Mr. A. Dykes Spicer, chairman, presiding) and of the National Wrapping Paper Section (Mr. J. Harmer Dalton, the chairman, presiding) were also held on the same day.

It will be remembered that at the last National meetings, the unfavourable shipping rates charged for the shipment of paper from Hamburg to various towns in the Midlands and North of England via Hull and Goole, had been under consideration, and it was then agreed that the matter should be taken up by the Association. The companies concerned had been approached accordingly, with the result that satisfactory reductions had been made in each case.

The vexed question of sample post has recently received the full consideration of this Association, and a letter has been sent to the Postmaster General drawing his attention in detail to the anomalies of the present position which is so inequitable and adverse to the interests of the home trade, since the Post Office is now conveying to consumers in

YOUNG MAN, with fair knowledge Book-keeping and General Office Routine, desires engagement; small salary accepted to commence.—Box 14010.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

CAXTON MACHINERY CO., 74, YORK STREET, GLASGOW; surplus plant; warranted good condition.—

Quad Royal, two-colour, Dawson and Sons, WHARFEDALE; flyers and geared inkers.

Double Demy, Payne and Sons, WHARFEDALE; large diameter flyer drum, band brake to cylinder, geared inking, full equipment, £300.

38-in. Self-Clamp "FURNIVAL" GUILLOTINE; two new knives, £130.

21½ by 16-in. "VICTORIA" PLATEN; four-inking roller, Model V., complete, perfect order, £200.

Several small Guillotines, Paging, Perforating and Platen Printing Machines, and Second-hand Wire Stitching Machines from 3/16th to 1½-in. 14013

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ¼-in.—Box 13998.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD., 1-3, Baldwin's-place, Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Miscellaneous.

LIGHT FORD COVERED VAN, suitable for Printers or Stationers; in good order; no reasonable offer refused.—W. G., 91, Catlin-street, S.E.16. 14016

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe Lane, London, E.C.4

this country sample packets from foreign countries at a very much lower rate than the samples of British manufacturers, which can only be distributed through the post by the very high inland letter and parcel rates now in force. Pressure is therefore being brought to bear on the Postmaster-General for the re-institution of the inland sample rate on a basis which will place the British manufacturer at least on an equal footing with the foreigner. These representations are also receiving the full support of the allied industries.

A full report was given to the National Wrapping Paper Section and National Council of the progress made in the negotiations with the various sections of mills, and of the joint meeting which had recently been held with the makers in Manchester.

The conditions of sale of the Scandinavian Convention were again under consideration and the matter will come up for full consideration at an early date.

The subject of trade terms was again under discussion by the National Council.

It was understood that the Federation of Master Printers were appointing their committee to meet the members of this Association in a conference which it had been suggested should take place on matters of common interest.

MESSRS. JAS. WRIGLEY AND SONS, LTD., Bury, have appointed Mr. Thos. Lang, late manager for Messrs. Spicer Bros. at Birmingham, to act as their representative in the Midlands. Mr. Robert Chester has also been appointed as an additional representative in Manchester and district.

Africa, Canada, etc.

THURSDAY, NOVEMBER 23, 1922.

After the Election.

Now that "the hurly-burly done, and the
battle fought and won"—the bill-sticking,
circularising and speechifying at an end, and
the new Parliament fully elected—printers,
like the rest of the community, heave a sigh
of relief. Opinions as to whether or not the
new Parliament will prove a satisfactory one
vary, of course, with individual political
convictions. There is, however, a pretty
general feeling of relief throughout the com-
mercial world that the country has not made
a worse choice than it has. To this relief is
added, for innumerable printers, a release
from the rush of election printing—although,
indeed, that burden has its compensations,
and the trade must have benefited consider-
ably by the ephemeral printing boom, a boom
which was made exceptionally noticeable on
account of the wholesale scrapping of stock
election literature in the extraordinary cir-
cumstances under which this election was
ushered in. A perusal of the Parliamentary
returns shows that the printing trade will
have many direct representatives in the new
House, and we now wait with interest to see
the work of Parliament started in earnest, and
an attack made upon some of the many pro-
blems which will shortly come up for con-
sideration. It is to be hoped that the House
of Commons will waste no time in making a
move towards greater economy and efficiency
of administration, and will inaugurate such
changes in home and foreign policy as shall
hasten a much-needed revival of trade.

Printing Industrial Co-operative Societies.

UNDER the heading of Industrial Co-opera-
tive Societies, the Ministry of Labour *Gazette*
reports that in the printing industry in 1920,
in Great Britain and Ireland, Associations of
Consumers represented a total number of
employees of 2,890, the wages paid during the
year being £393,408, and the value of produc-
tion £1,191,197. In 1921 similar associations
(Ireland being excluded) gave the number of
employees as 2,738, with wages paid during
the year £413,225, and the value of produc-

tion £1,010,325. Associations of workers in
the printing industry of Great Britain and
Ireland during 1920 had employees numbering
1,025, the wages paid during the year being
£175,049, and the value of productions
£456,273. In 1921 (again exclusive of societies
registered in Ireland), the number of em-
ployees in associations of workers was given
as 1,006, with wages paid during the year
£191,824, and the value of productions
£454,504.

**Paper Imports.—Large Arrivals of
Packings and Wrappings.**

PAPER and cardboard imports into the
United Kingdom continue to show signs of
expansion. It is true that the October figures
are slightly lower than those for September
(by some 117,000 cwts.); but the growing
tendency is in evidence generally throughout
the year. The total imports for October,
amounting to 1,030,103 cwts., reveal increases
compared with the corresponding month of
last year of 232,087 cwts., or 29 per cent., and
over the same month of 1920 an advance of
190,851 cwts., or 22·7 per cent. "Printing and
writing paper in large sheets" received repre-
sent 32·7 per cent. of the total imports, the
actual quantity being 337,668 cwts., which
included very much larger consignments from
Norway, viz., 64,633 cwts., against the smaller
figure of 5,264 cwts. in October last year. In-
creased supplies also came from Sweden,
Canada, the United States and "other coun-
tries," while decreases are indicated in the
arrivals from Germany, Belgium and New-
foundland. With regard to the imports of
"packings and wrappings, including tissue
paper," which amount to 277,759 cwts., there
is not only shown an excess over the quantity
received twelve months ago, but an advance of
42,152 cwts. over October, 1920. The big in-
crease is mainly accounted for by the aug-
mented supplies received from Sweden and
Norway, while Finland's contribution has
increased to a considerable extent. The re-
ceipts from Sweden, amounting to 109,451
cwts.—easily the first on the list—represent
an increase of 35,603 cwts. compared with
October last year; while those from Norway
(68,344 cwts.) and Finland (36,829 cwts.) show
advances respectively of 50,229 cwts. and
19,111 cwts. Other classes of merchandise
that have found an improving demand in
the United Kingdom have been "millboards,
leatherboard, cardboard and pasteboard,"
which were received to the extent of 90,162
cwts., against 44,250 cwts. last year, and
"strawboards," 274,938 cwts., contrasted
with 236,804 cwts. The total c.i.f. value
of the imports for the month stands at
£1,116,780, an increase of £139,362 (14·2 per
cent.) compared with twelve months ago and
a decline of £1,263,525 (53 per cent.) against
October, 1920. For the ten months' trading
the total imports amounted to 8,924,561 cwts.,
an advance of 3,590,467 cwts. (67·3 per cent.)
contrasted with the corresponding ten months
last year and a decrease of 2,524,203 cwts. (22
per cent.) on January-October two years ago.
The total value of the imports for the ten
months (£10,079,343) marks an increase of
£398,731 (4·1 per cent.) over the correspond-
ing period last year, but a decrease of
£16,316,040 (61·8 per cent.) compared with
the ten months of 1920.

EAST LANCS PAPER MILLS.—The directors
of the East Lancs Paper Mill Co., Ltd., are
looking well after the recreation of their
employees. The latest effort in this direction
is the provision of a new institute. The
building, when completed, with its reception
room, billiard room, reading room, ladies'
room, baths, etc., will bear testimony to the
directors' appreciation of the club's welfare,
in providing the means whereby the employees
can meet together for social and educational
intercourse. The completion of the summer
activities of the Recreation Club was marked
recently by a social party and presentation
of tennis and bowling prizes by Mr. John
Seddon, to whom a cordial vote of thanks
was passed on the motion of Mr. J. Pearson.

Printers in Parliament.

Results at the General Election.

A number of members of the printing and allied trades were returned to Parliament at the General Election last week, while others failed to secure the majority of votes.

The Rt. Hon. C. W. Bowerman (Lab.) will be welcomed on again being returned for Deptford.

Sir G. Rowland Blades (U.), Epsom, is joint senior partner in the firm of Blades, East and Blades, printers.

Sir John Leigh (U.), elected for Clapham, is proprietor of the *Pall Mall Gazette*.

Sir C. Kinloch-Cooke (U.), Devonport, was the founder of the *Empire Review*, and formerly editor of the *Observer* and the *Pall Mall Gazette*.

Sir T. J. Bennett (U.), Sevenoaks, spent several years in India as a journalist, and is the principal proprietor of the *Times of India*.
Sir A. Holbrook (U.), Basingstoke, is a newspaper proprietor.

Lieut.-Colonel H. K. Stephenson (N.L.), Park Division of Sheffield, is head of Stephenson, Blake and Co., typefounders.

Mr. Geo. Lansbury (Lab.), lately editor of the *Daily Herald*, is again member for Bow and Bromley Division of Poplar.

The new member for East Islington, Capt. A. W. M. Hudson (U.), is a director of a firm of publishers of trade and technical journals.

A bookbinder is among the new Labour members in the person of Mr. B. Riley, Dewsbury Division. He was one of the founders of the National Labour Press at Manchester in 1910, and is still a director.

Mr. E. E. Alexander (U., East Leyton), started in business as a printer in 1894 with his father at Leyton and was connected with the establishment of the first printing trade classes held at the Polytechnic, Regent-street.

Mr. N. Grattan Doyle (U.), member for North Newcastle, is a director of the Northern Newspapers Co., Ltd.

Mr. G. H. Roberts (N.L.), who never forgot his compositor origin while he held high office in the late Government, is again one of the members for Norwich.

Mr. Harry Becker (Ind. U.), Richmond, is son of the pulp and paper magnate, Sir Frederick Becker, and is himself engaged in the paper trade.

Mr. F. O. Roberts (Lab.), West Bromwich, is secretary of the Midland District of the T.A.

Colonel Sir Godfrey Collins (L.), Greenock, is managing director of W. Collins, Sons, and Co., publishers.

The National Liberal member for Montrose, Mr. J. Leng-Sturrock, is a grandson of the late Sir John Leng, the Dundee newspaper proprietor, and is himself interested in the firm of John Leng and Co., Ltd.

Mr. Levi Collison (L.), Penrith and Cockermouth, established a large art printing business in Preston 23 years ago, which rapidly grew, and he now employs over a thousand persons in several factories at Blackburn, Preston and Hull.

Mr. G. R. Hall Caine (Ind. U.), East Dorset, is deputy chairman of Charles Marsden and Sons, papermakers, and was Deputy Controller of Paper during the war.

Mr. R. McNeill (U.), Canterbury, was editor of the *St. James's Gazette*, 1900-4.

Mr. Percy Hurd (U.), Frome, editor of the *Outlook* from 1898 to 1903, and afterwards London editor of the *Montreal Daily Star*.

Mr. A. J. Bonwick (L.), Chippenham, Wilts, is a liveryman of the Stationers' Company, and a director of a number of newspaper and printing businesses.

Mr. Thomas Johnston (Lab.), Stirling and Clackmannan, is editor of the Labour weekly, the *Forward*, published in Glasgow.

Mr. T. E. Naylor (Southwark) and Mr. G. A. Isaacs (Gravesend), were both defeated.

THE O.P. Club complimentary dinner to Mrs. Kendal on Sunday evening was attended by Sir Adolph and Lady Tuck, Mr. Percy Barringer, and Mr. Carl Hentschel.

THE Rt. Hon. C. W. Bowerman, M.P., and Mr. Arthur O'Connor are taking the chair at a free smoking concert, to be held at the "Crown and Castle," Dalston, on Monday, November 27th, at 7.15 p.m., and solicit support for this effort, which is part of the excellent pensions work of the North-east London Auxiliary.

Personal.

At the Court of Aldermen on Tuesday, where the new Lord Mayor presided for the first time, a vote of thanks was accorded to Sir John Baddeley, the late Lord Mayor, for the way in which he had discharged his duties in an eventful mayoralty.

ALDERMAN R. W. SIMPSON, J.P., the managing director of R. W. Simpson and Co., Ltd., of Richmond, Surrey, and Barnes, S.W., has been elected an honorary freeman of the Borough of Richmond. Including the last recipient of the honour there are only three names on the roll, the other two being the Lord Chancellor (Viscount Cave) and Sir James Szlumper, D.L. Alderman Simpson has been Mayor of Richmond three times.

MR. W. HOWARD HAZELL has agreed to succeed Lieut.-Col. J. R. Truscott as president of the London Master Printers' Association, and to take over the presidency in February next. It will thus fall to Mr. Hazell, and Mrs. Hazell, to act as hosts when the L.M.P.A. entertains the Federation of Master Printers on the occasion of the annual meetings in May.

HIS HIGHNESS THE JAM SAHIB OF NAWANAGAR ("Ranji") was the guest of the evening at a Press Club dinner on Saturday night.

MR. CHARLES T. JACOBI was the subject of a short illustrated biographical article in a recent issue of the *American Printer*.

MR. HARDAKER, circulation manager of the *Westminster Gazette*, was the guest at the first annual dinner of the department, when a presentation was made to him as a token of esteem from the staff.

MR. J. CARTLAND, M.C., M.Sc., Manchester manager of Fry's Metal Foundry, and Mr. E. Fisher, their representative for the sale of "Fryotype" printing metals in the northern counties, travelled by aeroplane from Manchester to London in order to attend the annual dinner of the Printers' Pension Corporation last week. The journey took less than two hours, although the aeroplane had to pass through several banks of fog.

MR. H. J. GORDON, who has been for nine years on the staff of the *Free Press and Evening Gazette*, has received an important appointment with Messrs. Hulton and Co., and is leaving shortly to take up work in their Manchester office.

MR. STEPHEN WALTER has resigned the editorship of the *Investors' Review*.

M. GEORGES JUBIN, editorial chief secretary of the *Petit Journal*, Paris, has been promoted to the rank of Chevalier of the Legion of Honour.

Printing & Allied Trades' Boxing TOURNAMENT.

The annual boxing tournament held under the auspices of the Printing and Allied Trades' Charity Sports Association took place on Friday evening at the Northampton Institute, Clerkenwell. Major Arnold Wilson, the popular promoter of many big boxing events, generously defrayed the expenses in connection with the occasion, every penny taken at the doors going directly to assist the good work being carried on by the Association. The large hall was filled to overflowing, and the programme proved in every way a great success.

The Association is indeed to be congratulated on the fact that it was able to secure the appearance of the professional champions, Joe Beckett and Jimmy Wilde. These, along with Jack Bloomfield, the "cruiser" weight champion, were due to box exhibition bouts, but Bloomfield did not put in an appearance, and Beckett, although introduced from the ring, could not box because he had just undergone a slight operation to his ear. But Wilde sparring—his opponent being Fred Grace, the old amateur light-weight champion and Olympic Games winner—and his exhibition was much appreciated.

Employees and Costing.

SIR,—It will interest your bookbinding correspondent as well as his readers to learn that the Federation Costing Committee welcome any opportunity of speaking with employees on the question of costing. Numerous addresses have already been given to workers under the auspices of the J.I.C. in different parts of the country and the Federation Costing secretary will be pleased to arrange for a speaker to address any branch of either J.I.C. or trades union on the subject.

With reference to the suggestion that a pamphlet should be prepared, consideration was given to the question at the last meeting of the Costing Committee.

Yours, etc.,

A. WILLIAMSON.

24, Holborn, E.C.1.

Nov. 21st, 1922.

Life of a Pen.

SIR,—Not even the professional writer is more indebted to the invention of the fountain pen than the commercial traveller.

After years of tribulation with the cross-nibbed pens and muddy ink of the country hotels I became the possessor of a fountain pen. That was in 1896, and for 26 years I have made up my accounts, written my reports and conducted my correspondence with the same pen.

To "gentlemen of the road" the fountain pen is as blessed a boon as the motor car.

Yours, etc.,

E. G. SPROCKETS.

Adelphi Hotel, John street,
Strand, W.C.2, Nov. 21st, 1922.

Prince and Boy Printers.

The Prince of Wales on Friday visited the new Barnardo Home recently established at Goldings, in Hertfordshire. Printing and bookbinding are amongst the crafts taught at this well-conducted institution, now known as the William Baker Technical School. Amongst several interesting gifts presented to the Prince was a leather-bound book, embossed in purple and gold, entirely the work of the boys in the printing shop there, and containing a special address to the Prince, as well as photographs of the buildings and grounds.

Election Paper and Print.

Some interesting facts and figures relating to the quantity of paper and print consumed during the course of the General Election have been compiled by the *Daily Telegraph*.

The trades which are most benefited by an election are the printing and paper industries. A considerable strain has been put upon the papermaking industry by the demands of election agents. When it is remembered that 130 tons of election leaflets, etc., have been despatched from the central organisations of the various parties in London it will be realised what this means to the paper and printing trades. In addition to this, there is the paper and printing required in the constituencies for purely local purposes. Election addresses alone are computed to total 54,000,000 copies. This has involved much additional employment in the paper business, while it has helped materially to relieve a good deal of unemployment among jobbing printers.

Here are some instructive approximate figures of the parties' output of literature:—

	Tons.	Posters.	Leaflets.
Conservatives ...	50	300,000	10,000,000
Labour ...	40	250,000	18,000,000
Ind. Liberals ...	30	200,000	15,000,000
Nat. Liberals ..	10	65,000	4,000,000

The proportion to candidates is fairly even between the parties. In addition it is estimated that 54,000,000 election addresses have been circulated among the 18,000,000 electors of England and Wales—for these figures take no account of the constituencies in either Scotland or Ireland.

DIVIDENDS AND REPORTS.

"IRISH TIMES."—Profit £30,354, of which £1,000 to general reserve. Preference dividends are met, but directors do not consider it prudent to recommend dividend on ordinary owing to unsettled conditions; £9,668 forward.

A. B. FLEMING AND CO.—Interim dividend of 5 per cent. actual, declared by directors of this Edinburgh company of printing ink and chemical manufacturers; same as a year ago.

EWART AND COLLIS, LTD.—The report for the year ended December 31st states that the net loss for the year was £19,306, which added to the debit balance brought forward of £62,584, makes a total debit of £81,890. At the general meeting, shareholders will be asked to express their views regarding a scheme of reconstruction which the directors have had under their consideration.

A. M. PEBBLES AND SON, LTD.—The annual report to June 30th, 1922, shows that the debit balance on last year's accounts of £46,109 10s. 4d. has been reduced to the net sum of £8,870 15s. 9d. Directors regret to report that the general depression in the paper trade referred to in their last report has continued throughout the year, and that, together with heavy law costs in prosecuting the company's claims in respect of unfulfilled contracts for delivery of raw material, is responsible for the adverse result shown by the accounts. The purchase of the freehold warehouse premises at 28, St. John's-lane and 79-87, St. John-street, E.C., referred to in the director's report dated October 5th, 1920, will, in their opinion, with the return of improved trade conditions, be found to be fully justified. All stocks, of whatever nature, have been taken to account at the market price ruling on June 30th, 1922, or at cost—whichever was the lower. The directors announce with regret the resignation, as a director, of Mr. Herbert Ingram.

NEW COMPANIES.

OCEAN LIFE PRINTING AND PUBLISHING CO., LTD.—Capital £22,000; proprietors, printers and publishers of newspapers, journals, magazines, books and other literary works, printers, advertising agents, etc. Private company. First directors: R. Poulter, W. Salmon and H. S. Mogford. Registered office: 1, Mitre-court, Temple, E.C.

SPHINX PRINTING AND BOOKBINDING CO., LTD.—Capital £1,000; stationers, printers, lithographers, stereotypers, electrotypers, photographic printers and lithographers, bookbinders, etc. Private company. First directors: F. R. Norman, A. G. True and Lilian E. Ayto. Registered office: 286, Bishopsgate, E.C.

THACKERY AND BEST, LTD.—Capital £3,000; to acquire the die-stamping business known as "William Thackery and Co." and to carry on the business of printers, die-stampers, relief stampers, lithographers, stereotypers, etc. Private company. Permanent joint managing directors: S. H. Best and W. H. Thackery. Registered office: Station-road, Otley.

PORTSEA PRINTING WORKS, LTD.—Capital £1,000; printers, publishers, bookbinders, newspaper proprietors, etc. Private company. First directors: E. Emanuel and Jane V. Emanuel. Registered office: 111, Great Portland-street, W.1.

H. WALTERS AND SON, LTD.—Capital £5,000; to acquire the business of printers and stationers carried on at Liverpool, as "H. Walters and Son"; and to adopt an agreement with R. Walters, Mrs. Mary E. Walters and Mrs. A. Walters. Private company. First directors: R. Walters, F. Walters, Mrs. M. E. Walters and Mrs. A. Walters. Registered office: 65-69, South John street, Liverpool.

POSTAGE METERS AND MACHINES CO.—Capital 7,500 shares without any nominal or par value; manufacturers of and dealers in machines for cancelling postage stamps and otherwise postmarking mail matter, cancelling or endorsing cheques, etc. Directors: W. H. Bowes, C. F. Kuch, A. H. Pitney and R. E. Heyn, all of Connecticut; and W. H. Manny, E. Rickard and E. M. Flesh, all of New York. British address: Imperial-buildings, 56, Kingsway, W.C.2.

CLEEVE ADVERTISING AGENCY, LTD.—Capital £2,000; advertising and publicity agents, contractors, experts and consultants, etc. Private company. Directors: C. E. Alcock and C. R. Alcock.

W. J. MAY AND CO., LTD.—Capital £3,000; reservoir pen manufacturers, booksellers, publishers, paper manufacturers, cabinet makers, etc. Private company. First directors: O. B. Wade, H. E. H. Cooke, W. J. Webber, S. Himmelblan and W. O. Hughes. Registered office: 34, Paternoster-row, E.C.

TECHNICAL ASSOCIATIONS, LTD.—Capital £100; to organise business methods or render services connected with the control of any business undertaking, etc.; to carry on agency business in relation to office furniture and appliances, printing and publishing, advertising signs and novelties, etc. Private company. First directors: H. R. Fairbanks, and G. P. Stickney. Registered office: Lloyds Bank-chambers, Southampton-street, Strand, W.C.

SCOTTISH CARBON AND RIBBON CO., LTD.—Capital £1,500; dealers in all classes of stationery, carbons, typing machine ribbons and office requisites, etc. Private company. First directors: H. M. Buck, J. B. Morgan and A. Turnbull. Registered office: 136, Renfield-street, Glasgow.

PRINTERS' ADVERTISING AGENCY, LTD.—Capital £800; artists, designers, copywriters, printers, printers' block-makers, advertising and publishing agents, etc. Private company. Permanent directors: A. Knight, H. Whetton and H. W. Lawrence. Registered office: 46, Bloomsbury-street, W.C.1.

LONDON HYDROLOID PRODUCTS, LTD.—Capital £1,570; waterproofers of paper, cardboard and any fabrics, substances, articles or goods capable of being treated by any waterproofing process and in particular by the Hydroloid Process and paper-makers, box-makers, cardboard manufacturers, stationers, printers, etc. Private company. Permanent directors: F. J. Sabel, E. Cooper, J. H. Platford and A. F. Hall. Registered office: 30, Walbrook, E.C.

CORE, LTD.—Capital £100; manufacturers of and dealers in gramophones, pianofortes, etc., music publishers, printers and sellers, etc. Private company. Subscribers: G. Reynolds and C. W. Church.

INTERNATIONAL CARTONS, LTD.—Capital £25,000; manufacturers of and dealers in

dustproof and other cartons and folding boxes or similar receptacles, and machinery for making same, etc., and to adopt an agreement with Henry Drysdale Huddart and Tagg, Ltd., and the "Cariborium" (Caribonum?) Co., Ltd. Private company. Provisional directors: J. M. Evans and W. A. Sanger.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory.)

FRED FORD AND CO., LTD. (printers, etc., Exeter).—Debenture dated November 1st, 1922, to secure £1,000, charged on the company's undertaking and property, including uncalled capital. Holder: G. Little, Linden, Old Church-road, Chingford, Essex.

SIR W. C. LENG AND CO. (SHEFFIELD TELEGRAPH), LTD.—Satisfaction in full on November 3rd, 1922, of mortgage dated August 28th, 1914, securing £25,000.

GOODWIN AND TABB, LTD. (music librarians and publishers, etc.).—Debenture dated November 3rd, 1922, to secure £1,300, charged on the company's undertaking and property, including uncalled capital. Holder: Mrs. D. F. Heizmann, 7, Scott's-avenue, Shortlands, Kent.

IMRAY LAURIE NORIE AND WILSON, LTD. (engravers, etc.).—Mortgage on freehold land at Chadwell Heath, Essex, dated October 20th, 1922, to secure all moneys due or to become due from company to N.P. and Union Bank of England.

JAMES BURN AND CO., LTD. (bookbinders, etc., London).—Trust deed dated October 30th, 1922, supplemental to trust deeds dated November 16th, 1905, April 26th, 1920, and July 4th, 1921, securing £80,000 and varying the provisions of the said deeds, charged on the company's assets, present and future. Trustees: London Trust Co., Ltd.

SOUTH WALES PRINTING AND PUBLISHING CO., LTD.—Mortgage on 10, Mill-lane, Cardiff, and certain premises in rear thereof dated October 19th, 1922, to secure all moneys due or to become due from company to Barclays Bank.

BANKRUPTCIES, etc.

Re ROBERT JOHN FULFORTH CAMMELL, cardboard box manufacturer, 53, New North-road, N.—This debtor attended on November 1st before Mr. Registrar Hope at the London Bankruptcy Court for public examination upon accounts showing liabilities £920 against assets valued at £2 15s. Replying to Mr. E. Parke, official receiver, the debtor stated that for about 20 years prior to May, 1918, he was employed in the cardboard box trade. With about £400 borrowed money (since repaid), and machinery and fixtures purchased by his wife for about £250, he then commenced business at the above address under the style of "Cammell." The trading was fairly successful until May, 1920, but subsequently resulted in a loss, and in March, 1922, owing to pressure by creditors, one of whom levied execution, he abandoned the business. His wife successfully claimed the machinery and fixtures, and had since continued the business at the same address, and had employed him as manager at a weekly salary. Witness attributed his insolvency to depression in trade and to ill health. The examination was concluded.

Re DAVIES LAZARUS AND CO., LTD., cardboard box manufacturers.—The creditors and shareholders of this company (in liquidation) met on November 2nd at the Board of Trade Offices, Carey-street, W.C., before Mr. J. Barwick Thompson, official receiver. A compulsory winding-up order was made on April

11th on the petition of a creditor. The chairman reported that the company was promoted by Mr. David Dombrowski on December 19th, 1921, as a private company, with a nominal capital of £10,000 in £1 shares, and was formed to take over as a going concern the business of a cardboard box manufacturer previously carried on by him under the style of Davies Lazarus and Co., at 261, Cambridge-road, E., also at Birkbeck-street and Parliament-street, S.W. Mr. David Dombrowski was appointed a director to hold a life office and as managing director at a salary of £400 per annum, and his three brothers were also appointed directors and managers of various departments at weekly salaries of £6 to £8 a week. The company had an extremely short existence as a receiver was appointed for the first debenture holders on March 17th, 1922, but the accounts showed a trading loss for the three months of £3,125. During February and March the company was pressed by a number of creditors and on March 15th a resolution was passed for voluntary liquidation. The first debenture holders thereupon appointed a receiver, who took possession of the assets, and continued to carry on the business for the purpose of completing orders then on hand and selling the business as a going concern. Mr. Ellesmore, the receiver, had entered into a provisional contract for the sale of the business and all assets, with the exception of the book debts, for £2,000, but the trustee in Mr. Dombrowski's bankruptcy had commenced an action to set aside the sale of the business to the company and the provisional contract had not been proceeded with. The failure of the company was attributed to the fact that the promised capital was not forthcoming, also to heavy overhead charges and bad management. The accounts filed under the liquidation showed unsecured liabilities £20,188, other liabilities £7, preferential claims £289, and loans on debenture bonds £2,029. The assets were valued at £4,674, but in the face of the recent offer of £2,000 (which, however, excluded the book debts) that appeared to be an optimistic valuation, and in any case, whether the assets were claimed by the bankruptcy trustee, or were available for the company, the unsecured creditors could not hope

to receive anything. The factory had been closed and the receiver had ceased to carry on business. The liquidation was left in the hands of the official receiver.

RE GEORGE CLARK, papermakers' agent, late of Byron House, Fleet-street, E.C.—This debtor attended on November 8th, before Mr. Registrar Hope, at the London Bankruptcy Court for public examination upon accounts showing total liabilities £1,799 (unsecured £1,166) and assets valued at £752. Replying to Mr. Waterer, official receiver, the debtor stated that for many years prior to December, 1918, he was employed in the paper and printing trade. He then commenced business in partnership with another person as papermakers' agents at the above address, under the style of "Winten and Clark." They each put in £150 as capital and the trading was continued until June, 1921, when the partnership was dissolved, his partner taking over the firm's assets and liabilities. Witness had since been without regular occupation. He attributed his insolvency to liability under a guarantee given by him on behalf of another person for which no consideration was received, to loss in connection with a theatrical venture in 1921, law costs, bad debts and lack of regular employment. The examination was concluded.

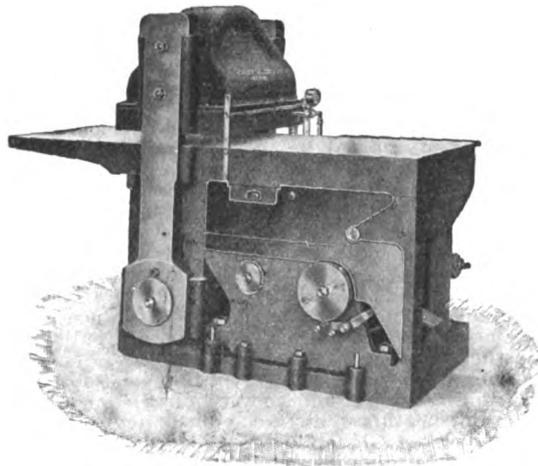

RE GEORGE NEWTON OSBORNE (trading as J. Bannister and Co.), printer and box maker, 96, Laburnum-street, Kingsland-road, E.—This debtor failed last June with total liabilities £32,495 (unsecured £31,679) and net assets valued at £19,660, after deducting £290 for payments of the preferential claims. He attended before Mr. Registrar Hope on November 8th at the London Bankruptcy Court for public examination, and in reply to Mr. Waterer, official receiver, stated that in 1895 he went to the U.S.A., and acted as manager of printing works at Cincinnati, at a salary of \$20,000 per annum, until 1912, when he returned to this country with about £2,000, upon which he lived for the following three years. In January, 1916, he purchased for £400 the goodwill of a printing business at 27, Old Jewry, E.C., which he thereafter carried on under the existing trading name of "John Bannister and Co." He "farmed" out his orders until 1917, when he purchased

plant at 204, High-street, Homerton, for £250, and thereafter executed orders received by him at that address. About March, 1920, in consequence of increasing business he gave up that factory and removed to larger premises at 96, Laburnum-street, Kingsland-road. Witness in March, 1919, also commenced business as a box maker at 127, Brunswick-street, Kingsland-road, the freehold of which premises had been purchased by his wife for about £1,600. In September, 1919, a fire occurred at 96, Laburnum-street, and stock to the value of about £19,000 was damaged or destroyed; he recovered £10,000 from various insurance companies and a further amount of £9,900 from Lloyd's, which latter sum he gave to his wife. His business prospered and reached its high-water mark about the middle of 1919. In the following November he had a stock of raw material for making boxes and of paper to the value of about £15,000, but thereafter, owing to a falling market, these goods continually depreciated in value, and he lost money on trading by having to execute orders at current prices. In July, 1920, a fire broke out at 127, Brunswick-street, and stock to the value of about £9,000 was damaged or destroyed; witness recovered only £2,250 from the insurance company and £2,563 under policy with Lloyd's. Then in June, 1921, a further fire occurred at 96, Laburnum-street, when stock to the value of between £9,000 and £10,000 was damaged or destroyed, and at the date of these proceedings his claim for loss had not been settled. The examination was concluded.

The *Briton*, a fortnightly newspaper, is to be issued in Paris for the benefit of children learning the English language.

COOPER & BUDD LTD
HIGH-CLASS TRADE PRINTERS
MCDERMOTT RD PECKHAM
Machines for Colour Work
Automatic Plates for High-class Job Printing
The Monotype for Fine Type-setting
We do not cater for cut-throat printing

Swiss Manufacture.

Can be seen running in London and Provinces.

WINKLER Automatic Moulding and Drying Press

For Newspaper and Fine Art Moulds, *Dry and/or Wet Flong*,
Hot or Cold. With Electric or Steam Heating.

Improves the moulding results.
Equals in capacity 3 Pneumatic Presses.
Eliminates the Mangle.
Restricts Moulding and Drying to one machine.
Saves type, time, labour, power and fuel.

Produces, in conjunction with Light's
"PHOTO-TONE" Fine Art Flong,
Half-tone Matrices of finest screens so
accurate that Stereos cast therefrom are
facsimile to originals.

Telegrams: "Winkolight, Fleet, London."

A Talk on Printing Valuation.

By Mr. FRANK COLEBROOK.

We reported last week the annual meeting of the Printers' Managers and Overseers' (Parent) Association, and referred to the address delivered on that occasion by Mr. Frank Colebrook, F.A.I., on the subject of values and valuation. The following is, with some modifications, the substance of his extempore talk.

Value, Mr. Colebrook said, was a fascinating subject. We revolved it continually, often without realising that we were doing so. A very early valuer was the fighting cannibal, who valued a war prisoner as so much food. As the years passed, a brainier valuer emerged—the man who first reflected that it would pay better to keep a prisoner alive as a slave, and eat the produce of his digging spade or his hunting arrow. A still better valuer was the man who first opined that if the slaves were allowed, under some strict conditions, to do some cultivation or hunting for themselves, as well as for their lords, they would work without so much oversight being necessary. Each of these early valuations eventuated in a material enrichment of the world and also in a great moral advance. Much worse valuers had their say and their way in England five hundred or so years ago. They said the land would be worth more if its small farms or arable holdings were broken up and turned to pasture, so that wool or hides could be exported, and gold be brought in plentifully. There were two mistakes here. Gold was not the same thing as wealth, and the people who received the gold were not the population of the kingdom, but were only some of that population. Before this bad valuation was made the distribution of wealth—that is of commodities adapted for consumption or enjoyment—was fairly general; indeed, Parliament, at any rate, passed a law that the silver ornament on an English peasant woman's dress should not be in excess of a certain value. Elizabeth had to pass a Poor Law, the first in our history, to deal with the needs of the sturdy beggars whom this breaking up of the farms had created. The interest of her Act was not merely historic, for Elizabeth, unlike Queen Anne, was not dead. We saw that to-day some local authorities were valuing printing machines, and committees were assessing them for rating, and Mr. Ryde, K.C., in his authoritative book on rating said in his very first words that Elizabeth's unrepealed Act was the foundation and warrant for this present day machinery rating practice.

Of course, there had been subsequent interpreting and amending Acts, and some judge-made law upon the matter, too; the subject having been taken in the ruling case—that of the Assessment Committee of the Hunslet (Leeds) Union—right up to the House of Lords. But it was really Elizabeth who was ruling the printer as owner of machinery values at this very day. The statesman-printer, Benjamin Franklin, was the first important challenger of the idea that gold was the true measure of value. Franklin said that the necessary labour of all kinds involved was the measure of value. Adam Smith, in 1776, sided with Franklin in his "Wealth of Nations." He, too, said that labour, considered comprehensively, was the source of all wealth. In the same year, 1776, Watt invented his steam engine, and thereupon in came the modern factory. Along, too, came Ricardo, the stock broker and writer on political economy, to render Adam Smith afresh in 1819 in terms of the transformed industry, and with some qualifications of his own. And along later came John Stuart Mill, differing from Smith and Ricardo in some of his insinuations. Mr. Colebrook spoke of the way these, and later writers, orthodox or heretical, differed from each other as touching laws of value. We ought, he said, individually to try to understand these things, and dare to do some thinking upon them, indeed upon any matters, for ourselves. It seemed to him the Marxian contention *re* values, and particularly *re* the Marxian "Surplus Values," had been a great factor eight years ago in determining whether or not the world should go to war. Marx's three million of followers had voted the war credits in Germany; not that they loved the Kaiser, but, if one correctly read their minds, because Marx had convinced them that there was no hope for them in industry apart from some such cataclysm.

In the last few days Sir Herbert Hambling, the vice-chairman of Barclay's Bank, had just addressed a suggestion to the international business world, that the grave position of European and British affairs should be reviewed in terms of values. He appealed to the European nations with currencies widely removed from pre-war values to face patent facts. "It is," he said, "in the last degree, absurd and reprehensible to suggest that devaluation of a hopelessly depreciated currency is a form of veiled dishonesty, that it is in fact repudiation of debt. How can it be dishonest to recognise patent facts? On the contrary I think that the country which, having a hopelessly depreciated currency, first takes this step, will be adopting a statesman-like course, and, speaking as banker, I consider that its prestige will thereby be greatly increased."

Sir Herbert Hambling argued in the same address that this definite formulating of a new standard of values would help our British unemployment problem, as we should then be much more easily enabled to trade with the country that had taken this step. How could people trade, he asked, when they did not know what money would actually be worth by the time a particular service had been completed and the payment had become due?

The Printer and the Valuer.

Orderly minds were among the prime needs of this perilous time and in regard to nothing was mental orderliness of more importance than in regard to values. This was true on the great scale. It was true of the relatively smaller scale of printing industry. Lord St. Leonards, an old-time English judge, used to insist that man owed it to himself and to his dependents to know the value of what he possessed. Since 1913 saw the costing campaign formally inaugurated, printers had been thinking much more clearly and resolving more manfully as regarded their expenditure on labour and stock—their variable capital—but they still were too often guesstimating and quessimating wildly in regard to that part of their fixed capital known as plant. Mr. Hazell and other costing exponents had constantly advised printers to have their plants valued. Mr. Colebrook hoped it was not out of order to suggest that printers should regard this value ascertainment as a part of their accountancy, to be freshly reported to them by a disinterested specialist every year. It could be so reported for costs corresponding to those of average accountants.

One comparatively new feature of plant insurance was very interesting; and here the valuer could greatly help. To illustrate, he would suppose that Messrs. Long, Primer and Son had a plant independently valued and certified and correctly insured for £8,000; it might conceivably take £12,000 to provide the identical plant all new. On total destruction the fire office would pay £8,000 under their contract of indemnity—the insurance policy—but another £4,000 would have to be found somewhere. An insurance company was now willing to give insurance for such a difference; under a separate policy; they called it a reinstatement policy. To be sure, they would only pay if there was actual reinstatement; and they required the insertion in this reinstatement policy of the "Average Clause." Mr. Colebrook did not quite share the common dislike of the average clause. If all policies made it clear by average clause or in some way that the policy holder would be deemed to be his own insurer for any excess in the real existent value over and above the amount on which premiums were paid, it would naturally lead the man who insured his £8,000 plant for £6,000 to alter his plan and insure for the whole £8,000; and, this becoming general, the fire offices would gain a large extra revenue over the kingdom. There was real competition for fire business; insurance companies indeed were suffering from the lack of general enterprise, especially of building enterprise; and quite probably rates would tend to fall a little if premium totals increased, as they naturally would if average clause insertion became general. Policyholders might find they got full insurance for the same premiums which formerly would only have provided three-fourths insurance.

The fire policy was a contract of indemnity within the amount paid for, and each particular allocation was a separate contract of indemnity. If a man had valued his machines £500 too highly in arranging his policy, and his case room allocation in the policy was £500 too low, he could alter this at any

moment before a fire, but he could not alter it after a fire. Sometimes a fire office could not pay the full damage, though the insurance premiums had been ample; they could not because of defects in drafting the policy. Insurance brokers could give most useful help.

The managing director of a large printing firm said to him, "I decided to make my own plant inventory. It spread over more than a year. By the time I was through with the last part, the first part required revision." Probably, too, he had made some wrong inclusions and wrong exclusions. His appraisements were in any case not disinterested, nor based on large comparison with other plants.

Were fire offices grudging? Mr. Colebrook said emphatically from his experience of fire settlements that they were not. He never desired to meet fairer or more business-like men than the fire office representatives he had encountered in fire loss adjustment. "We are always so pleased," they said, "when a disinterested business-like statement of the loss and the values is placed before us. We don't want to quibble." He was quoting exact words of responsible men. One such authoritative fire office spokesman said to him, "Fire settlement should be the simplest thing in the world. It annoys me when a man says 'You've acted fairly, but still I'm £5,000 a loser by my fire.' I say 'Why?' It was for you to know and to be able to show your plant value, and if you knew it and had insured for the proper sum we would either have paid a sum satisfactory to you or if there'd been any difference between us we would have installed for you an equivalent plant. Why should you have been such a loser over your plant? That is what I ask such a complainer," the authority concluded.

Mr. Colebrook, in conclusion, dealt with various points concerned with valuations directed to particular purposes, such as amalgamations or probate settlements, or financing arrangements.

Mr. James Wallis.

News reaches us by mail from Nova Scotia of the death on October 21st of Mr. James Wallis, of Yarmouth, Nova Scotia, a printer from this country who succeeded in making his mark in the country of his adoption. The illness to which he succumbed occurred while he was on a few days' visit to his son, Mr. James J. Wallis, editor of the *Digby Courier*, Nova Scotia.

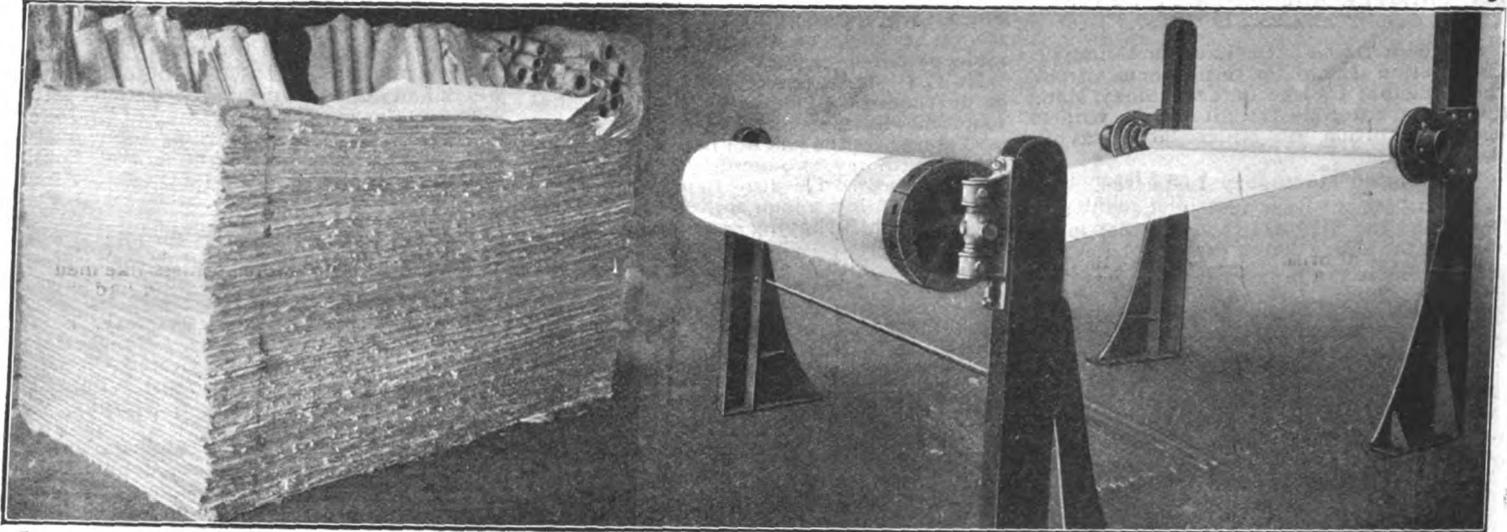

Mr. Wallis was born in Hanley-on-Trent, Staffordshire, England, and was in the 73rd year of his age. When a young man he served a seven-years' apprenticeship as a printer and bookbinder in Newcastle-on-Tyne, and previous to going to Nova Scotia he worked at that trade in Birmingham at White and Pikes, and also in West Bromwich at Wm. Britten's. Thirty-nine years ago Mr. Wallis went to Yarmouth and entered the employ of the late J. D. Rolston, who then controlled the *Yarmouth Times*, taking charge of the job printing and bookbinding departments. He remained in that employ until January, 1898, when he resigned and with P. St. C. Hamilton purchased the *Yarmouth Daily News*, and they continued that publication until September of the following year, when it ceased under that management and Mr. Hamilton went to Montreal.

Mr. Wallis resumed his former position with the *Times*, but it was only a few weeks when he again resigned and established a job printing business on his own account. Later he published the *Yarmouth Daily Post*, which he conducted until about two years ago, when he went to spend the winter in California. Owing to a kindly and genial disposition Mr. Wallis made friends wherever he went and was a favourite with a large circle of acquaintances.

THERE is no better or more wholesome humour than that contained in the pages of *Punch*, and the special annual issue known as the Almanack always presents a feast of most excellent quality. The Almanack for 1923 is equal to its wonderful predecessors. A special feature is represented by Mr. Punch's colour pages; a happy combination of fun and art. Altogether a good shillingsworth.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES :

- | | |
|---|--|
| <p>1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.</p> <p>2.—It occupies a space of only six feet on the run, and is quite noiseless.</p> <p>3.—The power required is such a small amount that it can be driven from any existing shafting.</p> | <p>4.—Centres of any kind or width can be worked on the machine.</p> <p>5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.</p> <p>6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.</p> |

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

At the invitation of the Lanston Monotype Corporation, Ltd., over 50 members visited the Municipal College of Technology, Manchester, on Saturday, the 4th inst., to witness a demonstration of Miller labour-saving machinery.

Lanston Machinery Inspected.

Messrs. W. J. Beck and J. Lewthwaite welcomed the visitors, who were first interested in the Miller Platen Press Feeder, which was doing good clean work at the rate of 2,400 per hour. The operator was freely questioned and requested to carry out various tests, which proved satisfactory, and showed that the feeder had been brought further towards perfection, particularly in regard to solidity. We speak correctly when we state that the platen machine has claimed more accidents than any other machine on the market, so that by exchanging hand-feeding for mechanical feeding there is every prospect for the platen machine to become a safe one.

The Chandler and Price Gordon Press opens well out, the platen being brought back for easy laying on, therefore giving greater opportunity for the sheet to be laid to register; also, the varying speed arrangement allows the operator to suit the running to whichever class of paper is being printed, as every practical man knows that he cannot run manifold at the same speed as a stouter quality of paper. Then there is the question of delivering the printed sheet. The Miller Platen Press Feeder delivers the sheet on the top so that the operator can see at a glance how the work is progressing, whilst the cleaner output of the higher delivery is a great advantage over the low delivery type.

The Miller Saw Trimmer claims to be the fastest mortising machine made, being a necessary tool for every printer who has a great number of blocks to handle, or has demands for cutting ruled, type-high plates, electros and mitreing. The complete Miller Saw Trimmer Equipment, saws, trims, mitres, grinds, undercuts, mortises, notches, bevells, routs, rabbets, drills, jigsaws, broaches and planes type-high, operating in either wood or metal, and giving the compositor square blocks and the pressman, when "the labourer's task is o'er," a better opportunity of reaching heaven than he has under conditions where such a machine is not installed.

The two hours spent in testing first one machine and then another were very interesting and satisfactory to all.

The party afterwards wended their way to headquarters, the "Mitre" Hotel, where tea was served and appreciated.

The Machinery Discussed.

President Thomas Rignall then invited the members to indulge in free and fair criticism—not carping criticism—as it would be beneficial to both the engineer and the printer.

He then called upon Mr. Beck who said that the machines sent out under the name of the Lanston Monotype Corporation, Limited, were built for profit to the purchaser, and the object of the Corporation was to keep equipment up to date. It being Armistice Day, every Britisher's mind, in all parts of the Empire was turned to the Great Sacrifice many comrades had made in those years of stress which had gone, and the like of which he hoped would never again return. Since then, all had been looking forward and attempting to make good, whilst statesmen had been preaching for greater production to make up for the waste of those ravaging years, and he claimed that the Corporation had endeavoured to make good in the production of modern machinery such as the company had seen that afternoon. Since the last exhibition held in Manchester there had been one held in Leeds, and the Yorkshire members of the P. M. and O. A. when asked for criticism, desired that the machine should be strengthened in certain parts, and their wishes had been carried out, as seen in the model running that day. The British printer preferred a more solid machine than his American cousin, hence the desire of the Corporation to meet the needs of the British purchasers. The saw trimmer was an indispensable article in any fairly large office as its use was manifold in the hands of a man with brains.

Mr. F. E. Robinson agreed with the previous speaker that the saw trimmer was a handy

machine, and the way he had seen it pierce and trim blocks as quick as one could say "Jack Robinson" was proof of its usefulness. In the platen machine there was a certain amount of vibration, but part of that might be caused through the temporary foundation on which the machine stood, and the great speed it was running. He desired to know if the feeder could be attached to any other make of platen machine.

Mr. C. P. Mason remarked that the machine would require the attention of a skilled craftsman. It was a splendid machine; its output was great; but he had not been able to compare it with, say, two hand-fed machines of a similar make. He also thought the T.A. would not allow a man to attend to another machine whilst having that class under his charge.

Mr. E. L. Pitts pinned his faith to the machine, having had daily under his care one of the earlier types shown two years ago. It was a machine that required a man with brains; therefore, no one would think of placing a valuable machine in the care of a person who was unable to get the best out of it. The crown folio he had running had that very morning printed a job of 10,000 in four hours—2,500 runs per hour; not only that, the register was perfect, and his test was to put a printed sheet through three times, the only difference being the added amount of ink caused by the three inked impressions. The printer who installed such a machine had to cater for it, and the more work he had, the larger would be his profits on output. As to being a one-man machine, his operator also looked after a jobber at the same time.

Mr. J. H. Nuttall was struck with the various uses to which the saw trimmer could be put. For his own purposes he would prefer a larger table on which big blocks could be easily manipulated.

Mr. A. Harrison approved of the varying speed on the machine, as it was a necessary advantage for certain classes of work, and particularly on a cold morning when one might be troubled with plucking, through travelling at a greater speed than, at the existing temperature, would permit of the paper and form separating without lifting the face of the former.

Mr. W. Smith remarked that on a platen machine with a revolving disc one might be liable to obtain even inking distribution on all parts of the form, therefore he would like Mr. Beck or Mr. Lewthwaite to explain how they would deal with a form that had heavy type and, say, half-tone blocks as well.

Messrs. Young, Garrett, Liddiard, F. J. Hughes and others also put questions.

Mr. Beck, replying, said that the ink duct had never given them a day's trouble, and machines had been running daily for years on manifold and cardboards at average speeds of 1,500 per hour, whilst the output for ordinary stock averaged 2,500 per hour. The feeder could not be attached to any other machine than the Chandler and Price Gordon Press. For the work mentioned by Mr. Smith the ratchet pawl could be disconnected and by means of a thumbscrew the disc could be locked. The ink knife being flexible, the supply could be varied to suit the light or heavy parts of the form, and the rollers having riders attached gave the extra distribution needed for any class of work. Good work required good rolling power and the lateral movement of the rider prevented streakiness, as proved by the yearly output. There was also another consideration with regard to rollers, and that was the prevention of fraying during hot weather, so if the pyramid suggestion was to be put in operation there probably would be trouble from that source without any increased benefit in rolling power. The machine had been thoroughly tested in many ways so that difficulties would not arise. Breakages were infinitesimal, and as all parts were stocked in London replacements were quickly supplied. In England there were 320 Miller Feeders in operation, and throughout the world there were 16,000. Usually one man operated two machines, and with a girl assistant could look after a battery of four. The operators had not served a seven years apprenticeship as machine minders, yet the class of work produced was excellent. The specimens around the exhibition were all done on the platen, the solid black impressions right up to the three and four colour samples. With reference to the Saw Trimmer, a good man should be put in charge, and it was up to the purchaser to say who he should be, because the machines were supplied to engravers, process workers, pressmen, compositors, and stereotypers, therefore no section of the craft could specially claim it.

The President thanked Messrs. Beck and Lewthwaite for the opportunity of seeing such useful machines, and asked the two gentlemen to convey to the Lanston Monotype Corporation the members' appreciation for the hospitality meted out to them.

President Robinson seconded, and Messrs. Beck and Lewthwaite replied.

Association Business.

The members then settled down to business which had been left over from October 28th—first interposing the nomination of Mr. John W. Philbin, letterpress machine room overseer, Messrs. Richard Johnson and Sons, Medlock Printing Works, Manchester. After the various questions had been asked the nomination was confirmed.

The nomination of officers for 1922-23 was as follows: President, F. E. Robinson; vice-presidents, F. E. Liddiard and F. Scouler; trustees, Edward McVay and J. H. Nuttall; treasurer, Jas. E. Mayo; secretary, F. J. Hughes, 424, Moston-lane, Manchester; executive council, J. Ball, E. Garrett, Chas. N. Knowles, F. Scouler (second year), F. Burnett, A. Gavin, F. E. Liddiard, E. Murphy, W. Smith and J. Winstanley.

Mr. F. E. Robinson thought there should be an official tyler at the Council and general meetings, and he recommended its consideration at the annual meeting in December.

Mr. Albert Hellewell said that if such a position were created he would volunteer to act for the first year.

It was agreed that the minutes of the October and special general meetings should be read at the December meeting, as that evening had been a continuation meeting.

WEB MAC.

DURING the period January to June last, exports of cellulose from Switzerland represented 4,775 tons, against 1,618 tons in the first half of 1921; news-print rose to 6,216 tons from 2,292 tons, and paper for writing and book printing to 766 tons from 340 tons.

MR. FREDERICK H. HUBBARD (Fredk. H. Hubbard and Co., paper agents, Temple Bar House, 23-8, Fleet-street, London, E.C. 4), has taken into partnership Mr. H. J. Burholt. The firm, whose name will be unaltered, represents Messrs. Leonhardt Sohne, Crossen-Mulde, Saxony, and the Koninklyke Papierfabriek v/h Pannekoek and Co., Heelsum, Holland. Mr. Hubbard was a partner in the late firm of Dickenson and Hubbard, and Mr. Burholt increased his reputation in the paper trade this year by winning the Woollacott Cup in the bowls competition arranged by the Stationers' Social Society.

A REUTER message states that it is reported from Moscow that large paper mills at Rostoff have been burned down and considerable stocks of paper destroyed. Several arrests have been made.

"The Training of Apprentices."

Some Manchester Views.

Basing his remarks upon practical experience in the Municipal College of Technology, Manchester, Mr. E. Garrett recently read an instructive paper on the above subject, before the Printers' Managers and Overseers Association. We here give an epitome.

The subject of technical training of apprentices seems to be regarded as a highly controversial one, due partly perhaps to the fact that it can be viewed from so many angles or standpoints. It is not easily defined, yet too conveniently interpreted to have a variety of meaning. The usual source of definitions are somewhat obscure. The word "technical" means "pertaining to an art or profession"; "technology" is "the science of industrial art"; "technologist" is "one skilled in technology." The word "training" would seem to be much better understood, and the orthodox definitions are certainly capable of conveying something which is very clear. We have "training" meaning to train, to discipline, to teach and form by practice, to educate. By a simple process of deduction one is able to define technical training as scientific teaching. Scientific teaching of an industrial art is not a usual obligation undertaken when an employer indentures an apprentice. The usual undertaking is to teach him his trade. How many realise what the responsibility is? How many apprentices at the end of their apprenticeship can confidently say their firm have done everything they ought to have done to ensure that they should be capable members of their profession? There have been many cases where it would appear that employers have not been much concerned about the progress of apprentices, the explanation perhaps being due to the fact that an employer need not be a practical man. It is proved over and over again that it is not essential that he should be. There are other and not unimportant qualifications for the employer, and it is not certain that apprentices would be better trained if all employers were practical men; things might be better, or they might be worse.

The Overseer's Responsibility.

At all events, in nearly every case, the training of apprentices rests with the manager or overseer, though, be it noted, not as his paramount duty. It would be interesting to have a considered opinion as to just where this duty of training apprentices stands in relative importance to other duties of an overseer. Yet, no doubt, the onus of an unsatisfactory trained apprentice discredits his employer. It is not possible for any system of training to have the desired result with every type of apprentice. The caprice and temperaments of both overseer and apprentice can conceivably influence the relationship between them in innumerable ways. Again, the plant in a particular works or the range of work of a certain department may be of such a character that the apprentice might be led unconsciously to believe that what he sees in his own department embraces the whole realm of printing practice, but may receive a shock when a change is made in management or he is himself obliged to seek another situation, and whilst officially or legally an overseer is a nonentity, he is by custom expected to make opportunities for the various apprentices (in a large works) to become efficiently acquainted with the work of the department.

In not a few cases no special scheme is laid inside the works for the apprentice to receive an organised training. He may or may not have good opportunities. Most apprentices get good opportunities, but some do not take advantage of them. It is not sufficient that an apprentice shall be able to do all he is required to do in a particular works. This is not an indication nor a guarantee that he has a thorough knowledge of his trade. How many overseers instruct their apprentices as to the many troubles arising from and inherent to paper stock, or relative cost of production, or the bases of inks, effects of driers, or why bronze blue should not be used for soap wrappers, or why a methyl violet ink is not suitable for spirit varnishing?

Place of Technical Institute.

A good workshop training is very valuable, but it should be supplemented by a compulsory attendance in a technical train-

ing institute. To understand why a thing is done adds a pleasure to the doing, and it goes without saying, that the more one learns of his trade, the more pleasant and interesting the work becomes. Conditions in a technical institute may not be the same as a workshop, but there is no reason why after a class has had a short existence, it should not attempt to adopt something of a competitive spirit for profitable rates of production. New methods and machinery give place to older ones and require not a reduced amount of skill, but skill of a higher standard, and only technical training, supplementing good sound workshop training will furnish the kind of worker required. Technical institutions as a rule enlist the best possible practical craftsmen who have an enthusiasm for their trade and an aptitude to teach, and although it may be said the equipment is not always what it might be, we in Manchester have an equipment second to none in the United Kingdom. Yet one thing is lacking. There is not full advantage taken of the facilities offered to apprentices. What is wanted is compulsory attendance in the day time at a recognised technical training centre as "a condition of apprenticeship."

Discussion.

Mr. C. D. Hammond remarked that it had been stated that some overseers are jealous about apprentices becoming efficient. He was sure that no self-respecting overseer would ever think of such a thing. The better the craftsman under his charge, the more he appreciates that man, because there is less anxiety about the efficiency of the work entrusted to him. He was not an advocate of day classes if the apprentice had to pay the fees. At the present time very few employers pay the fees for evening classes, whilst others offer to refund outlay if the lad is successful.

Mr. F. E. Robinson said very few managers and overseers would care to approach their employers to pay the fees of apprentices attending day schools if the term amounted to £15 as queried by a member. Many parents were paying the fees for their sons to attend evening classes, and they could ill afford the money in view of the small wages paid to the average apprentice.

Mr. E. Murphy thought we were pampering the apprentice too much. We should encourage him to develop a certain amount of independence.

Mr. J. Winstanley said the employers ought collectively to send their apprentices to the classes, take a greater interest in the young craftsmen, and see that every student obtains full benefit of the classes.

Mr. J. H. Nuttall said his firm had decided that apprentices shall attend day classes.

Mr. Edward McVay remarked that many boys who attend the classes will never make printers, and there are others who go through the courses who owe their present positions to such institutions as the Municipal College of Technology. The teachers are there to impart of their best, and the lads who attend are worthy of every assistance. It is surprising how few employers pay the fees, thus showing how small is their interest in the apprentice and the craft, to whom, and to which, they owe so much. Managers and overseers, he said, should take this subject up seriously, and get the young people interested in technical education, because it is their duty to do so, seeing the employer in many instances neglects his part of the contract.

The secretary suggested that a committee of five might be formed to co-operate with the employers and the College authorities if they desired the experience of the members of the P. M. and O. A.

Mr. Winstanley thought that such a committee could only be a success if the Centre went forward with a scheme upon which the combined committee could build.

Mr. Nuttall said the employers should be shown that by apprentices attending day classes for three years they (the employers) would after that period begin to reap the benefit derived from the initial outlay. A clause might be put into the indentures to that effect, and also some means brought to bear on the parents or guardians to see that the youth attended later continuation courses.

Mr. Mayo intimated that all overseers ought to press their employers to provide ways and means for apprentices to attend the day classes.

Mr. Rignall recommended the discussion of the problem by the Council.

Messrs. F. E. Liddiard, A. E. Cox and others also spoke.

Mr. E. Garrett, replying, said: "Apathy is the great drawback to all advancement. We have taken great pains to ascertain the approximate number of apprentices in the Manchester area, and find there are not 200 letter-press and less than 50 in the lithographic branch. With reference to the remarks about the granting of certificates by the College, I might say that whoever completes the full course and secures a certificate, will hold his own with other craftsmen. This Centre should promote a scheme to compel employers to send apprentices to the College in the day-time for one or two days each week. It would be to the advantage of all concerned. If an apprentice attended for three years he would have no fear about his continuing the studies up to the end of his apprenticeship. He would be willing to co-operate in any way that would benefit the apprentice and the craft."

It was agreed that the new Council should further consider the subject.

WEB MAC.

"London Ad Club" Annual General Meeting.

Competition for "The Caxton" Cup.

The annual general meeting of the London Ad Club was held on Tuesday, November 7th, 1922, in the rooms of the National Advertising Society, Fleet-street. Mr. W. Osman presided over a well-attended meeting.

The report of the hon. secretary showed that the club had experienced a most successful year, many well-known speakers, including Sir Charles Higham, Mr. Philip Emmanuel, Mr. Alderman Smith, Mr. W. H. Burchell, Mr. Sidney Allnut & Mr. C. Thompson Walker having addressed the club on various occasions. During the summer visits were paid to the *News of the World* and Linotype and Machinery Limited.

It was decided, however, to have more meetings on the "round table" basis, and an attractive programme is being arranged. Thus the policy of the club in future will tend to discussions and debates, but there will be several addresses by well-known speakers, and the social side is not being neglected. The yearly subscription, dating from date of joining, is now fixed at 15s.

The "Caxton" cup, which is being presented by Mr. W. H. Burchell (governing director of "The Caxton Press, Ltd.") has aroused keen interest. It has been decided to hold a yearly competition for it in the form of an essay. The subject of the essay will shortly be published, and the result will be announced and the cup presented at the annual dinner early in January.

Following the appointment of Mr. Cyril King as hon. treasurer, the committee was appointed for 1922-23. Mr. E. V. Lawes continues as hon. secretary.

Irish Printing Wages.

At a conference called by the Ministry of Labour between the Dublin Master Printers' and Allied Trades' Association and representatives of the workers of the different units of the printing trade, the following amended offer of a proposed reduction of wages was made (says the *Dublin Evening Telegraph*) by the employers to the craftsmen in receipt of £4 12s. 6d. per week, the men's representatives agreeing to recommend its acceptance:—A reduction of 5s. on week ending December 2nd, 1922; a further reduction of 3s. 6d. on week ending January 6th, 1923, the resultant rate to be stabilised until May 31st, 1923. The conference adjourned.

MR. CECIL M. HEWORTH the pioneer of the cinema industry in this country, contributes to the November number of *Pearson's Magazine* a very interesting account of his early film experiences and the birth of this great enterprise in his cottage at Walton-on-Thames. Other entertaining articles are contributed by Mrs. Elinor Glyn, "On Living with a Difficult Husband," and by Mr. Barry Pain, on "How to Make a Tiger Sleep." This number provides an unusually rich feast of good fiction. "Sapper" adds another to the thrilling adventures of his new hero, Jim Maitland.

Paper for Books: Its Manufacture and Quality.

Craft Lecture by Mr. R. W. Sindall, F.C.S., with an Introduction by the President of the Papermakers' Association.

The second of the craft lectures which are being held at Stationers' Hall was delivered on the 19th instant by Mr. R. W. Sindall, F.C.S., who took for his subject "Paper for Books." Mr. W. Leonard Tod, J.P. (President of the Papermakers' Association), occupied the chair, and he was supported by Mr. H. Hill and Mr. Edward Unwin (past masters of the Stationers Co.), Mr. Deputy Singer, Mr. A. W. Foster (secretary of the Papermakers' Association), Mr. J. R. Riddell (Principal of London School of Printing), and others.

A Short History of Papermaking.

The Chairman, in introducing Mr. Sindall, entertained the large gathering with a short resume of the history of papermaking. While they could not tell exactly when paper was first made, it was something like 200 years B.C. that it was first manufactured in China. The next date given by Mr. Tod was 750 A.D., when the Arabs of Samarcand were attacked by Chinese. The attack was beaten off, and some of these Chinese were taken prisoners; among them were a number of papermakers. These Chinese prisoners taught their captors the art of papermaking, which was eagerly taken up by the Arabs. For something like 400 years all the supplies of paper in Europe came from Arab sources, where it had been implanted by the original inventors. There was in existence to-day in a University library in Germany a manuscript of the year 866, which was believed to be the oldest of all paper in existence to-day. The earliest manuscript in England was one of the date 960, which was now in the British Museum, while at the Bodleian Library at Oxford there was one of the date 974. This latter example, curiously enough, was printed in Samarcand. About the middle of the twelfth century (1150), papermaking was first established in Europe, being introduced into Spain by the Moors. It was rather a curious fact that we of to-day were inclined to look upon the Chinese, the Arabs, and the Moors as more or less barbarians, and yet it was to these people that we were indebted for the knowledge of how to make paper. This material, he thought—although being a papermaker he might perhaps rate the making of paper too highly—together with the manufacture of paper, and the use of paper had been among the greatest agencies in promoting civilisation. (Hear, hear.) According to the Encyclopædia Britannica, when the Moors were driven out of Spain, the Spaniards continued the manufacture of paper, although the product they turned out was very much inferior to what had previously been made by the Moors. From Spain the art naturally passed over the border into France, and about 1189 the first paper mill was established in that

country. It is believed that somewhere about the same time papermaking was introduced into Sicily by the Arabs. The first record of a mill in Italy was about 1276. The first mill in Germany brought them to the year 1320.

Papermaking in England.

Mr. Tod said they could not tell when paper was first made in England, but they had certain records dating back to near the year 1300. Whether that paper was of British manufacture or whether it was French or Spanish paper they could not tell. The earliest British record written on paper in existence was one of a Hustings Court held in Lyme Regis in 1309. In some of the museums in colleges at Oxford and Cambridge there were a number of records of dates shortly following that. The first manufacture that they actually knew of in England was early in the sixteenth century, when John Tate made paper at a mill in Hertford. In the year 1589, or possibly a year or two before that, Sir John Spielman, who was a jeweller to Queen Elizabeth, founded a mill in Dartford. That was the first mill in Kent. In this connection Mr. Tod mentioned that the monument on Sir John Spielman's tomb, which was in Dartford Church, had recently been restored. It had been getting into bad repair, and he was glad to know that it was now in good order.

Of course, in those old days the processes of papermaking, which were all carried out by hand, were very slow and expensive. All the printing was done by hand also, including the books that were published. About 1436 printing from movable types was invented, and this led to a great increase in the demand for paper. This, in turn, led to people trying to find better and cheaper means of making paper and of producing it in larger quantities. In the year 1798 a young Frenchman discovered a method of making paper in the web. This was improved upon and introduced into England in 1802 by Henry Fourdrinier. The principle of the Fourdrinier machines was the principle which was in use on papermaking machines to-day. There had been changes in detail, but the main principle remained the same as in 1802, and, of course, was working very successfully. Naturally this new method of manufacturing paper in the larger quantities which were produced led to the extended uses of material. The consumption of paper had gradually grown, until to-day it was multiplied by some hundreds of times that of 1802. The Book of Ecclesiastes observed that the Preacher said "Of the making of books there is no end." He (Mr. Tod) wondered what old Solomon would think if he could come back to earth to-day and see the number of books in the shops. Of course, the books in Solomon's

time were not printed, but were written on parchment and possibly papyrus, which was not paper, although it was derived from vegetable fibre. To-day books were printed on paper, and it was about that paper for books that Mr. Sindall would speak to them.

The Life of an Average Book:

Mr. Sindall illustrated his instructive lecture with lantern slides, examples of printing, and samples of paper, in all of which the gathering took a deep interest.

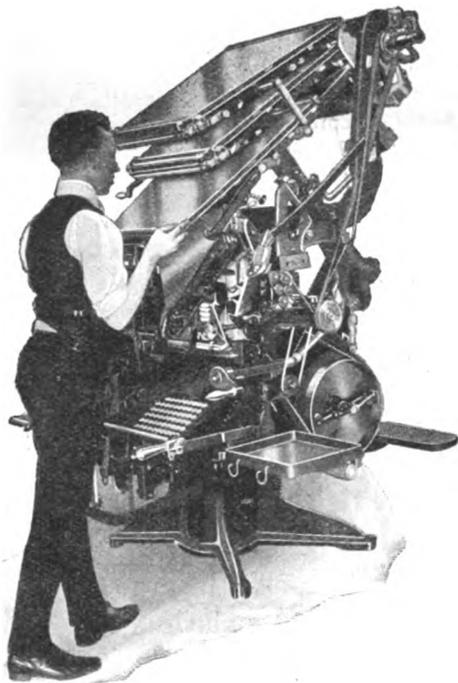

Tracing the behaviour of the average book by its history under the conditions of frequent use in the free library, Mr. Sindall mentioned that the life of a book is a factor not very often taken into account since other considerations are more prominent and have greater weight. One might delicately suggest that some publishers would regard it as of no importance, for second and third editions are easily produced to the ultimate benefit of publisher, papermaker and author. Speaking of the durability of book papers, the lecturer mentioned that according to a questionnaire of the Library Association, it was found that it was possible, in general terms, to classify library books according to the paper used into four classes. (1) Books printed on light bulky paper known as *antique* or featherweight. (2) Books printed on heavily loaded paper, well-calendered. (3) Books printed on various types of art paper. (4) Books produced from papers of moderate thickness not unduly loaded with mineral matter.

The Quality of Paper.

It is clear that the life of a book is intimately related to the quality of the paper of which it is composed. The method of binding obviously has considerable influence, and no account of the durability of a book is complete without due regard to this factor. Mr. Cedric Chivers, the well-known bookbinder of Bath, investigated this question closely in 1910, and determined that the nature and quality of the paper has an important bearing upon the question of the method of binding. The immediate consideration is, however, the study of the paper itself.

The modern development of printing and the new processes for the mechanical production of illustrations has given rise to a corresponding development in papermaking for the manufacture of papers calculated to be most suitable in particular processes of illustration. It is a matter of common knowledge that the paper may be suitable for the immediate effect desired, but in point of durability it may be very low in the scale. This is perhaps most readily exemplified by the

injudicious use of heavy art papers. It is surprising after the many years experience with this class of material that so many books are printed on such paper, the durability of which can only be guaranteed when the book is never used and is kept carefully packed away on a dry shelf.

Some Suggestions.

Mr. Sindall went on to deal with the factors which influence the publisher, with cotton rag and mechanical wood pulp, the make-up of a book and normal book paper (made of chemical wood pulp, esparto or rag used singly or in any desired proportion).

Then he submitted the following conditions which should be fulfilled by a suitable paper for the average library book, having regard to the imperative necessity of moderate price:—

1. **FIBROUS CONSTITUENTS.**—Esparto and chemical wood pulp in any convenient proportions.

2. **MINERAL MATTER.**—Should not exceed 15 per cent.

3. **BULK.**—The thickness of the paper should not exceed .125 to .150 millimetres (.0050 to .0060 inches). Papers much thicker are apt to crack when folded and the leaves do not lie flat when the book is opened.

4. **STRENGTH.**—The strength of the paper cannot be specified in definite figures, as this factor would largely depend upon the bulk or thickness, as well as the nature and proportions of the fibrous constituents.

In general terms it is sufficient to state that the pulp should be beaten so as to give a close, dense sheet of maximum strength. Such papers not to lose more than 50 per cent. of their strength when folded four times.

5. **"DIRECTION" OF PAPER.**—It is well known that the machine direction of the paper is stronger than the cross direction. The life of a book may be prolonged by making the machine direction of the paper parallel with the width of the book, i.e., across the page from the back of the book to the edge.

6. **ILLUSTRATIONS.**—If art paper is resorted to for the purpose of illustration it is better to use a thin art paper coated on one-side only and to sew in these loose leaves in preference to pasting.

Finally the lecturer referred to supercalendered imitation art papers, which, he said, were produced in such perfection that they might well be employed in place of art paper.

At the close of the discourse, Mr. Sindall answered a number of questions, and a cordial vote of thanks was passed to him on the motion of Mr. Deputy Singer, seconded by Mr. Edward Unwin.

A cordial vote of thanks was passed to the chairman on the motion of Mr. Sindall.

Paper Trade Golfing Society.

The November meeting of the Paper Trade Golfing Society was held at Walton Heath on November 16th.

In the competition for the prize presented by Major Frank H. Bowater for handicaps of 11 and under which took the form of a copy of an old Gold Cup from the Mansion House collection—Mr. A. S. Batchelor was successful with a score of all square, Mr. F. A. Skerratt being the runner-up with a score of 2 down; Mr. H. F. Higgins and Mr. R. D. Oldham tying for third place with 4 down.

The competition for "The Cardiff Cup," presented by Messrs. Thomas Owen and Co., Ltd., for handicaps of 12 and over, was won by Mr. G. Buchanan with a score of 3 down, Mr. E. H. Raynham being second with 4 down, and Mr. E. C. Lait third with a score of 5 down. Mr. Buchanan, therefore, becomes the holder of the cup for the first year.

The meeting was well attended, the following members being present:—Chas. Baker, Kenneth F. Baker, A. S. Batchelor, Major F. H. Bowater, G. Buchanan, C. R. Craig, A. S. Duff, Norman Duxbury, R. G. Harvey Greenham, F. C. Harding, S. A. Harding, C. E. Higgins, H. F. Higgins, J. W. S. Johnston, P. W. Kennett, E. C. Lait, L. C. Lewsey, T. T. Mackenzie, J. Macnaughton, Captain C. R. Mullings, R. D. Oldham, W. H. Palmer, E. H. Raynham, S. G. Saunders, Harrison Savory, John Seddon, G. W. Shilcock, F. A. Skerratt, W. Sommerville, Douglas Spicer, J. Leonard Spicer, Ronald Spicer, E. Lewis Winn, E. Worsley.

In spite of a dense fog which made play very difficult, many good scores were returned.

Mr. Howard Hazell on Costing.

West and North-West M.P.A. Meeting.

The monthly meeting of the West and North-West London Master Printers' Association, held at Westbourne Park Institute on Monday, November 20th, inaugurated the London Costing Campaign in this district, the principal speaker being Mr. W. Howard Hazell.

Routine business was first disposed of, during which it was reported that it had been decided that the headquarters of the Federation for the annual meeting and cost congress in May would be the Great Central Hotel in this district, and the members were asked to take an active part in making the visit of the provincial printers and their lady friends a great success.

The chairman, Mr. S. Sidders, then introduced Mr. Howard Hazell by addressing him as head of one of the historic printing firms of the country and a gentleman who had devoted an extraordinarily large amount of time to the promulgation of costing to the benefit of every printer in the United Kingdom.

Why Are We Printers?

Mr. Hazell commenced his address by asking the question "Why are you and I printers?" and proceeded to answer the question by stating that printers were in business to make a living by producing a commodity that was required by, and necessary for, the community. Unless that commodity was sold on a cost-plus-profit basis the living which resulted was unsatisfactory. The finding of cost was a complete riddle, complicated and difficult of solution. The operation of distribution was performed more often than not weeks after the invoice for the job had been received by the customer, and there were machines of different values with long lives and short lives. A system of costing must be simple to be satisfactory.

Mr. Hazell's next question was: "Why should a printer put in the Federation system when he has one of his own?" He (the speaker) had seen many of these systems, but they were either cumbersome or incomplete. Many of them comprised merely the addition of a flat percentage to wages, which was an absurd method of costing out printing.

Slipshod Costing.

Some supplementary questions were then put. "Do you know the cost of the various processes? Do you know the cost of every job? Do you know your costs from day to day? Do you know the effect of a rise or a fall in wages? Do your costs balance with your financial books?" The Federation system, he said, answered all these questions satisfactorily—it was a barometer which indicated every rise and fall in wages and in production.

Many printers, said the speaker, were satisfied if the balance-sheet showed a profit. But no balance-sheet could possibly indicate the fat and the lean jobs. The Federation System found the cost of every department of every process, and of every job, and whilst it was not possible to sell every job at the same percentage of profit, the line was definitely drawn between cost and profit or cost and loss. It would show up the weak spots and indicate where to pull down and where to build up. The Federation System when properly installed ran on oiled wheels and the cost both of installation and working afterwards was small.

Some printers having glanced through the cost-finding book were appalled at the number of forms which were shown therein. The same printers would be equally appalled and mystified if they sat down to a book on double-entry bookkeeping. It must be remembered that the book was a treatise on a scientific subject and the whole subject as it applied to printing. By its aid anyone with a grasp of figures and a knowledge of the trade could instal the system without other aid. But as experts had been engaged by the Federation and were available at a very moderate fee why should a printer spend time working out the details for himself?

Other Industries and Costing.

Mr. Hazell went on to say he was a member of an Association of Cost Accountants in America and the publications of this Association covered costing in a great many sections of industry, so widely apart as canning salmon

and weaving flax, but the broad principles were the same in every system.

Other industries in this country were asking why they could not have a standard system like the printers. Papermakers, bookbinders, tanners, and others were looking into the matter, and the Federation Costing secretary (Mr. Williamson) had just completed a System of Costing for the Federation of Paper Box Manufacturers.

The printers' system was not a new-fangled idea, it was used by hundreds of printers whose businesses ranged from turnovers of over a million to those of a few thousands. It was at work in the cities and in the villages, in offices where the huge rotary produced its ten thousand copies an hour, and also where the plant consisted of a small cylinder machine and an Arab platen. None turned it out, and many had found it to be the salvation of their businesses.

Economy of the System.

Some feared that it raised the cost of printing. This was a grave error. What it did was to find the cost. It might find a job costing £12 which was being sold for £10, and would enable the printer either to get his customer to pay more or show him what economies could be introduced to reduce the cost. The system would find out the work which was most profitable and enable him to cast off the unprofitable and so give him time to cultivate the better class of work.

The Federation experts would easily divide the business into the best sections for simplifying the finding of costs. It would be found that only about two-thirds of the staff would write out records of time. It would relieve the overseer of much detail work and give him time to look into the more important technical side of producing the work economically. Most of the forms were already in use, and only needed turning into another channel to do the work required of them in the Federation System. It had been ascertained that three minutes per docket was all that was required to deal with each day's work and the figures were invaluable. The system was simple, accurate, and scientific, it was pliable and flexible; it would fit any business. The introduction of a new machine or the creation of a new department could be contemplated with facility as a few hours' work would find the costs and help to determine the policy.

Mr. J. D. Wise's Address.

Mr. J. D. Wise (president of the South-West Association) then addressed the meeting on "What is the Costing System?" He introduced his subject by an amusing quotation from Dickens and likened the Costing System to the "Lamp of Lamps." Mr. Wise proceeded to explain in some detail the application of the Federation System, emphasising the need for its introduction and the simplicity of its working. He testified enthusiastically to the gain that had resulted from its application to his own business, and urged members to avail themselves of the services of Mr. Williamson and the other costing experts of the Federation who were readily available for installing the system.

The chairman (Mr. Sidders), the secretary (Mr. Bart), and Messrs. Langley, Wormald, Sidders, junr., and others took part in an interesting discussion which followed, and the meeting closed with the passing of a very cordial vote of thanks to Messrs. Hazell and Wise.

Spalding and Hodge, Ltd.

An interesting development is taking place in the paper trade inasmuch as Messrs. Spalding and Hodge, Ltd., Drury House, London, W.C., have obtained the controlling interest in H. O. Daniel, Ltd., the well known firm of wrapping paper merchants. Under this arrangement, the entire business has been removed to Drury House, and Mr. H. O. Daniel will have charge of this branch of the business. The name of H. O. Daniel, Ltd., will still be retained and all wrappings of every description will go through that particular branch. This development is a testimony to the progressive character of Messrs. Spalding and Hodge under the inspiration of their new general manager, Mr. C. McCann. It is no little achievement to have effected this important arrangement during the short time he has held his position.

PRODUCE, produce, if it be the merest iota of a production—produce it.—*Carlyle.*

Trade Notes.

AMONGST the week's receiving orders under the Bankruptcy Act, 1914, is one relating to D. C. Brain, lately carrying on business at 29, Newfoundland-street, Bristol, in co-partnership with E. Bowden and A. W. R. Seaton, as the Wholesale Paper and Paper Bag Co.

LONDON SCHOOL OF PRINTING.—Examinations will be held in Costing and Estimating at Stationers' Hall, on Monday, December 18th, 1922, at 6.30 p.m., for students who have been studying these subjects at the London School of Printing, Stamford-street, S.E.1. In the new term commencing on January 8th, 1923, classes will be formed for Costing, Estimating, Salesmanship, Offset Printing and Photo-Lithography. It is desirable that early application should be made for enrolment. There are only a few vacancies in certain of the classes.

THE Joint Industrial Council Organisation Committee met on Monday last and elected Mr. H. A. Bethell as chairman and Mr. R. Kneale as vice-chairman. Arrangements were made for a deputation to visit Lancashire and Cheshire next week, and inquiries are being made in other districts with a view to the formation of district committees.

THE inaugural meeting of the Scottish branch of the Joint Industrial Council is to be held in Glasgow to-day (Thursday), among those attending being the joint secretaries Mr. A. E. Holmes and Mr. A. E. Goodwin.

At the meeting of the L.S.C. Jobbing Guild on Wednesday, November 22nd, Mr. C. T. Jacobi gave an address on "The Ancient Customs of the Printing Trade." Mr. John D. Wise presided, supported by Mr. Geo. Eaton Hart and Mr. Bradley of the Morland Press. An interesting discussion followed.

THE editorial staff of the *Times* are to be entertained to dinner by the new proprietors on Saturday evening when it is understood an important announcement with regard to the future direction of that newspaper will be made.

A REPRESENTATIVE gathering of newsmen, which included the Right Hon. C. W. Bowerman, M.P. (for nineteen years a member of the staff of the *Daily Telegraph*), assembled at "Ye Old Dr. Butler's Head" Restaurant, Coleman-street, E.C., on Saturday evening, to celebrate their forty-sixth annual "social."

THE *Daily Telegraph* held an enjoyable staff dinner in the Strand Cabins Restaurant on Saturday night when, under the presidency of Captain C. W. Cole, circulation manager, the members of the circulation, publishing, motor, and works departments, assembled for their second annual re-union.

WITH its forty-five-page issue of November 9th the *Manitoba Free Press* of Winnipeg celebrates its fiftieth anniversary. A thirty-two page section with a coloured cover contains the interesting life story of this great Canadian newspaper.

THE members of the London *Daily News* and *Star Overseers' Guild* met at dinner at the Boulogne Restaurant, Soho, on Saturday evening, Mr. E. Stewart, president, in the chair.

THE staffs of the *Yorkshire Post* and the *Yorkshire Evening Post* have contributed a total of £56 16s. 3d. to the *Evening Post* Christmas Boots Fund for poor children. To the same fund Messrs. Chorley and Pickersgill, the Electric Press, have contributed £5 5s.

A NEW weekly devoted to Labour politics, Scottish nationalism, and Scottish arts and letters, under the title of the *New Scotsman*, similar in get-up to the *New Leader*, will shortly be edited and published by Mr. C. M. Grieve. The editorial offices for the present are at 16, Links-avenue, Montrose.

BAXTER colour print portraits of Mr. and Mrs. Charles Chubb on Friday fetched £700 in London, the bid being made by Mr. Etheridge of Birmingham.

At Bloomsbury County Court yesterday Mr. J. W. Robertson-Scott, of St. John's Wood, was given judgment, with costs, against Mr. Daniel O'Connor, publisher, in a claim for £52 10s. for articles contributed in the *Review of Reviews*.

MR. WINSTON CHURCHILL has been approached to write a series of weekly articles for a year at £200 an article, says the *Yorkshire Evening Post*.

THERE were two fatal accidents in the paper, printing, etc., group of trades during October.

ENDORSEMENT in principle of a paper industries' exposition, to be held at the time of the next annual convention of the American Paper and Pulp Association, was voted at a meeting of the Executive Committee of the Association.

JOHN McMULLAN ELLISON, aged 16, a cutter boy at the Ulverston Paper Works, after playing with other boys during the dinner hour, ran in the direction of the stock-room, where he apparently fell and broke his neck. He was found lying between two bales of paper. At the inquest last week a verdict of "Accidental Death" was returned.

THE death has occurred of Mr. George Waterston, aged 84, director of George Waterston and Sons, Ltd., stationers, Edinburgh and London.

MR. B. W. WEAVER, one of the oldest and best-known West Country journalists, died last Thursday at Bath, after a long illness. When a young man Mr. Weaver joined the reporting staff of the *Keene's Bath Journal*, and his association with that newspaper lasted for thirty-six years.

THE recent death of Mr. W. E. Newman, Southwick, is attributed to the effect of rigorous captivity as a prisoner of war in Germany. Although only 26 years of age, he held the responsible position of assistant manager to the Brentford Printing and Publishing Co., Ltd., which issues the *County of Middlesex Independent*.

MR. E. W. ROBINSON, of Leigh-on-Sea, Essex, and of 21, Camomile street, E.C., electrotyper and stereotyper, who left £7,332, gave his business to employees, Henry Ernest Fitzgibbons, Charles Ellis, and Charles S. Ellis, and the residue of his estate between the London and Middlesex Hospitals and the St. Dunston's Hostel.

THE late Dr. Ellis T. Powell (53), Brondesbury, N.W., formerly editor of the *Financial News*, left £5,023.

THE estate of the late Mr. Samuel Taverner, who for nearly 40 years was a compositor on the staff of the *Yorkshire Post*, has been valued at £1,100, with net personalty £437.

BLIND SOLDIERS AS 'PHONE OPERATORS.—The wonderful work accomplished by St. Dunstan's for the men of the Imperial Forces who lost their sight in the war is now universally known. It is St. Dunstan's proud boast that they have made "useful citizens again" of nearly 2,000 war-blinded men, and we gladly direct the attention of employers amongst our readers to the way in which very practical help can be given to St. Dunstan's work. Many of St. Dunstan's men have been specially and very thoroughly trained as telephone operators, and have filled positions all over the country in this capacity with a success which is vouched for by a number of letters from employers. Five or six of these men are waiting for positions at the present time, Manchester, Liverpool, Bristol and London being the areas in which it is at the moment desired to find positions for the men. The secretary of St. Dunstan's After-Care Organisation, at the Headquarters of St. Dunstan's Work, Regent's-park, N.W.1, will give every information to firms who may be able to engage a blinded soldier as telephone operator.

Trade Union Matters.

YORKSHIRE candidates at the recent Parliamentary election have been asked by local officials of the Typographical Association to express their views on the following resolution passed at the annual conference of the Yorkshire Group of the Branches of the Typographical Association: "That this conference emphatically protests against the action of the Government in continuing to count as income trade union and friendly society benefits for the purpose of depriving recipients of part or the whole of old-age pensions."

THE Executive Council of the Typographical Association have sanctioned the enforcement of a levy of 6d. per week on all fully employed members in the Cardiff Branch for the purpose of assisting unemployed members. The proposal had been approved by a ballot vote of the Cardiff Branch.

Federation Emblem: £5 Prize.

The Federation of Master Printers has been considering the possibility of devising an improved emblem for use on literature, etc., issued from headquarters, and which would also be at the service of members for use on their stationery.

Many of the devices used by the early master printers were of such a notable character that it is felt it ought not to be impossible to procure an emblem that would prove a link with the past as well as an ornament for to-day. A prize of £5 is therefore offered for the best design for the emblem, such accepted design to be the property of the Federation. The Committee of Selection reserve to themselves the right of withholding the prize if, in their opinion, none of the specimens sent in reaches the desired standard.

Designs should be addressed to the Secretary, Federation of Master Printers, 24, Holborn, E.C.1.

Industrial Welfare.

The Duke of York, as the Society's president, occupied the chair at the fourth annual meeting of the Industrial Welfare Society, held last week at the offices, Palace-street, Westminster.

In spite of trade depression the movement continues to expand, and it is significant that a knowledge of its value has spread to other lands. The annual report recorded that during the year either visitors or inquiries had come from Japan, Italy, Roumania, India, Belgium, and Czech-Slovakia.

Amongst the speakers was Sir William Waterlow, who referred to the excellent impression made upon the workpeople by the recent visit of the Duke of York to the works of Messrs. Waterlow and Sons. Sir William Waterlow related that after his Royal Highness's visit he had large copies of his photograph reproduced, and put up a notice informing his employees that all who applied could have a copy. "And," added Sir William, "it is a tribute to your popularity that everyone in the works has asked for a copy." (Cheers.)

ANOTHER BARKER CURE.—Sir H. A. Barker the famous manipulative surgeon, has achieved yet another remarkable cure. About the end of August Mr. M. Darwin, a *Daily News* machine manager, badly strained the cartilage of his right knee. The regular practitioners told him that the damaged part would have to be cut out. Mr. Darwin did not consent. After about seven weeks of excruciating pain he consulted Sir H. A. Barker. On reaching the surgeon's house Mr. Darwin could just manage to hobble with the aid of a stick. After ten minutes' treatment he walked three miles without a stop, and the cure, which was effected just over a month ago, is apparently a sound and permanent one.—*Daily News*.

GUILD OF
Press Correctors Literary & Pensions
SOCIETY.

"Is Type Too Small?"

At the 47th quarterly meeting of the Guild, held at the Clachan, Mitre-court, Temple, E.C., a paper with the title "Is Type too Small?" by Mr. W. F. A. Warbis, was read to the members. Following is a resume:—

It would not require the exercise of unique imagination to picture the horror of many costing clerks were a move made in the direction of enlarging the sizes of types, for at once quotations would rise on the score of the increase of paper quantities and the number of pages required to compass a printed work. But when due allowance is made for the probable decrease of orders owing to higher charges, it remains to be seen whether, even in that field, where cost is generally considered a ruling factor, the advantages would not considerably outweigh the drawbacks.

After all, though a printing press is a trade concern, and must, consequently, be expected to survive mainly upon an adequate number of profitable contracts, the craft itself is more than a mere medium for the making of money. What is good for the craft as an art must be decided upon merits more important than those of profit-and-loss accounts, though even in the latter sphere there are advantages to be derived from methods which at first glance would appear too costly.

The question of small type is one that must, sooner or later, engage the attention of the typographical specialist, for there is little doubt that it contains within itself the key to the riddle of modern eye-strain and permanent sight imperfection. It has always occurred to me as a paradox that a matrix maker, in cutting his die, uses a powerful magnifying glass to make his work very small, and immediately the type is printed the reader has perforce to wear spectacles to read it.

Who are the people most likely to be benefited by the use of larger type? Everybody. I imagine the customer smiling grimly and saying, "What about my printing bill?" As for the master printer, that which would dissuade the customer from buying print would naturally react unpleasantly upon himself, so that, at a superficial glance, my reasoning is out of court there. Of this I am certain: that the general reading public would benefit, and though its members might be obliged to pay higher prices for their books and periodicals, it is not without reason to suppose that what they lost upon this they would gain by saving in the direction of lotions and spectacles for weary eyes. Incidentally, although the fact is frequently overlooked, they are the people most to be considered.

But the objection based upon the extra cost of paper—will it really bear investigation? Here is a merchant who gives an order for a ten-thousand run of a booklet for advertising purposes. He will have his arguments set in very small type, to save cost of paper and imposing. The compositor naturally shows more turned letters on his proof. The patient corrector spends a little more time hunting for literals which would be obvious in a larger face. The work is cast and run off at full speed, with all its blurs and smudges ready for criticism at the other end. A trifling batter, or a mark which would disfigure but little a twelve or fourteen-point is annihilation and calamity to a type of six-point. Well, the work is sent out to the prospective customers, who, it may be assumed, are but little interested in the campaign. They read the first line or two, and, finding a difficulty in deciphering the blurred mass, they use it to light cigarettes. So that, by saving ten per cent. on the cost of paper, the advertiser loses the remaining ninety per cent. through his parsimony.

I have said that the general reading public is the most to be considered in this matter; but I have not forgotten that patient and long suffering person, the press corrector. Of what incalculable benefit would not larger type be to him also; for, even under the roughest of circumstances, this priest at the shrine of accuracy has to render very arduous, humble, and often thankless service!

A discussion followed, at the conclusion of which the following resolution was passed

unanimously:—"That the members of this Guild deplore the too frequent use of small type in newspapers and periodicals, and, in the interests of the public, in order to preserve the eyesight of the nation, urge that no type smaller than brevier shall be used, both in text and advertisements."

Trade Rulers and Vellum Binders.

L.M.P.A. Section Annual Meeting.

At the fourth annual meeting of members held last month, Mr. T. J. Hunt, the chairman, in reviewing the work of the past year, said he was glad to report a still further increase in their numbers, now amounting to 94. He congratulated them on their loyalty to the orders issued from 24, Holborn as to posting notices and in other ways.

Wages reductions were agreed in July to binders and rulers of 12s 6d. for men and 6s. for women, in four instalments. Two of these had already come into force; the two remaining ones are due in January and July next.

The slump in trade continued, with its attendant complaints of undercutting and snatching of work at any price. The Committee had done all they possibly could to stop this disastrous practice. When work is taken at cost, or even below cost, it is obvious that such a practice would have only one ending, and that is bankruptcy.

Following upon the wages reduction, the committee carefully considered what alterations in the price lists could be made, and by taking into account some of the reductions not then reached, recommended that the Ruling List be reduced 5 per cent. and the two Binding Lists 7½ per cent. These prices will be reconsidered by the committee at the end of the year.

The committee have had to consider restrictions by the union on women's work in certain branches, which have had the effect of stopping certain determined efforts proposed by members in order to compete with the German productions now being offered in the market. No assistance was given by the union in this direction; on the contrary, they took drastic steps to prevent women working on small jobs, with serious consequences to members.

The chairman, owing to recent ill-health, asked that a vice-chairman should be appointed to take his place whenever necessary, and Mr. H. R. Danford was duly elected.

Printing Works Accident.

At Salford, last week, A. Patterson, printer, Clarendon-road, Pendleton, was summoned under the Factory Acts for failing to guard dangerous machinery.

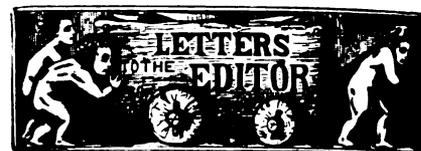

Mr. W. H. Seal, H.M. Factory Inspector, stated that when a boy named Bernard Harding was feeding envelopes in a platen machine on October 4th his fingers on the left hand were severely crushed by being caught between the fixed bed of the machine and the moving platen. There was no guard on the machine at the time. Although in this case the injury was not very serious, in other works there had been instances in which amputation was necessary. The defendant had been notified of the need for a guard.

Mr. Patterson said the boy was reading at the time of the accident, but this the lad denied. Originally the machine was fitted with guards, but apparently they had not been in position for a considerable period. Since the accident the necessary protective measures had been adopted.

In the absence of the defendant, the boy gave evidence in proof of the information. He admitted that earlier in the day he had been reading, but said he was not doing so when his hand was caught.

A fine of 40s. was imposed.

THE Christmas number of the *Sphere* is a real Christmassy number, with snow on the brilliantly-designed cover and a wealth of rich colour within. Mr. F. Matania contributes a beautiful plate entitled "Not Forgotten," which reflects the true Christmas spirit. There are pages of pictures in colour by the best artists of the day. Not only is the number rich pictorially, but it contains a complete and powerful story by A. S. M. Hutchinson, author of "If Winter Comes."

Bookbinders' Costing.

SIR,—Referring to the excellent article in the *British and Colonial Printer and Stationer* on "The Binders' Docket," there is a suggestion that the instruction given in technical classes is not on the right lines, that the tuition received does not fit the student for the work of a costing clerk, assuming, of course, that he has the necessary knowledge of the elements of clerical work. If this be so, is it the fault of those responsible for the teaching, or is it because there is a lack of co-operation between the Costing Committee, the employers and the technical schools? The latter is probably more correct.

The knowledge that befits a man for work as a costing clerk can be derived from the various classes, providing that it is known what that knowledge should be. It does not seem to be generally known what is expected from one who takes up this class of work; his duties would seem to be governed by the experience of the system possessed by those employing him.

At present the examinations in costing are those held by the Stationers' Company and the City and Guilds; the entrants for these examinations are students from technical schools, a fair percentage of whom pass either the first or second class. If the standard set by these authorities be not high enough for the employer, does it not suggest that either these examinations should be supplemented by a further examination or that the present examinations need revising and the standard raised to meet the requirements that exist?

The fact that those who enter for these examinations pass them satisfactorily proves that, at least, there is co-ordination of effort between the schools and the organisers of these tests; it now remains for that co-ordination to be carried further, and that employers and those responsible for the propaganda work of the Federation Costing System should formulate some scheme whereby it will be made possible for the schools to supply any demand that arises.

One other suggestion in the article was that a workers' handbook should be distributed. This is an excellent and most belated suggestion. It is reasonable to assume that the binders' docket would have been in use many months if the most elementary principles of the system had been explained simply to the workmen, rather than to their officials. If such things were pointed out to them as, for instance, that a time note does not necessarily mean a watchdog; that it is just as easy to know that a man is a slacker without the data which a time note supplies as with it; and to point out that not all above the man's wage charged per hour is profit, then we would be on the track towards gaining that goodwill and co-operation from the craftsman that is so necessary to the perfect working of a sound business method (and the costing system is such).

Finally, the length of time the system has been in use—1913-1922—suggests that most of those engaged in either working or teaching the system might safely be termed fledglings, and that the few old birds have not had time to lose their feathers. The number of firms using the system proves, at least, there are still a lot of birds unhatched, which means that the work of spreading the gospel must go on vigorously, and the best methods must be adopted to that end.

Yours, etc.
INTERESTED.

Lancs, November 24th, 1922.

"HOLLY LEAVES," the Christmas number of the *Illustrated Sporting and Dramatic News* is again one of the earliest and best of the season's issues. The coloured and photogravure illustrations are excellent and the fiction good. Accompanying the number is a special photogravure supplement, "The Sale of Old Dobbin," by John R. Reid.

DONSDALE NEWS-PRINT FOR AUSTRALIA.—The large Australian vessel "Dongarra," belonging to the Australian Commonwealth Government Line, left Aberdeen recently for Australia, via Hamburg, with a cargo of some 600 tons odd of paper from the Donsdale Paper Mills and a small general cargo. The paper is news-print for newspapers in Australia.

Government Contracts.

Contracts were placed with the following firms during October:—

Crown Agents.

PRINTING. — Messrs. Waterlow and Sons, Ltd., London, E.C.

PRINTING, RULING, BINDING, ETC.

3,500 Books, P. 1160; 3,430 Ledger Summaries.—McCorquodale and Co., Ltd., Wolverton.

40,000 Registry Jackets. — Willmott and Sons, Ltd., London, E.C.

25,000 Books, Mines and Quarries, Form 42.—Barclay and Fry, Ltd., London, S.E.

1,100 R.N.R. Certificate Books; 7,500 Books, S.71A; 20,000 Recorder Books, D.17A; 5,000 Books "S.1295"; 4,878 Duplicate Assessment Books; 400 Books D.395.—Waterlow and Sons, London, E.C.

350,000 Form U.I.3.—Pearce and Gardner, Ltd., Chorlton-cum-Hardy.

6,000,000 Telegram Forms, B. or C.—Midland Daily Tribune, Nuneaton.

Division I.—Northern Ireland Account Bookbinding, etc.—W. and S. Magowan, Newry.

1,500 Copies "Official History of the Great War," Surgery, Vol. II.—Nevett Bookbinding Co., Ltd., Hendon.

220,000 Form 412/A G.D.—McCorquodale and Co., Ltd., Newton-le Willows.

1,000,000 Books, No. 74A.—Harrison and Sons, Ltd., London, W.C.

170,000 Forms 18A.—Howard and Jones, Ltd., London, E.C.

320,000 File Jackets.—J. F. Warren, London, N.

Forms E.D.68A to T.—H.M.S.O. Press, Harrow.

BOOKS.—E. S. and A. Robinson, Ltd., Bristol.

PAPER.—J. Gordon and Co., Ltd., London, E.C.

War Office.

PAPER ARTICLES FOR TARGETS.—John McQueen and Son, Galashiels.

H.M. Stationery Office.

BAGS.—Smith and Young, London, E.C.; Millington and Sons, Ltd., London, N.

CARBONS.—Ellams Duplicator Co., Ltd., Bushey.

INLAND REVENUE "OFFICIAL PAID" ENVELOPES, SCOTLAND, CONTRACT FOR.—McCorquodale and Co., Ltd., Wolverton.

"E" ENVELOPES, CONTRACT FOR.—Smith and Young, London, E.C.

ENVELOPES.—Millington and Sons, Ltd., London, N.; J. Dickinson and Co., Ltd., Hemel Hempstead; Pirie, Appleton and Co., Ltd., London, E.C.

LOOSE-LEAF BINDERS.—Wm. Gibbons and Sons, Ltd., Wolverhampton.

PAPER OF VARIOUS DESCRIPTIONS.—W. Joynton and Son, St. Mary Cray; Darwen Paper Mill Co., Ltd., Darwen; S. C. and P. Harding, Ltd., London, S.E.; T. H. Saunders and Co., Ltd., High Wycombe; George Wilmot, Ltd., Shoreham; Portals, Ltd., Whitchurch; Wiggins, Teape and A. Pirie (Sales), Ltd., Dover, Wooburn Green, Devon Valley, Bucksburn, Hele; Hendon Paper Works Co., Ltd., Sunderland; Alex. Cowan and Sons, Ltd., Penicuik; Golden Valley Paper Mills, Bitton; Caldwells Paper Mill Co., Ltd., Inverkeithing; Northfleet Paper Mills, Ltd., Northfleet; Inveresk Paper Co. (1922), Ltd., Musselburgh; R. Sommerville and Co., Ltd., Creech St. Michael; R. Craig and Sons, Ltd., Airdrie and Caldercruix; London Paper Mills, Ltd., Dartford; Hartlepoons Paper Mill Co., Ltd., West Hartlepool; Brown, Stewart and Co., Ltd., Glasgow; Imperial Paper Mills, Gravesend; J. Cropper and Co., Ltd., Kendal; Fisher and Co., Ltd., Tamworth; James Baldwin and Sons, Ltd., King's Norton; Ramsbottom Paper Mill Co., Ltd., Ramsbottom; Guthrie, Craig, Peter and Co., Ltd., Brechin; Guard Bridge Paper Co., Ltd., Guard Bridge; Ford Paper Works, Ltd., Hylton; Olives Paper Mills Co., Ltd., Bury; R. Fletcher and Son, Ltd., Stoneclough, near Manchester; Sanitas Co., Ltd., London, E.; J. Dickinson and Co., Hemel Hempstead; C. Marsden and Sons, Ltd., Ramsbottom; Tullis, Russell and Co., Ltd., Rothes; Hill, Craig and Co., Balerno; Chas. Baker and Co., West Hartlepool.

PARALLEL PRESS, ALTERING.—Edwards and Williams, Ltd., London, E.C.

PORTFOLIOS.—T. Shackleton and Co., Manchester; Waterlow and Sons, Ltd., London, E.C.; Norton and Gregory, Ltd., London, S.W.

Representatives also in Australia, India, South
Africa, Canada, etc.

THURSDAY, NOVEMBER 30, 1922.

London Wages Crisis.

THERE seems good ground for hope, as we go to press, that the crisis in respect of wage-reduction in London may soon be safely passed. The Printing Machine Managers' Trade Society agreed, at a meeting on Tuesday evening, to accept the employers' proposals. In regard to the Paper Workers and the Correctors of the Press, there seems now no fear that the dispute will be allowed to take a critical turn. The attitude of the members of the National Society of Operative Printers and Assistants, however, appears to be less reasonable, though the executive are, we understand, still hopeful that an amicable settlement will be possible. Every consideration of reason and of policy should surely point away from recalcitrant action at this late juncture. The employers realise that with them it is now not a question of a mere few shillings off certain employees' wages, but a question of maintaining the integrity of their organisation, and they rightly insist that their final proposals must be carried through. Further resistance on the union side would, we feel, be unjustifiable on reasonable grounds and also prejudicial to the industry as a whole. This seems to be generally realised, and we hope that the many peacemakers on both sides may quickly succeed in bringing the long-drawn-out London wage struggle to a pacific end.

An Overdue Postal Reform.

We have previously drawn attention to the injustice done to British traders by the withdrawal of the samples post. Not only do the present regulations penalise the Britisher as compared with the foreigner, but, by seeking to claim as samples certain classes of printed matter, etc., which would not seem to deserve such classification, the Post Office is reaping a harvest of surcharges, and annoying both senders and recipients of such postal communications. We hear that the Federation of Master Printers, in taking up the question of the reinstatement of the samples post, have put before the postal

authorities a remarkable example of the senseless way in which the present samples regulations now hamper an extension of British trade. A leaflet was issued by a firm of specialists in loose-leaf productions, and because that leaflet had a few sample holes punched in it, the Post Office insisted upon its being regarded as a sample. On reference, however, to higher authorities at the General Post Office it was eventually agreed that such circulars should not be surcharged. The postal authorities, however, are not prepared to give an undertaking that some postmasters may not surcharge in individual cases. Surely it is high time the sample post was reintroduced so that such absurdities may no longer occur.

Price of Strawboards.

STRAWBOARD prices are keeping up very firmly, but appearances point to a possible fall in the near future unless something occurs to stimulate a demand. As it is, there has been a sudden falling off in orders and buyers have resumed their old condition of apathy. Box-makers report business to be very slow, an unusual state of affairs for them at this season of the year.

Kraft Paper Prices.

SPECIMENS of English-made kraft shown to the writer within the last few days reflect very clearly the progress that is being made in this branch of papermaking. We have advanced far in the perfecting of kraft manufacture since the days before the war. From all accounts the wrapping mills are much busier than they have been for a long time. English krafts are being quoted £27 per ton by the wrapping agents. Swedish kraft is quoted all sorts of prices according to whether it is handled by agent, merchant or dealer. And nowadays the finer distinctions in quality are being lost sight of. At one time there was a first and a second grade foreign kraft; but with a few exceptions kraft is now offered and sold simply as kraft, and the question of grade is left to the judgment or experience of the buyer.

Some Statistics.

FIGURES calculated from the Unemployment Insurance Acts show that in papermaking and staining the total number of unemployed on October 23rd was 4,419, of whom the major proportion, namely, 3,546, were males. The percentage of total unemployment was thus 7.2, a decrease of 0.3 compared with September 25th. The number of short time workers was put at 336, of whom the males again showed a preponderance, namely 267. The total percentage of 0.6 represented a decline of 0.1 in the month. With regard to manufactured stationery, the number of unemployed books remaining lodged on October 23rd was 4,000, of whom the majority were women, viz., 2,272. The percentage of total unemployment was 5.7, a decrease of 0.3 compared with September 25th. Short time workers were 187, of whom 136 were females. The total percentage of 0.3 showed no variation from the previous month. Under the heading of printing, publishing and bookbinding, total unemployment concerned 13,215 persons, made up of 9,918 males and 3,297 females. The percentage of 6.2 marked an increase of 0.4 in the month. There were 318 short time workers on this side of the industry, 192 being females and 125 males. The total percentage of 0.1 was a decrease of 0.1 in the month. Trade unions in the printing, bookbinding and paper group of trades, out of a reported membership of 94,683 at the end of October, returned 5,501 as being unemployed, a percentage of 5.8. The percentage figures represent a decrease of 0.5 compared with a month before, and a decrease of 2.7 in the year.

London Wages Position.

Wage Reduction Notices Widely Posted.

The London Master Printers' Association reports that, in respect of the few unions which have not yet accepted wage reductions, no less than 507 union and open houses have either posted notices or have made private arrangements with their hands to effect the reduction. A list of these firms may be seen at 24, Holborn by any members of the Association. 103 members, such as trade houses—litho or binding—have nothing whatever to do with the reductions on this occasion, and are not in any way affected. 160 are open houses and non-society, who may be depended upon to make the reduction, 150 members are small firms not on the 'phone, and it is difficult to find out what they are doing, and the balance of 170, making up the 1,150 total membership, includes some periodical houses, which have not posted notices, also houses not employing members of unions resisting the reductions. But practically all the larger jobbing firms are included in the 507, this being considerably in advance of any previous experience.

We are informed that since the above figures were issued the London Master Printers' Association has, within twenty-four hours, received information that 30 additional firms have posted notices.

It was announced last Thursday that the following resolution was adopted by the Weekly Newspaper and Periodical Printers at a committee meeting held on November 20th:

"That this meeting of the Weekly Newspaper and Periodical Printers Committee recommends all periodical printers in London to support those houses which have already posted notices of a wage reduction, by calling their workers together in the event of a ballot being decided upon, and explaining the position to them; making it clear that large concessions have already been made by the employers to secure an amicable settlement, and thus prevent business leaving London for good."

Hertfordshire Master Printers.

The Annual Dinner.

The fifth annual dinner of the Hertfordshire Master Printers' Association took place at the Holborn Restaurant on Thursday last.

Mr. F. Dangerfield presided, and in the course of his remarks said that their Association was one of the oldest bodies of master printers in the United Kingdom.

Mr. Albert Bennett, in proposing the toast of "The Association," referred to the historic connection of St. Albans with the early history of printing, and alluded to the excellent work which the Association had carried on.

Mr. D. Greenhill, in proposing the toast of "The Federation," referred to the splendid work which Mr. R. J. Lake, who hails from their area, had done for the industry, and said that the Federation had shown marked increase in strength and influence during the last few years. Mr. A. E. Goodwin replied and said that although the printing industry was not in a state of tranquility they were certainly in a better position than formerly to deal with many problems for the improvement of their craft. He expressed pleasure at the number of ladies present and referred to the interest which many of them took in the welfare of employees.

A very hearty reception was given to the toasts of "The Secretary" (Mr. Richardson) and "The Treasurer" (Mr. Gibb), and Mr. Peacock brought down the house when he proposed the toast of "The Chairman" (Mr. Dangerfield).

STATE OF TRADE.—The volume of work in the printing and bookbinding trades has been materially increased during the past month, says the Leicester Chamber of Commerce weekly trade report, mainly owing to the extra work entailed by the General Election. This, of course, will not be maintained, but business is gradually improving, and full time is being worked by nearly every firm, although in some cases the staffs are not yet up to the normal.

Personal.

SIR NEVILLE ARTHUR PEARSON has been admitted to the Freedom of the City of London as a member of the Stationers' Company.

MR. JAMES MACLEHOSE, LL.D., president of the Federation of Master Printers, 1921-22, is to be honoured by a complimentary dinner to be held at the Connaught Rooms, Great Queen-street, W.C.2, on January 8th.

AMONGST the present members of the Advisory Committee to the Department of Overseas Trade (Development and Intelligence) are Lord Riddell and Sir Herbert Morgan.

SIR ARTHUR SPURGEON will be retiring shortly from the post of managing director and general manager of Cassell's. He joined the firm in March, 1905.

MR. THOMAS YOUNG and Mr. Bain Irvine, who have been associated with Cassell and Co. for fifteen and fourteen years respectively, are assuming the control in succession to Sir Arthur Spurgeon. Mr. Young, who is at present visiting the Australian branch, becomes chairman on his return to England at the end of December, and Mr. Bain Irvine becomes managing director as from December 1st.

MR. NEWMAN FLOWER will continue as literary director, and Mr. Arthur Watson as director and head of the publishing department.

ALDERMAN H. W. KEAY, J.P., who is the president of the Booksellers' Association, has been seven times Mayor of Eastbourne. He was recently presented with the Freedom of the Town of Eastbourne.

MR. CHAS. T. JACOBI has accepted the invitation to join the committee appointed to deal with Classes 127 and 128 for Books and Bookbinding in connection with the British Empire Exhibition, 1924.

MR. T. E. NAYLOR, presiding over the ninth annual conference of the London Labour party at the South-place Institute on Saturday, claimed that the results of the General Election showed a great victory for the Labour Party. He evoked sympathetic laughter when, in referring to his own defeat, he said he consoled himself with the reflection that his position was now one "of greater freedom and less responsibility." He had fallen in good company and bad, but there was the general success of the movement as compensation.

MR. W. C. WARREN (general secretary, National Society of Electrotypers and Stereotypers) has, we are pleased to learn, completely recovered from his recent breakdown in health.

MR. FREDK. HEDGER, who is well known throughout the London printing trade, has accepted appointment as additional organiser to the London Master Printers' Association, and will commence his duties in that capacity on January 1st next.

MR. FRED JOHNSTON, London manager of the *Liverpool Post* for the past twenty years, who is retiring after a total service with that journal extending over 45 years, is to be entertained at a dinner at Frascati's Restaurant on December 15th by his colleagues and personal friends in Fleet-street.

MR. D. L. MONRO, formerly managing agent of the Calcutta General Printing Co., Ltd., Calcutta, has been appointed managing director of the Riverside Press, Ltd., Edinburgh.

MR. RALPH MICHAELIS, a London journalist, who set off from Ostend to walk to Constantinople, has cabled to a London friend from Kamgatch: "Have escaped from Turkish Irregulars into Constantinople."

MR. L. G. SLOAN, J.P., addressing the Worshipful Company of Stationers on Wed-

nesday, made a powerful appeal for Anglo-American unity. Out of his own experiences during a recent visit to the States, he said he could testify to the enthusiasm and sincerity of the great American people for closer cooperation with Britain.

CONGRATULATIONS to Mr. Frederic W. Goudy, the distinguished type designer, decorative artist and printer, who has been awarded the Allied Arts Gold Medal of the American Institute of Architects, for meritorious work in the art of typography and his devotion to its advancement.

MR. SHELDON LEICESTER has made a valuable contribution to the Technical Section Library of the Papermakers' Association in the form of E. Kirchner's "Das Papier." Vol. I. deals with the history of the paper industry, Vol. II. (which has not yet been received) with papermaking, and Vol. III. with pulp manufacture.

MR. SHELDON LEICESTER, by the way, is at present engaged on a text book on paper-making for the use of technical students, and it will shortly be ready for publication.

MR. H. J. GRISTWOOD, after 48 years of service with Messrs. James Spicer and Sons, Ltd. (during which time he has been manager of their Birmingham house for over 40 years), retired from the service of the company with the good wishes and best expressions of friendship on the part of all his late employers and colleagues. He has been engaged in the paper trade for 50 years.

Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

The usual monthly meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4. There was only a fair attendance of members, and in the unavoidable absence of the president (Mr. A. Chadwell), the chair was taken by Mr. J. Parker. Owing to there being little business before the meeting, the members engaged in a somewhat discursive—though useful—discussion on questions affecting the trade, in which, of course, many references were made to the great success that had attended the annual dinner held on the previous Saturday. The minutes of the October meeting having been read and confirmed, the secretary read a letter from Mr. J. R. Riddell congratulating the stewards and the committee of the Association on the excellent arrangements made at the annual dinner.

Mr. Parker said the members would regret to hear that Mr. W. C. Warren (general secretary, National Society) had been unwell as the result of a nervous breakdown.

Mr. Sharvell, sen., proposed that the secretary on behalf of the members send to Mr. Warren a letter wishing him a speedy recovery. Mr. Warren, he said, had been working very hard in raising money for the Festival List, and it was not surprising after all his efforts that he should require a rest. He (Mr. Sharvell) was sure he was voicing the feelings of every member of the electrotyping and stereotyping section of the trade throughout the country when he said they were all deeply indebted to Mr. Warren for the magnificent sum he had raised on behalf of the Printers' Pension Corporation.

The proposition was heartily agreed to, and several members added their testimony to the splendid services rendered by Mr. Warren on behalf of the trade.

Mr. Parker thought the meeting should not close without passing a vote of thanks to the stewards and the secretary for the efficient way in which the arrangements for the annual dinner had been carried out.

This was seconded by Mr. Sharvell and agreed to.

Messrs. W. M. Forsyth and J. Mason, who replied on behalf of the stewards, expressed gratitude to Mr. Bullett for his assistance in making the function so successful.

The chairman said he hoped to see as many present as possible at the Auxiliary Concert at Anderton's Hotel on December 4th, at which Mr. W. J. Light had kindly offered to preside.

A vote of thanks to the chairman brought the meeting to a close.

DIVIDENDS AND REPORTS.

WIGHTMAN AND Co., LTD. (104, Regency-street, S.W.1).—This company's report and balance sheet for the year ending September 30th, 1922, shows that the profit earned is £8,097. A dividend of 12½ per cent. has been paid, and from the balance at credit of profit and loss £6,000 has been transferred to reserve, £12,018 forward. A sum of £976 has been divided among the profit-sharing employees.

NEW PEGAMOID.—Net profit for the year, after providing for taxation £3,237, which, with £5,000 transferred from the contingency account, reduces the debit balance of the previous year to £39,818.

ILFORD, LTD.—Net profit for past year £52,235. Dividend of 8 per cent.; £4,000 to reserve; £10,000 written off goodwill; 8,316 forward.

DARWEN PAPER MILL Co., LTD.—The amounts for the half-year ended October 28th last show a profit of £9,151 15s. 6d. Dividends of 1s. on the ordinary shares and 6d. on the preference shares, equal in each case to 10 per cent. per annum, free of income tax, have been declared.

STAR PAPER MILL Co. (1920).—Report for the year ended October 31st says the period under review has been very difficult, owing to the abnormal conditions prevailing. The profits, after allowing for depreciation, etc., amount to £27,218, which, added to the amount brought forward and after deducting interim dividend paid in May last, leaves a disposable balance of £27,663. Final dividend of 6d. per share, less tax, absorbing £9,375, leaving £18,288 to be carried forward.

NEW COMPANIES.

ANGLO AND OVERSEAS PRESS, AGENCY, LTD.—Capital £100; press agents, etc. Private company. Directors: E. Brooks and F. V. Conolly.

EDWARD J. WOOD AND Co. (PRINTERS), LTD.—Capital £5,000; wholesale and retail printers, stationers, law stationers, book-sellers, lithographers, engravers, die sinkers, envelope and cardboard box manufacturers, paper bag makers, etc. Private company. Permanent directors: E. J. Wood, A. Ritchings and A. G. Bonny. Registered office: 19, Baldwin-gardens, Grays Inn-road, W.C.

FELIX BRITAIN AND Co., LTD.—Capital £10,000; to acquire the business of publishers and advertising contractors carried on by F. Britain and P. Pitman at 45, Chorlton-street, Manchester, as "Felix Britain and Co.," and

particularly to acquire all the rights and interests of them, or either of them, in an intended publication entitled "Brittain's International Register of Trade Marks." Private company. Permanent directors: F. Brittain and P. Pitman. Registered office: 45, Chorlton-street, Manchester.

A. W. LESLIE AND Co., LTD.—Capital £500; to take over the business of a wholesale paper merchant, printer, manufacturing stationer and carrier-bag manufacturer, carried on by Jessie K. Leslie at Cathedral House, 8, Paternoster-row, E.C., as "A. W. Leslie." Private company. First directors: A. W. Leslie, Jessie K. Leslie and J. W. Chessum. Registered office: Cathedral House, 8, Paternoster-row, E.C.4.

E.M.B.A., LTD.—Capital £500; agents for the collection and circulation of enquiries for engineering machinery, materials and supplies from and to buyers and manufacturers of such goods; also printers, publishers, advertising agents, etc. Private company. First directors: C. C. Macbride, D. B. Macbride and J. Patrick. Registered office: 17, Queen Victoria-street, E.C.4.

ABERDEEN NEWSPAPERS, LTD.—Nominal capital £200,000; to purchase the business of newspaper printing and publishing, carried on by the Aberdeen and North of Scotland Newspaper and Printing Co., Ltd., and to carry on business as general publishers, etc. First directors: H. Alexander, W. M. Alexander, R. Bruce, Lieut-Col. D. F. Davidson, G. A. Duff, Col. J. W. Gordon, Capt. R. J. Nicol, A. B. Nicholson, J. Agston, J. H. F. Undy, R. W. Walker, E. W. Watt, and R. M. Williamson. Registered office: 20, Broad-street, Aberdeen.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

W. SPEIGHT AND SONS, LTD. (printers, stationers, etc.).—Mortgage, dated November 14th, 1922, to secure £1,300; charged on a moiety of freehold land and buildings Nos. 98 and 99, Fetter-lane, E.C. Holder: E. W. Carter, 98 and 99, Fetter-lane, E.C.

L. UPCOTT GILL AND SON, LTD.—Issue on November 13th, 1922, of £3,000 debentures, part of a series already registered.

FREDERICK WARNE AND Co., LTD. (publishers, etc.).—Mortgage and land registry charge on 1-4, Bedford-court and 15, Bedford-street, W.C., both dated November 15th, 1922, to secure £3,250 (ranking in priority to first and second debentures series A and B). Holders: W. W. Rashleigh, 63, Lincoln's Inn Fields, W.C., Sir Colman B. W. Rashleigh, Bart., Prideaux, St. Blanzey, Cornwall, and J. B. Roshier, 63, Lincoln's Inn Fields, W.C.

W. S. AND M. AUSTIN, LTD.—(a) Satisfaction in full on November 8th, of debentures dated April 11th, 1922, securing £200; and (b) debenture dated November 9th, 1922, to secure £700, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: T. Shillitoe, 3, Electric-parade, Seven Sisters-road, N.

FIELD, SONS AND Co., LTD. (printers, manufacturing stationers, box-makers, etc.).—(a) Satisfaction in full on November 3rd, 1922, of mortgages dated June 20th, 1918, and July, 5th, 1920, securing £4,000 and £1,500 respectively, and (b) registered mortgage dated November 10th, 1922, to secure £5,000, charged on certain lands and premises in Bradford. Holder: T. J. Hayes, 5, Nab-lane, Shipley.

ART TRADE PRESS LTD., (London).—(a) Satisfaction to the extent of £150 on November 14th, 1922, of debenture dated December 14th, 1910, securing £250; and (b) particulars filed of £400 debentures authorised November

14th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

TUDOR PRESS, LTD. (London).—Particulars filed of £2,500 debentures authorised November 6th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the amount of the present issue being £2,000.

LOCOMOTIVE NEWS AGENCY.—Charge on certain revenue and moneys, dated November 10th, 1922, to secure £214 16s. 5d., and further advances. Holders: Barclay's Bank.

BANKRUPTCIES, etc.

RE ROBERT LESLIE WISE AND JAMES GEORGE MARSDEN (trading as The Perfect Manufacturing Co.), wholesale manufacturing stationers, bookbinders and pattern card makers, 10, New Union-street, E.C. These debtors failed in December, 1921, and lodged accounts showing liabilities £951 against assets valued at £10. The sitting for public examination had stood adjourned on several occasions, and was concluded on November 8th before Mr. Registrar Mellor. The debtors commenced business in June, 1915, and traded until November, 1921, when they sold the goodwill and plant, the landlord having distrained for his rent and sold the stock and effects. Pressure by creditors followed and the debtors then filed their petition. The failure was attributed to depression in trade and heavy overhead charges.

French Paper Companies

SOCIETE DES PAPETERIES BERNARD GILBERT.—Recently formed with a capital of 2,600,000 francs; this company is to manufacture and trade in paper, envelopes, etc. The company has a mill at Bourget-du-Lac (Savoie).

PAPETERIES DELCROIX.—According to the report business has improved during the last few months and demand is more regular. The stumbling block is the scarcity of workmen, due to the adoption of the eight hours' day before it was possible to train qualified workers. The net profits for the year represent 3,764,092 frs.

LIBRAIRIE HACHETTE.—After deducting 2,874,616 francs for expenses, the net profits for 1921-22 amounted to 6,310,357 francs, against 4,926,798 for the previous year.

SOC. FRANCAISE DES PAPIERS PRINTS.—Roughly profits for 1922 were 2,705,300 francs, against 2,480,608 the previous year.

PAPETERIES DE LIMOUSIN.—This company has been amalgamated with Labrousse Frères and Cie.

PAPETERIES DE ROBERTEAU.—Dividend of 9 per cent. will be proposed for 1922, against 8 per cent. last year.

In a new Austrian process, paper is used for a variety of such articles as buttons and hat ornaments. The material is first impregnated with gelatine or varnish, and then treated in a hardening bath of formaldehyde. The article may be shaped and then treated, or stamped out after treatment.

Pulp and Paper Films at Battersea.

Interesting Evening at the Polytechnic.

The papermaking classes at the Battersea Polytechnic are being conducted and developed with praiseworthy enterprise. Every effort is being made to interest students in the courses provided, and to enlarge the scope of the technical training. The aim is to extend education among paper mill employees and others in the South of England, and in this direction the Battersea Polytechnic is doing very excellent work. In every way the authorities are endeavouring to provide for the practical requirements of the industry. For instance, a good deal of additional plant on the chemical and engineering sides of papermaking has been installed, and the successes at the last City and Guilds of London Institute examinations bear witness to the interest which is being aroused and to the higher qualifications being reached.

On the 20th inst. further evidence of the progressive spirit at Battersea was shown when the art and practice of papermaking was demonstrated on the screen. The first film was that of the Prince of Wales at the Hele Paper Mill, Devon, kindly lent by Messrs. Wiggins, Teape and Co., Ltd. The second film illustrated pulp and paper manufacture in Sweden, and was shown by the courtesy of Messrs. Boving and Co. Both these films have been shown before, and, given together, as they were at Battersea last week, they afforded a very excellent insight into the methods of paper manufacture in England and of papermaking and pulp manufacture in Sweden. Such was the interest in the display that something like 250 people attended, and evinced the greatest appreciation in the display.

Major Renold Marx, who has charge of the engineering side of the papermaking courses, introduced the films with an interesting address. He pointed out that paper was such a familiar article of everyday use and it entered so deeply into the lives of the people, that it was taken very much for granted and no inquiries were made as to whence it came. He went on to emphasise the advantage of realising the importance of paper. He asked, for instance, what would happen if the supply of paper was suddenly stopped and papermakers were exterminated. In such an event, civilisation and progress would come to a standstill. In support of this view, Major Marx stated that the average production of paper in the world per day was something like 45,000 tons, half of which was news-print. The value of this enormous output was something like £1,000,000. The highest consumption per head of population was in the United States, and this consumption increased from 93 lbs. in 1902 to 138 lbs. in 1920, something approaching 50 per cent. increase in 11 years. The consumption of paper in this country was considerably below the United States figure, being estimated at about 25 per cent. less. The reason for the larger consumption across the Atlantic was the greater number of uses to which paper was put, such as the wrapping of bread and foodstuffs in properly prepared paper, the manufacture of paper towels and drinking utensils, and so on. When people realised the hygienic value of paper in these directions, Major Marx thought this country would follow the example of the United States.

MR. FRANK LLOYD and the *News of the World* (per Lord Riddell and Mr. E. Fifoot) contributed each £100 to the Sir William Treloar "birthday tribute" which is to be placed to the credit of the Cripples Hospital and College at Alton.

MESSRS. BACKHOUSE AND COPPOCK, LTD., have issued a series of very attractive advertisements in connection with their various papers and boards. Unique colour devices are adopted, and their colour surface papers are particularly arresting by reason of the novelty of the designs and the effectiveness of the arrangement. The rainbow and sunset effects are most striking, while the cover for the plain, calf and leather papers has secured special approbation. A novel arrangement has also been adopted for the Queen cover papers in various shades. Drawing attention to the Bacop enamelled coated box boards, the series includes a box board which can be folded up into a box and made to emit tobacco smoke rings, quite a clever and amusing arrangement.

Attractive Blottings.

Mr. John E. Moss, papermakers' agent and export shipper, of 22, Ivy-lane, Newgate-street, London, E.C.4, issues a stock list covering a wide range of papers at prices which are highly attractive. These papers are stocked in London ready for the trade, Mr. Moss carrying on exclusively a paper agent's business.

With increased trade in prospect, there should be an accentuated demand for the papers which Mr. Moss handles, especially the two lines of blottings, of which he makes a speciality. The "Champion" blotting, for instance, gives a high test for absorbency, better, in fact, than many pure rag papers sold at a much higher price. The No. 188 mill pure rag blotting is another line which ranks high for colour, finish and quality. The trade prices speak for themselves, while to wholesalers specially liberal terms are quoted. As a consequence, the satisfaction given to users and the exceptional profit yielded to the trade, have resulted in steady repeats. Export buyers should note that both papers are handsomely watermarked with an imposing design, which includes the words "Made in England," a legend of value in the case of Dominion tariffs.

A recent acquisition to the staff of Mr. Moss is Mr. Austen Thorburn (late of Messrs. L. S. Dixon and Co., Ltd.), who was at one time connected with the London office of the North of Ireland Paper Co., and who is well known in the trade.

It is calculated that the average output of paper in Scotland is about 60 per cent. of the pre-war quantity, a very considerable part being for export.

Kenya Duties on Paper, &c.

The new Customs Tariff assented to by the Governor of Kenya contains the following items:—

Cards, playing, import duty, 70 cents.
 Paper, cigarette, 30 per cent. *ad valorem*.
 Paper: All paper including tissue paper in its original mill ream wrapper not less than 16 ins. x 15 ins., when imported in the flat, and paper in reels, not less than 9 ins. wide, but not including feint or ruled paper, stationery, sensitised, tracing or carbon paper, blotting, wall, wrapping or sanitary paper, 10 per cent. *ad valorem*.

Printing, lithographic and rolling inks roller composition and stamping colours, 10 per cent. *ad valorem*.

The following items are duty free:—
 Printed matter, namely, newspapers (other than newspapers imported for packing purposes), periodicals, literature, fashion plates, pamphlets, music other than roll music, trade catalogues, price lists, show cards, photographs not elsewhere enumerated, and all printed or lithographed matter used or intended to be used solely for advertising purposes.

Printers' type and printers' bronze.
 Machinery, apparatus, appliances and instruments for printing purposes.

MESSRS W. TURNER AND CO., LTD, paper agents, 159, Commercial-street, London, E.1, have been appointed sole agents in the United Kingdom and Ireland for Nilsen and Co., Aktiebolag, of Stockholm, whose specialities cover writings, printings, wall-papers, sulphites, krafts, natures, etc.

Australian Notes.

Year's Overseas Trade—Big Drop in Values—Norway's Contribution—Demand for Wall-paper—Australasian Paper Company's Big Profit—Cumberland Board Mills' Loss—Increased Newspaper Circulation—Should School Books be Free?—New Companies and Share Issue—Big Paper Fire.

(From Our Sydney Correspondent.)

OFFICIAL statistics of imports reveal the great falling off that has taken place in paper consumption during the twelve months ended June last. In that period the value of paper entering the Commonwealth was £4,841,062, which compares with £8,956,147 in the year 1920-21. Of course, the fall in value does not correctly represent the decline in consumption, since allowance has to be made for the lower prices.

A REPORT recently prepared by the Intelligence Bureau of Norway indicates the hold which Norwegian paper has upon the Australian market, and the following paragraph may be quoted: "The varieties of Norwegian paper which have specially won a market in Australia are mechanical wood pulp, wood-free printing paper, writing paper, news on rollers, packing paper and glazed printing paper. The Norwegian fir gives excellent raw material for the manufacture of paper, having stronger, longer and finer fibres than the trees of other paper-producing countries. Therefore, Norwegian paper, and especially Norwegian news paper and kraft paper, have won renown for their good quality wherever they have been sold."

ATTENTION has recently been called to the incidence of the demand for wall-paper in Australia. This demand is constant, owing to the fact that there is little or no production of this class of paper in the Commonwealth. Discussing the subject, the Canadian Trade Commissioner (Mr. H. D. Rose) mentions that wall-paper is chiefly imported by paint and oil dealers as a necessary adjunct to their business, but departmental stores, artistic furnishing houses, hardware merchants and other traders often stock wall-paper as a departmental feature of their business. He goes on to say that expert opinion assumes, approximately, that Australian requirements of wall-paper are in the following proportions—50 p.c. in cheap lines, 30 to 35 p.c. in medium and 15 to 20 p.c. in high grade. The share of the United Kingdom in this market is particularly good. Of a total importation of wall-paper into Australia in 1920-21, valued at £165,609, British manufacturers supplied material to the value of no less than £118,201, supplies from Canada totalling £37,302.

VICTORIA is the largest purchasing State, receiving in 1920-21 wall-paper to the value of £90,770, followed by New South Wales with £34,974, and South Australia with £24,239. It should be mentioned, however, that the above figures are rather abnormal, owing to a temporary shortage in stocks held, combined with the higher costs ruling in 1920-21. A comparison of Australian duties on wall-paper shows that British makers enjoy a preference of 11 p.c. net in the Commonwealth tariff over Canadian manufacturers. Exclusive of regular lines of wall-paper, there is a demand for special quality, tiled pattern, varnished paper for bath-rooms and lavatories, which, on account of its body and special preparation, constitutes a higher invoiced value.

THE report of the Australasian Paper and Pulp Co., Ltd., which has a paid up capital of £746,500 in £1 shares, shows a net profit for the year ending June 30th last of £69,420, compared with £70,939 in the previous year. A balance of £808 forward placed £70,228 at the disposal of the directors. This has been dealt with by a 4 per cent. interim dividend in February, absorbing £29,860, a further 4 per cent. for the half-year ended June 30th, absorbing £29,860, and allocation of £10,000 to depreciation reserve. It is noted that the company contracted liabilities running into £100,000, against which, it is added, there does not appear more than a fractional offset.

THE company has mills at Geelong, Sydney, Fairfield, Broadford, Abbotsford, Adelaide, Fyansford, and Melbourne. The directors' report states that, with the exception of a short break at the Geelong mill, all the others have been running steadily. Extensive additions to the Sydney and Fairfield mills are contemplated, and 100,000 preference shares carrying 8 per cent. interest will be issued to provide necessary additional capital.

A NET loss of £7,276, disclosed by the balance-sheet for 1921-22, of the Cumberland Board Paper Mills, Ltd., is attributed by the directors mainly to depreciation in value, and the writing down of large stocks carried at the close of the previous financial year, "plus the payment of an unprovided for amount of taxation." Had it not been for those adverse factors (which will probably never happen again), the operations of the company would have resulted in a very substantial profit. All stocks have now been set upon a replacement basis of values. Naturally in the circumstances the board make no recommendations for appropriations.

THE financial outcome, as revealed in the accounts, was not altogether unexpected, for earlier in the year it was found necessary to omit the interim dividend. That course was made unavoidable, as the board explained in a circular to shareholders, principally by the writing down of imported raw material and manufactured goods to the present-day figures. The clearing-up process having been carried out thoroughly, the financial position is the more healthy. Liabilities include sundry creditors, etc., £8,193, and £66,662 due to bank. Freehold, etc., are valued at £95,582, plant and machinery at £189,153, and stock at £57,390. Sundry debtors appear for £16,634, and investments for £5,132. Gross earnings amounted to £13,044, and there were, in addition, sundry receipts of £751.

OFFICIAL figures show that the circulation of the *Sydney Daily Sun* is steadily rising. Certified sales for the week ended August 6th last reached 180,287, as against the previous highest figure in July of 181,461.

A DISCUSSION is proceeding in the Melbourne press as to whether school books should be distributed free. It is pointed out that the cost of these books falls very heavily upon many parents. Accordingly, in the Legislative Assembly Mr. Ryan moved a resolution that all school materials used by the scholars in the Victoria Education Department should be provided by the Department free of cost to the scholars. Mr. Ryan pointed out that people in poor circumstances had cause absolutely to dread the success of their children in the schools because it meant that they came home with bills for school books to the extent of £5, £6 or £7. The Minister of Education, who described the motion as far-reaching, moved the adjournment of the debate, and this was carried.

AMONG the new companies registered is the Chinese Masonic Newspaper Co., Ltd., with a capital of £5,000. Objects: To establish and print a newspaper or newspapers in Sydney and other places in New South Wales, and to carry on business as proprietors and publishers of newspapers and other publications. The subscribers are Chinamen.

DAMAGE to the extent of thousands of pounds was caused recently by a fire which broke out at the premises of Messrs. R. R. Woolcott and Co., paper merchants and importers, at Melbourne, a building of four storeys. The fire started on the top floor, where large stocks of paper were stored. The highly inflammable character of the stock handicapped the firemen, but they succeeded in confining the fire to the two top storeys. Of course, considerable unavoidable damage was done by water on the lower floors.

In sending out samples of commercial stationery and envelopes Spicers, Ltd., include a large paper bag on which is printed the price list and diagrams of various sizes of bag-shaped envelopes which should be very useful. The specimens of papers and boards are also of the utility order. Special attention is drawn to the services of the well-equipped account book department.

Sequel to East Dorset Election.

Relief Granted Following an Inadvertence.

During the candidature of Mr. Ralph Hall Caine, Independent Conservative for East Dorset, election streamers bearing the words "Vote for Hall Caine" were suspended from the Poole Conservative Club to a building opposite. This, it is stated, is a contravention of the Corrupt and Illegal Practices Prevention Act, 1883. Mr. Ralph Hall Caine, M.P., his agent and sub-agent, accordingly made application last week in the High Court, King's Bench Division, that the streamers may be made an exception to the provisions of the Act, on the ground of inadvertence.

Mr. Justice Sankey, sitting as election petition judge, said he did not want to prejudice or lay down a rule that would mean that in other cases relief must be given; but, in looking at the whole of the facts in the present case: (1) The fact that the election was conducted on perfectly proper and pure lines; (2) The fact that all these gentlemen acted in perfectly good faith; (3) The fact that there were very few of these banners ordered, and only three were put up; and (4) The fact that as soon as the attention of these gentlemen was called to what they were advised might be illegal they at once took steps to put matters right, his lordship had come to the conclusion that this was a case where the Court ought to grant the relief sought. He would, therefore, so order, and would grant the relief applied for.

Wansbrough Paper Co., Ltd.

An attractive sample wallet has been sent to the wholesale stationers of the United Kingdom by the Wansbrough Paper Co., Ltd., Watchet, Somerset, whose London office is at 4, St. Paul's-churchyard, E.C.4 (Messrs. Reed and Smith). The arrangement affords excellent access to the comprehensive range of wrappings. The pockets of the wallet are cut to expose the samples and to render them readily accessible, while a tab index is attached to each of the twelve compartments, covering krafts, browns, Royal hands, M.G. envelope and bag papers, M.G. chrome poster, etc. Full particulars are legibly printed on each sample. The quality of the Wansbrough wrapping stands high, and the examples forwarded in such a handy form bear comparison with rival makes abroad. Particularly good are the kraft papers which are in so much demand. Extensive stocks are held in all the required sizes and weight, both M.G. and unglazed of the best and second grade. A special feature is made of tinting these papers to the requirements of customers, and what is of at least equal importance is the fact that the prices, as shown in the list accompanying the wallet, compare favourably with those of foreign mills. Moreover, quick delivery adds to the advantage of the service which the Somerset mill can give. It is a pleasure to note this enterprise on the part of British papermakers.

Higher Canadian Paper Prices.

Prices are strengthening on all grades of pulp and paper in Canada, and increases are recorded in certain lines. Dominion mills are taking orders for news-print at \$75 for delivery in the first half of 1923. The largest American manufacturer has been quoting this price for several months. Book paper prices have also advanced, and others are sure to follow. Higher prices are in force for both chemical and mechanical pulps.

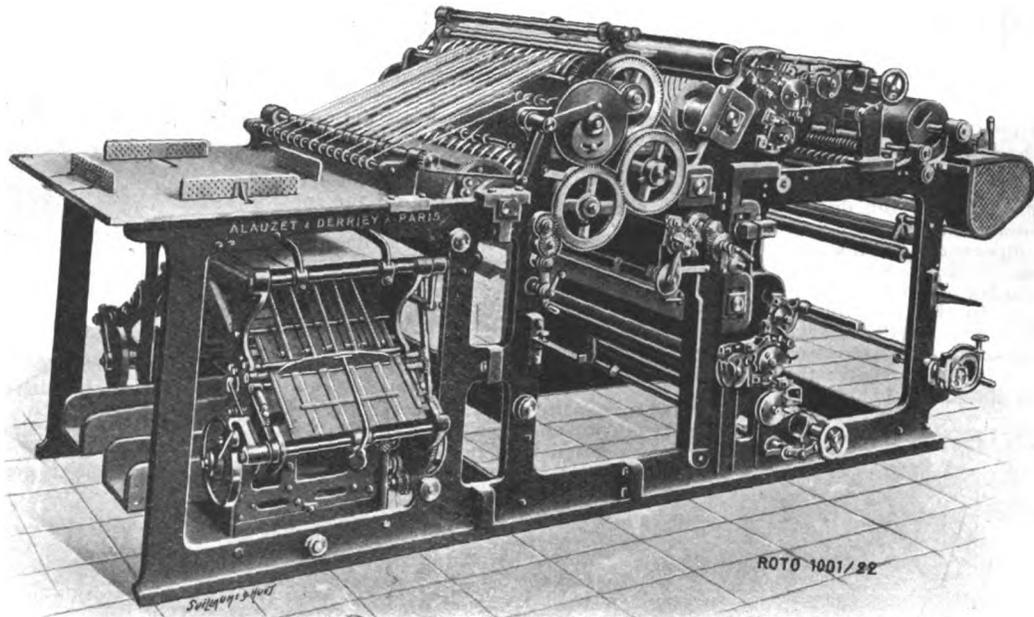

MESSRS. A. M. PEBBLES AND SON, LTD., report a good and increasing demand for their high-grade chromo, enamel, litho varnishing papers and other qualities. With thoroughly modern plant they are turning out qualities better even than those which earned them a reputation for reliability in pre-war days. Users of litho chromos, boards and kindred papers would do well to obtain samples and full particulars from Messrs. Peebles, 151, Queen Victoria-street, and 237, Upper Thames-street, E.C.4.

ALAUZET & DERRIEY, Réunis.

Materiel d'Imprimerie & Machines Outils (S.A.)

Main Office - - - 81, Av. Philippe Auguste, PARIS.

WRITE TO-DAY FOR FULL INFORMATION ABOUT OUR PERFECT ALL-SIZE ROTARY PRESS.

ALL - SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

New Inventions.

Intaglio and Offset Combination.

Mr. T. R. Johnston, of Tokyo, Japan, whose inventions in printing machinery are well known, has patented an apparatus whereby webs of fabric are printed on one or both sides with a continuous design by means of intagliated copper cylinders, or by thin intagliated plates secured to cylinders, co-operating with rubber offset cylinders of a diameter equal to or an exact multiple of that of the design cylinder. The offset cylinders press the web against a separate impression cylinder or against a second offset cylinder when two sides of the fabric are being printed at once, as is shown in Fig. 1. In this machine, a design in three colours is printed on each side of the web g^1 by means of rubber-covered offset cylinders d^1, d^2, d^3 which receive the designs from copper cylinders a^1, b^1, c^1 , and

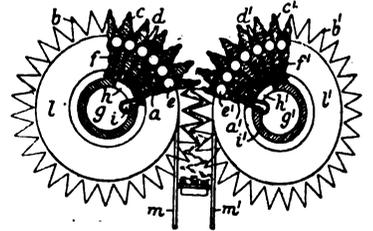

a^2, b^2, c^2 , having the designs engraved in intaglio and provided with ink rollers $e^1 \dots e^5$ and scrapers $f^1 \dots f^5$. The designs in the cylinders a^1, b^1, c^1 are the reverse of those in the cylinders a^2, b^2, c^2 , and the designs printed are continuous. In a modification, the offset cylinders d^1, d^2, d^3 print in co-action with a large impression cylinder, and the web is then led to a second large impression cylinder with which offset cylinders such as d^2, d^4, d^6 co-act, electrical or other drying means being used for the impressions. In another modification, Fig. 3, engraved plates which may be reproduced by three-colour processes, or by the aid of lithography, are secured to cylinders $a^1, b^1, c^1, a^2, b^2, c^2$, and the gaps between the plates filled in as described in Specification 117,888. These cylinders print on offset cylinders $d^1 \dots d^6$, two cylinders being required for each colour. The offset cylinders for each colour may receive a design of exactly half its circumference, so that the two offset cylinders of each colour print a complete continuous design between them, or these partial designs may overlap each other. In a further modification especially adapted for printing table cloths, flags, etc., offset cylinders as d^1, d^2, d^3 may print designs in one or more colours with an imprinted interval between the designs. In some cases the web is wound up after being printed on one side, and the other side of the web is printed in the same machine by changing the printing rollers and printing on the plain side of the wound web by a separate operation.

Improvements in Printing Machines.

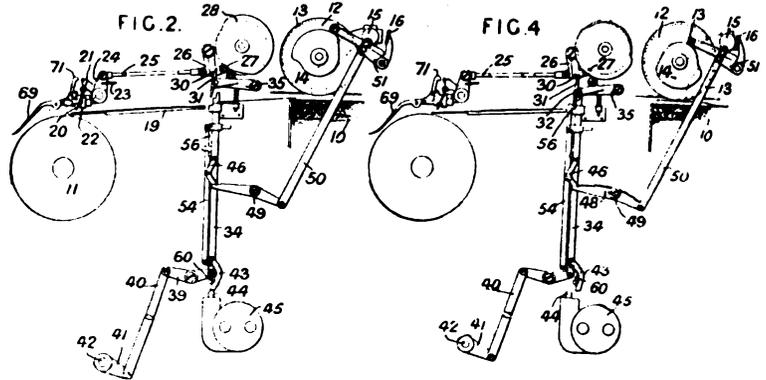

In an invention by the American Type Founders Co. a printing machine is fitted with means for controlling the sheet feed

mechanism, the stopping of the press, and the throwing on and off of the impression, and the controlling mechanism is arranged so that the machine can be converted from one dealing with a sheet at every rotation to one dealing with sheets at alternate or periodic rotations, so that double rolling occurs. The machine is fitted with a detector which, if a sheet is not fed or if a crumpled sheet is fed, acts to cut off the feed and throw off the impression, and also stop the press. When the machine prints alternate sheets, a detector acts to cut off the feed and trip the impression for each alternate rotation of the machine. As shown in Fig. 2, the sheets are fed from a pile 10 by a suction nozzle 14 in communication with a suction pipe 15 and by a pair of rotating wheels 12 with suction nozzles 13. The suction in pipe 15 is relieved at the desired time by a cam operated valve 16, and this valve may be opened by means controlled by detectors when it is desired to stop the feed. The sheets pass over a feed board 19 to

in the spaces until the interfolding takes place, whereupon the openings communicate with a compressed air supply to assist the usual friction brushes bearing on intermediate plain parts of the drums in detaching the

interfolded sheets therefrom. The drums a, a' , formed with teeth b, b' , rotate on hollow stationary suction cylinders g, g' , and perforations d, d' , and passages e, e' and f, f' leading from the spaces between the teeth are placed

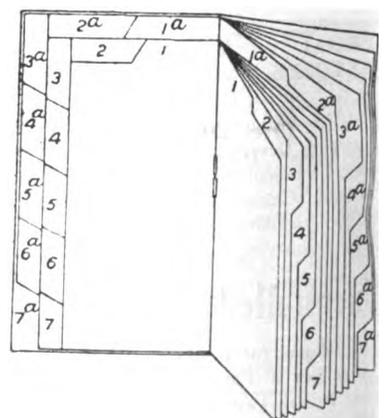

a cylinder 11, and pass under a detector 20 which is swung to the left by the sheet, about its pivot 21, and permits a shoulder 22 on a lever 24 to move with the lever in a clockwise direction under the action of a spring 23. This movement is permitted by a cam 28 engaged by a roller 27 on a lever 26 connected by a link 25 to lever 24. A pin 30 on lever 26 thereby controls a dog 31 on an oscillating lever 35, and the dog 31 is moved clear of a rod 34. If, however, no sheet is present the lever 24 is not moved, and in consequence the dog 31 comes into contact with rod 34, and this is depressed and actuates the three following trip mechanisms. (1) A lever 39 on the rod 34 actuates a link 40, and arm 41 on a shaft 42 controlling the impression. (2) A pawl 43 on a rod 34 actuates the plunger 44 of a switch 45 to stop the press. (3) A pawl 46 acts on a lever 49 connected by a slotted link 50 to an arm 51 which opens the valve 16 to cut out the suction feed. To cause the machine to operate on sheets for alternate revolutions only, a dog 56 on a rod 54 mounted alongside a rod 34 is turned to the position shown in Fig. 4, and it is then moved by the dog 31 to depress the rod 54, and this by a lever 60 trips the pawl 43 out of the path of the plunger 44 of the switch. The lever 48 is now actuated by hand to prevent the feed of one sheet, and the absence of this sheet on the feed board will cause the next sheet but one to be automatically prevented from being fed, and the machine will continue to feed alternate sheets only. A crumpled sheet detector 69 is actuated by a crumpled sheet to cause a latch 71 to restrain the lever 24 from its normal movement, and this actuates the trips in the manner described in connection with detector 20.

in communication with the suction cylinders by means of ports h, h' , so as to hold the folded sheets c, c' , until they reach the point where the interfolding takes place. The passages d, e, f, d', e', f' then communicate with compressed air supply passages i, i' , to supplement the action of the brushes m, m' , bearing on the plain parts l, l' , of the drums. The invention is by the Soc. Anon. des Anciens Etablissements Braunstein Freres.

Indexed Books.

Under a patent by Mr. W. H. Rasbach in indexed books for time tables or other publications, the leaves bearing the subject matter are formed with stepped edges extending beyond one another in peripheral sequence in opposite directions on either side of the centre of the book, or of a section of

Interfolding Paper Sheets.

In apparatus of the kind wherein folded sheets of paper are placed in V-shaped spaces between similarly shaped teeth on the peripheries of two drums, and are interfolded by the rotation of the drums in opposite directions with the teeth in engagement, openings are provided leading from the V-shaped spaces to the hollow interior of the drums which communicate with a suction device for retaining the folded sheets correctly positioned

the book along the top edges and down the side edges, and if necessary along the bottom edges, so that when the book, or a section of the book, is opened at the centre, the indexed steps of the pages are displayed. In the form shown, the central section of the book has indexed steps 1-7 arranged in peripheral sequence along the top and sides, whilst each succeeding section of the book has similar steps 1'-7' extending beyond the edges of the pages in the preceding section.

De La Rue Sequel.

Directors of J. A. Weir Sued in Edinburgh.

Lord Ashmore, in the Court of Session, Edinburgh, on November 14th, pronounced preliminary judgment in an action in which the Edinburgh Investment Trust, Ltd., Edinburgh, sued Walter Wood Birrell, Barnet, and others, the board of directors and secretary of J. A. Weir, Ltd., papermakers, Alloa, for interdict against the respondents granting, on behalf of the company, any guarantee or any other obligation in connection with the repayment of the capital of the £800,000 8 per cent. convertible mortgage debenture stock of Thomas de la Rue and Co., Ltd., recently offered.

The complainers stated that they were one of the principal individual holders of preference shares in J. A. Weir, Ltd., which was incorporated in 1896 with a capital of £200,000 divided into 10,000 cumulative preference shares of £10 each and 10,000 ordinary shares of £10 each. In the prospectus it was stated that there were no burdens such as debentures or debenture stock ahead of the preference shares, and that it was not intended to create any. The whole of the ordinary shares were issued to Mr. J. A. Weir, the vendor, in part payment of the price of the business. The object of the offer of £800,000 mortgage debenture stock of Thomas de la Rue and Co., as stated, was to provide that company with the purchase price of acquiring the whole share capital of Chas. Goodall and Sons, Ltd., and all the ordinary shares of J. A. Weir, Ltd.

It was further set forth on the offer that the repayment of capital and the payment of interest and sinking fund of the stock would be jointly and severally guaranteed by Charles Goodall and Sons, Ltd., and J. A. Weir, Ltd., and that each of these companies would charge their assets to secure the guarantee. The price payable for the ordinary shares of J. A. Weir, Ltd., was stated to be £394,000 in cash. The complainers believe that the whole of the stock has been subscribed, and that the respondents were about

to execute formal deeds in connection with the guarantee. They said the respondents had no power or authority to execute these deeds, and that the interests of the complainers would be seriously prejudiced if the proposed guarantees and charges were granted by the respondents. The purposes to which the £800,000 was to be applied were purposes which did not concern J. A. Weir, Ltd., or the preference shareholders of that company. The debt proposed to be guaranteed and secured was a debt of Thomas de la Rue and Co., and would form a heavy and preferential burden on the undertaking of J. A. Weir, Ltd.

The respondents pointed out that in J. A. Weir, Ltd.'s memorandum of association one of the objects of the company was the issue of debentures and debenture stock. The agreement which they had entered into on behalf of J. A. Weir, Ltd., Thomas de la Rue and Co., Ltd., Charles Goodall and Sons, Ltd., and Warrillows, Ltd., defined reciprocal trading obligations for the benefit of all of these companies, under which J. A. Weir, Ltd., would supply the basic material of the respective businesses of the other companies and substantial economies would be effected. The respondents said that, prior to entering into the arrangement, their mills were almost at a standstill, whereas since, as a direct consequence of orders received in virtue of the arrangement, the mills were fully and steadily employed. It was estimated that the requirements of the other companies would absorb 80 per cent. of the output of J. A. Weir, Ltd., on a remunerative basis, and thus be to the direct and substantial advantage of all the members of the company, including the complainers. The respondents admitted that the proposals were not submitted to the company in general meeting or to the preference shareholders, but they contended that the granting of the guarantee and the execution of the deeds were within their powers as directors of the company.

Lord Ashmore heard counsel on the relevancy of the statements on both sides. After considering the debate in the light of the pleadings and authorities, his Lordship came to the conclusion that the case could not be disposed of at this stage without inquiry and he allowed a proof.

Paper in an Old Diary.

Recent instalments of the Farington Diary, which was discovered in an attic and which is being published by the *Morning Post*, contained two interesting references to paper manufacture over a hundred years ago. Under date, July 3rd, 1794, we read:—"I came home with the Alderman Boydell who told me Whatman now makes printing paper equal in quality to French paper and has an advantage from being manufactured more neatly. He does not think in the case of peace we shall again apply to France for the article of paper."

The second entry in the Diary, bearing the date June 9th, 1804, says:—"Murray, the book-binder in Princes-street, showed me to day a quire of straw paper. He said that manufacture had not answered and the partners had each lost several hundred pounds. The quality of the paper was good, but they could not manufacture it so cheap as the paper made of rags."

It is interesting to note that the latter date, 1804, is that in which Koops published his work on straw paper.

WALL-PAPER MANUFACTURERS.—Owing to the delay on the part of the Government in dealing with the company's taxation matters no settlement of their liability has yet been made, in consequence of which it is impossible at the present time to make up accounts showing the exact position of affairs. The directors, however, feel justified in paying the preference dividend up to August 31st last, which has already been done, and also in paying an interim dividend of 4 per cent. on the ordinary shares, warrants for which will be posted on November 30th. The annual general meeting of shareholders will be held on December 21st, 1922, and if it is possible to obtain a settlement of taxation matters with the Government in time to complete the accounts to August 31st last, the accounts will be presented to the meeting. If not it is proposed to adjourn the meeting to a date when the accounts can be completed and presented after a settlement has been arrived at with the Government.

Make a Good Impression!

LITHO ROTARIES

THE PRESSES WITH SPECIAL FEATURES

THESE LITHO ROTARIES have now been in use for many years, and have fully demonstrated their value to practical printers on all classes of work. When designing and developing these presses, our engineering experts collaborated with practical printers in order to give to the lithographic trade the best machines for direct and offset printing.

We specially invite those houses who at present are engaged solely in letterpress printing, and are considering the possibilities of litho machinery in their own business, particularly offset printing, to permit us to advise them in the matter. We shall be pleased to arrange for one of our experts to discuss the matter with any printer who writes us accordingly.

General printers who intend to extend their lithographic departments by installing Litho Rotary Presses should send for full details of the

- J&M Direct Litho Rotary**
- J&M Offset Litho Rotary**
- J&M Two-Colour Offset Litho Rotary**

The **J&M** Litho Rotaries are made at our Works in Altrincham, Cheshire.

Export Notes and Comments

Export Outlook Brightening.

It is encouraging to have a Chancellor of the Exchequer saying, as did Mr. Stanley Baldwin recently, that we may expect to see the present improvement in trade, still slow and still steady, continue in the next year. This, we believe, is by no means an over-optimistic statement of the probabilities that lie before British export trade. Export business in goods relating to print and paper shows a healthier tendency than do most other branches; it is, in fact, distinctly promising, and gives much ground for confidence. Moreover it should be remembered that a noticeable feature of this country's recent imports has been the steady growth in imports of raw materials. This and other facts go to suggest that, whilst there is already an upward movement in exports, a beginning has also been made towards still more marked improvement in the near future.

The Continental Situation.

THOUGH the Great War is receding into the distance, its appalling aftermath is still painfully evident in respect of international trade. It is amazing that the Reparations problem is even yet unsolved. Says a spokesman of the Norwich Chamber of Commerce: "Reparations is the one great problem of the moment, and the immediate settlement of the problem is of vital necessity to Europe and, indeed, to the whole world." This statement is hardly too strong for the occasion. Until this root difficulty is mastered the chaos of the exchanges can be but little mitigated and international confidence but slightly strengthened. It is to be hoped that Mr. Bonar Law's Government will endeavour to do better than its predecessor in encouraging overseas trade. The Labour Minister of the new Government has at any rate indicated that it is proposed to review the Trade Facilities Act for twelve months, and increase the maximum of capital in respect of which guarantees should be made to 50 millions, whilst if necessary, the grant of £26,000,000 already made for export credits will be increased.

Imperial Economic Conference.

THE Imperial Economic Conference on Empire Development which it is Mr. Bonar Law's intention to convene, should offer a splendid opportunity of extending British trade overseas. Enormous are the services which the Motherland and the colonies can interchange. Foodstuffs are the great need of the nerve-centre on this side the ocean, and we on our part can supply a wide range of manufactures—printing materials, station-

ery and paper among them. Openings for these goods have been made in several of our colonies. Orders, however, are not obtained on purely sentimental grounds. Quality and price must also be right. Where, however, any preference can be shown, it is likely to come to the "next of kin." A great point in our favour, too, is the reliability of our service. Encouragement of the Imperial trading idea may very well be given by such a conference as the Premier has in mind.

Canadian Approval.

As was to be expected, approval is forthcoming for the Conference idea from the colonies. The Hon. Peter Larkin, the High Commissioner for Canada, welcomes the proposal on these grounds: "It would induce the interchange of manufactured goods, and bring Canada into still closer union with the Motherland by improving the markets for the produce of her paper mills, her lumber trade, her orchards, and her farms. But Canada has taken the lead in promoting trade within the Empire; other Dominions have followed. Some years ago we gave the British Government a preferential tariff of 25 per cent.—a percentage which was later increased to 33, and which at the last session of the Canadian Parliament was still further increased. In this way the Dominion has done its share towards fostering trade within the Empire. But there is room for still further co-operation."

The British Industries Fair.

NOT far ahead now is the considerable influx of overseas buyers who are expected to attend the fourth British Industries Fair, which is to be held from February 19th to March 2nd, 1923. The previous Fairs have admittedly served a very useful purpose, despite the difficult conditions under which international trade was labouring at the time of their occurrence. They attracted buyers from a great number of overseas countries, as well as thousands of visitors from various parts of Great Britain, and the business done was said to be very encouraging. Next year, again, the Fair is to comprise two distinct exhibitions, one at the White City, London, and one at Birmingham (Exhibition Buildings, Castle Bromwich). The Printing and Stationery section will again be at the White City, and we expect to see this section, which was a considerable one last year, increased this time both in extent and interest. Every effort is made by the organisers of the Fair to assist the transaction of business, and the facilities which the occasion offers should be utilised by all buyers and sellers who can avail themselves of the opportunity.

Boosting Imperial Trade.

A BIG fillip should be given to inter-empire trade by the British Empire Exhibition to be held at Wembley in 1924. It is now clear that the whole of the far-flung British Empire will be taking part in this demonstration of trade possibilities. Canada and Newfoundland decided a week or two ago that they would participate, whilst support had previously been promised by Australia, India, New Zealand and South Africa. The interest of commercial men will be stimulated by the latest support, and there is likely to be an increasing demand for space. Some of the ground already allotted includes: Australia, 150,000 square feet; Canada, 150,000; India, 100,000; New Zealand, 40,000; South Africa, 25,000; and Newfoundland, 8,000. This makes a total of 473,000 square feet, apart from the space reserved for the various groups of Colonies and Protectorates, which exceeds 120,000 square feet. Malaya and the Straits Settlements propose to take 50,000 square feet. Canada intends to co-operate in the organisation of the Imperial Fisheries Exhibit and the Tropical Diseases Section of the Exhibition.

Strong Trade Representation.

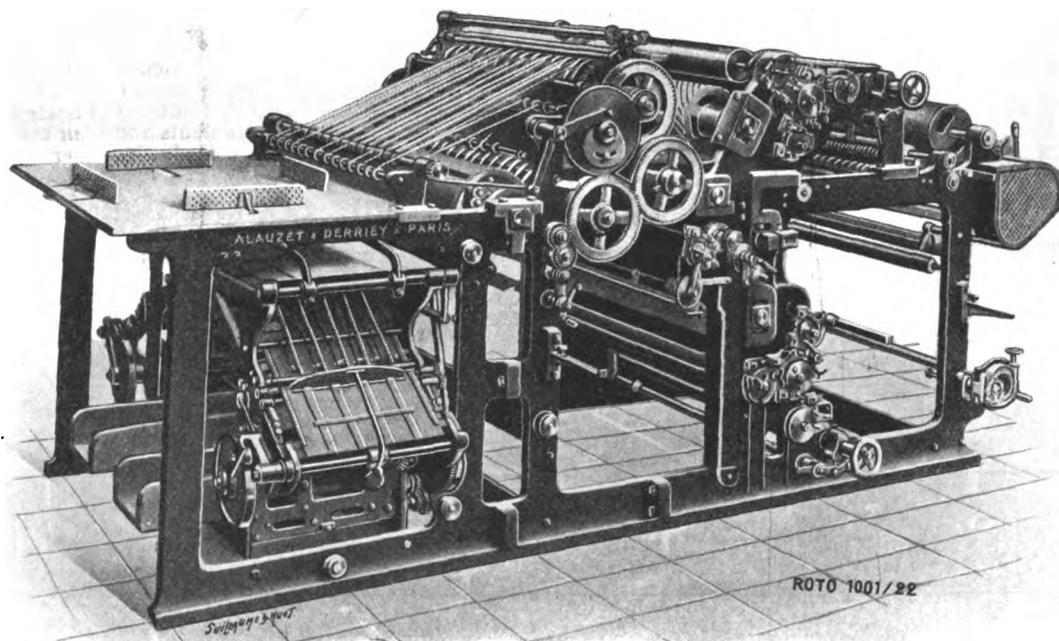

THE printing and allied trades of this country should be able to utilise the British Empire Exhibition to the end of greatly strengthening the trade links that connect the Mother Country with her kin across the seas. Very gratifying in this respect is the fact that the exhibition will have three separate sections especially devoted to printing, books, and paper and stationery, each of the three have a strong working committee, giving adequate trade representation. The home printing trade will undoubtedly have confidence in the committee supervising printing exhibits, this committee having as its chairman Mr. R. A. Austen-Leigh, with Mr. C. W. Bowerman and other leading spirits of the industry in collaboration. Overseas exhibitors and visitors can rest assured that these gentlemen will do all in their power to strengthen the bonds of trade and friendship between members of the printing and allied trades in this country and overseas. The British Empire Exhibition in itself will be an event ranking in importance with that of 1851 (the building for which is now represented by the Crystal Palace), but, of course, will be more extensive. The fact that the arrangements for the 1924 exhibition are already well in hand indicates the scope which will be aimed at, and we have no doubt that the printing and allied sections will prove to be something of an epoch-making character.

Canada and Marked Imports.

MEMBERS of the printing trade in this country who wish to see our own Merchandise Marks Act strengthened so as to afford more adequate protection against unfair overseas competition can hardly grumble at Canada's insisting that her imports shall be plainly marked with the country of origin. It is now law that such marking is compulsory on printed or lithographed matter of all kinds, including books and pictures, imported into Canada. The country of origin of a manufactured article is held to be the country in which the article has been finished by a substantial amount of labour amounting to not less than one-fourth the cost of production of such article in condition as imported into Canada. The order was assented to under provision that the Governor in Council may from time to time, as he deems expedient, order that goods of any description or class specified in such order, imported into Canada shall be marked, stamped, branded or labelled in legible English or French words, in a conspicuous place that shall not be covered or obscured by any subsequent attachments or arrangements, with the words "Made in—," "Produced in—," "Printed in—," or other words of similar import, or the name of the manufacturer, producer or publisher, accompanied by the name of the country, or a place in a province, state or other division of a country where the goods have been manufactured or produced.

Exports to Canada Hampered.

THOUGH we may not feel free to protest against this effort of Canada to protect her own industries, it is nevertheless clear that the new regulation will, particularly until some space of time has elapsed, hamper British exporters who have been supplying Canadian consumers with printed matter of various kinds. We note that the *Canadian Printer and Publisher*, whilst hailing the order as protecting the Canadian printer, points out nevertheless that this order, which will be unfamiliar for some time to come to the foreign exporter of such goods into Canada, will cause considerable expense to the Canadian merchant, and the loss of orders, as provision is contained in the order to the effect that goods imported into Canada which come under this order, which do not comply with the requirements of such order, shall be subject to an additional duty of ten per cent. *ad valorem* to be levied on the value for duty purposes, and in addition such goods shall not be released from Customs possession until they have been so marked under Customs supervision at the expense of the importer. It is United States exporters, more than British, who will be hit by the new regulation, as U.S. exports of printed matter to Canada greatly outweigh our own. Practically all the advertising matter which is circulated yearly by the various insurance companies is printed in the U.S., as well as most of the show cards, coloured posters for billboards, price lists, stationery, etc., used by Canadian branch houses of foreign corporations.

Australia and British Paper.

MANUFACTURERS of the higher grades of writing and typewriting papers in this country are considerably perturbed at the attitude of the Australian Government, who intend to impose, from June next, a tariff of 20 per cent. *ad valorem* on these classes of paper, which were formerly admitted free. The regulation would mean that a high-class paper, the price of which was 1s. a lb., would have to pay a duty of 2s. a cwt. In view of the fact that British manufacturers have found quite a good market in Australia for these higher grade papers, the effect of the new duty is regarded with apprehension. These qualities of paper are not made in Australia, so that in imposing a prohibitive tariff the Government of the Commonwealth are not protecting any Australian manufacturer which might of course be quite a legitimate object to serve. Moreover, these high-grade writings and typewriting papers are the raw material of the stationer and jobbing printer in the Commonwealth. Such an obstacle as a 20 per cent. *ad valorem* duty is a serious one for British papermakers who have built up important connections with clients in the Commonwealth. At the present time, when competition is all too severe in other directions, the imposition of the duty is particularly irksome and would inflict serious injury upon an important branch of British industry. The Papermakers' Association are taking the matter up with the Australian authorities in this country and

are also acting through the Federation of British Industries. Doubtless, when the arguments are placed before the authorities in Australia, a more correct view of the situation may be taken. Hitherto, manufacturers in the Mother Country have had nothing to complain of in the treatment meted out to their goods sent to Australia. For example, British news-print is admitted free under the revised tariff. Even the increased duty on British wrapping papers from 5s. 6d. per cwt. to 8s. per cwt. is not regarded as unreasonable. It is all the more surprising, therefore, to learn that writing and typewriting papers should be singled out for more drastic treatment, and it is to be hoped that the representations of the British Papermakers' Association will prove effective.

New Zealand's Favourable Attitude.

EXPORTERS in this country who have an eye to the New Zealand market can at any rate be assured that their goods will, even apart from the preference given in the Customs' tariff, be regarded with much more favour than those of sellers outside the Empire—provided only that reasonable consideration is given to the special requirements of the New Zealand buyer. Mr. R. W. Dalton, British Trade Commissioner in New Zealand, emphasises this point very strongly in a recent article contributed to *The Times*. The New Zealand Government, he says, and local authorities "are deliberate in their preference for British materials, plant and work, and both the merchant and the general public follow suit. To some extent, of course, this is due to a belief in the superior quality of British workmanship, but deep down in the hearts of Ministers, local authorities and the general public it is known to be a practical expression of their belief in the necessity for the consolidation of Empire. In fact, it is the rule rather than the exception for commercial firms in New Zealand to go to infinite pains to transfer to the United Kingdom such business as they have previously given to foreign countries, and in numerous cases which have come to my notice they have actually made losses in so doing."

Openings in South Africa.

THERE would seem to be every reason why British producers should pay more attention than they have been doing to the business possibilities offered by the Union of South Africa. His Majesty's Trade Commissioner at Cape Town holds out great promise to enterprising British firms. Interviewed in London recently by a correspondent of the *Manchester Guardian*, he showed himself distinctly optimistic concerning business prospects in the Union. In the course of a conversation the Commissioner said there is every indication that the Union of South Africa has "turned the corner" so far as trade depression is concerned. He is of opinion that manufacturers in this country could very profitably give more attention to trade openings in South Africa, and emphasises the point that more ought to be done in the way of arranging for local representation, as business is still going elsewhere than to Great Britain, owing to neglect on the part of many firms in this country which do not realise that a representative on the spot is vitally necessary. From Johannesburg and from Cape Town, the Senior Trade Commissioner and himself are in personal touch with local people in certain lines who are only too anxious to arrange for the representation of firms in this country who desire to extend their export trade in South Africa. The Department of Overseas Trade here always has up-to-date records of these prospective agents.

The Printing Trade in India.

ONE of the factors, surely, that go to limit the vitality of India's printing trade—and consequently to curtail its imports of printers' supplies of all kinds—is the dominating position in India of State-subsidised printeries. We in this country have had just a taste of what State printing is, and the printing trade here wants no more of it. What the Indian trade has to put up with is imaginable from the fact that of the 158 printing establishments in India no less than 38 are run by governments and local bodies, and they employ 13,752 persons out of the 32,585 employed in this industry in all India, according to the census of large industrial establishments. That is to say, over 24 per cent. of the printing presses are in the hands of Government and over 40 per cent. of the persons employed in the large printing establishments are Government servants. The

comparison as regards printing presses becomes even more marked when it is remembered that only three out of the 38 Government-owned presses employ less than 100 men, whereas there are 50 doing so out of the 120 privately-owned presses; so that a more accurate comparison is to read 35 against 70. We are not surprised to find that there is a body of opinion in India protesting against this state of affairs and demanding mitigation of the waste of public money and the unfair competition which such widespread Government trading entails. Our attention is drawn to the matter by Messrs. Lal Chand and Sons, printers, of 76, Lower Circular-road, Calcutta, who have issued a substantial and informative pamphlet dealing with the whole subject of State-owned printing establishments and their competition with private trade. In the general interests both of India and this country, and particularly in the interests of the printing trade both there and here, we would urge all who have influence in the matter to lose no opportunity of assisting Indian printers to obtain a reasonable measure of relief from the despotism of the Government press.

Difficulties of the Indian Market.

THOSE interested in the possibilities of developing trade with India will find much useful information in the recently published "Report on the Conditions and Prospects of British Trade in India," by Mr. Thomas N. Ainscough, H.M. Senior Trade Commissioner in India and Ceylon, published by the Stationery Office at half-a-crown. It is encouraging to learn from this publication that the period of severe depression which followed the post-Armistice boom has recently given place to marked improvement. The handicap of large uncleared stocks, which are now being disposed of, was brought about by the wholesale repudiation of liabilities and dishonouring of drafts by Indian importers and dealers, who had bought heavily in the boom period. Mr. Ainscough attributes to the forbearance of British traders, and to the cautious attitude of the banks, the fact that the crisis has passed without any serious dislocation of credit conditions. The Commissioner points out that the next few years "are bound to be a most difficult period of transition, and it will largely depend upon the courage, tact, and good will of the British commercial community in India if we are to maintain that remarkable position of power and influence which has been built up by generations of British merchants on the firm rock of rectitude, trust, and fair dealing."

Trade with Egypt.

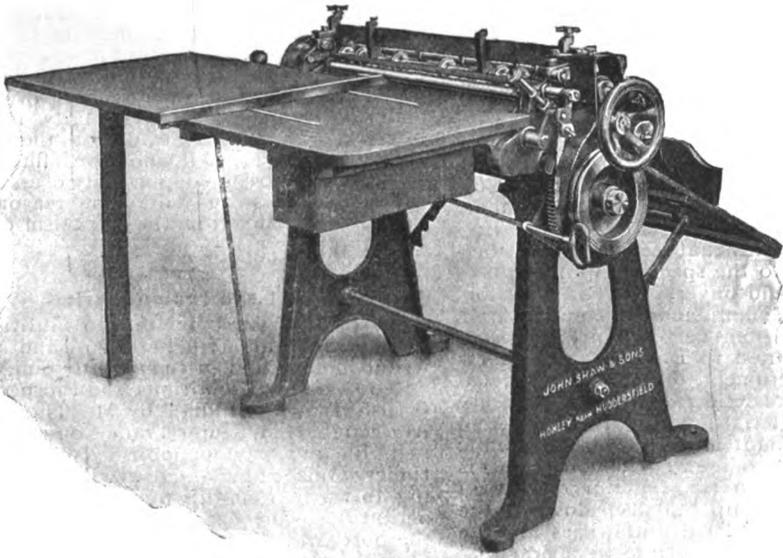

IN Egypt, unfortunately, the British trader is handicapped, as in India, by the people's dissatisfaction with the British Government's record in respect of native aspirations towards self-determination. A recent indication that the clash of feeling is not yet pacified is seen in the suppression by the Government of the *Liberté*, the Egyptian Nationalist newspaper published at Cairo. Anti-British feeling has a lot to do with the fact that British exporters to Egypt have lost immensely to their German rivals. How serious this loss has been is illustrated in the case of printing paper. During the first five months of 1921 British exporters of printing paper sent supplies to Egypt valued at £23,451, whilst in 1922 the figure for the same period had dropped to £148. German printing paper exports, on the other hand, amounted to only £920 in the first five months of 1921 but in the corresponding period of this year had grown to £7,927.

The Market in China.

THE progress towards more settled conditions in China makes the prospect of export trade development in that direction more promising. The Consul-General of China, speaking in London recently, emphasised the great trading potentialities which are opening up in the vast realm of China. He stressed the goodwill felt toward this country and indicated that big efforts are being made on the Chinese side to improve trade relations with Great Britain. The most formidable competitor for supplying the Chinese market would seem to be Germany, who is tackling available opportunities with characteristic thoroughness. British and American traders find this competition difficult to overcome, but there is room for a great deal more enterprise on the British side, and particularly for more careful study of the demands of the buyer and more reliable carrying out of prompt and satisfactory shipments.

THE "NEW IMPERIAL" ROTARY PERFORATING MACHINE.

The Easiest and Simplest Machine to work on the market.

MADE for Straight-through Perforating only and Straight-through and Striking. Will Strike Sheets up to 36 in. long. In five widths, to Perforate Sheets up to 18 in., 24 in., 30 in., 36 in. and 42 in. wide. Two distinct types of Perforating can be done on machine; as used by the best commercial houses. Scoring, Creasing and Cutting or Slitting can be done on machine. Will handle anything from Manifold to thin card-board, also gummed paper.

Three Speeds can be obtained, with patent "Friction Clutch" drive.

The "Universal" Perforating Machine. A necessity for every up-to-date Printing, Bookbinding and Stationery Office.

PRICES AND FURTHER PARTICULARS OF:—

JOHN SHAW & SONS, Perforating Machine Works,
HONLEY, Nr. Huddersfield.

The Goods Australia Wants.

Room for Increased British Exports of Manufactures Relating to the Printing Trade.

Australia, though able to export vast quantities of foodstuffs, wool and other natural products, is still heavily dependent upon overseas suppliers for many classes of manufactured goods, and a quite considerable section of her imports includes printed matter, printing machinery and minor printing supplies of various kinds. The United Kingdom takes a prominent part in providing the goods belonging to this section, and in some lines our exports stand higher than those of any other exporting country. The United States of America, however can claim a very big total amongst these Australian purchases—printing machinery being an outstanding feature—whilst there are other important rivals in the field as suppliers of Australia's needs in respect of the printing trade.

British Supplies Favoured.

A surprising proportion of the total printed matter used in Australia—probably something like one-third of the whole—comes from this country, whilst the United Kingdom's share of the quantity imported yearly into Australia reaches a much higher proportion, say about four-fifths of the whole. The United States comes second in the exports of printed matter, but America's contribution is only about one-sixth of the U.K. figure. In view of the immense advantages which the States possess by virtue of geographical position, these proportions are remarkable, and the large quantities of British goods of various kinds imported speak eloquently for the favour with which U.K. supplies are regarded by our kinsmen in the antipodes. The sentiment is one that should be appreciated by Great Britain, and it is to be hoped that the proposed Imperial Economic Conference will find ways and means for strengthening this happy trading relationship.

Printed Matter.

Under the heading of "Printed Books" (including fashion books and plates, music, periodicals and newspapers), the latest figures available, i.e., for the fiscal year 1920-21, show that the United Kingdom exported these goods to the value of no less than £860,000 to Australia, as against supplies valued at about £150,000 from the United States. The supplier next in the running for this trade comes far behind, New Zealand taking this position with goods representing about £10,000.

A line in which the United States holds a predominant position is playing cards, in sheets or cut. Her exports to Australia of these goods amounted to more than 21,000 dozen packs, valued at well over £13,000. British supplies of the same goods came to only about one-third of this amount, and the only other exporter worthy of mention was Japan with 188 dozen packs valued at £205. The question is surely worth consideration why the United States should have so big a pull over ourselves in this respect. No doubt American printeries have some very fine and up-to-date plants for playing card manufacture, but there is surely no reason why British makers should not be well to the fore in this respect, and the market would seem to be one that calls for further enterprise on our part.

Printing Machinery.

The United States is, of course, far ahead of the United Kingdom in respect of the supply to Australia of printing machinery. Under the heading of "Printing machines and presses, linotype, monotype, mono-line, and other type-composing machinery; machinery used exclusively for, and in actual processes of electrotyping and stereotyping; also aluminium rotary graining machines," the United States' exports for the period amounted in value to about £190,000, whereas supplies from the United Kingdom were valued at only about £71,000. A fact which further emphasises the strong position of the United States in this market is that Canada also sent printing machinery to Australia valued at £3,460, a remarkable feature noticeable in the Customs returns being that "according to country of origin"

these Canadian supplies were only valued at £5. This amazing discrepancy is no doubt explained by the fact that the vast bulk of these goods were substantially made in the United States, being sent to Australia *v.a.* Canadian factories for the sake of the tariff advantages thus obtainable.

Printing Ink.

The United States, again, does about double the trade of the United Kingdom in "printing ink, printing and stencilling ink." Supplies from the United Kingdom for the period under review were valued at about £11,000 (representing about 110,000 lbs.), as against consignments from the United States valued at about £21,000 (1,300,000 lbs.). In this case also the United States exports are probably considerably augmented by goods shipped via Canada, only 4,514 lbs. of Canada's printing ink exports being her own "according to country of origin," whereas her total exports to Australia were 15,950 lbs.

The United Kingdom figures as the only exporter to Australia of printers' roller composition, her exports being valued at £1,325.

Miscellaneous Printers' Materials.

Of "printers' materials—circles, clumps, curves, knives (paring), rules and leads," the United Kingdom sent goods valued at £6,436, whereas the United States exports amounted to only about £2,300.

In "printers' types" (including spaces and quads, lino and other slugs, metal furniture and quotations), the United Kingdom again heads the list, sending goods valued at about £6,090. Her only serious competitor is again the United States, which sent £4,729 worth of goods.

Matrices for stereotyping purposes were sent by the United Kingdom to the value of £7,989, as against United States' exports valued at £10,040.

In "Plates prepared for engravers and lithographers" the United States has the lead, with exports valued at £12,609, as against £2,833 represented by goods from this country, the difference being enhanced by the fact that, "according to country of origin," only £1,254 worth of the latter figure were actually made in the United Kingdom. The only important competitor for Australian trade in this class of goods is France, that country being responsible for the manufacture of exports valued at £1,329.

Paper Tenders for Egypt.

The Superintendent of the Government Press, Cairo, invites tenders for the supply of strong writing paper for certificates, strong smooth surface writing paper for registers, tinted paper, Bristol boards for folders, covers, etc., paper for file covers, cream wove paper for forms, tinted paper for forms, grey boards, thickness 1.1 mm. and 2.2 mm., wrapping paper for "news" brands, gum paper, white and tinted for 1923-24. Sealed tenders on the proper form addressed to the Superintendent, Government Press, Bulaq, Cairo, will be received up till noon of December the 28th, 1922.

Representation by a local resident agent is essential. The Department of Overseas Trade will furnish to United Kingdom firms, who are not already represented, the names of United Kingdom merchants with branch houses in Egypt who are prepared to handle tender on behalf of third parties.

A copy of the conditions of tender and specification together with samples can be seen by United Kingdom firms on application to the department of Overseas Trade (Room 42), 35, Old Queen-street, S.W.1.

A limited number of copies and of samples are also available for firms in the provinces, who are unable to arrange for inspection in London. (Reference 9483/FE/MP).

FOUNDED at Brisbane, Queensland, in 1872, the *Telegraph* has just completed the fiftieth year of its existence.

British Empire Exhibition.

The Printing and Allied Committees.

The foundations of the British Empire Exhibition, which is to be held at Wembley in 1924, are being carefully and well prepared. A growing demand for space is reported.

The following is the constitution of the committees for the allied trades:—

Printing Committee.—Mr. Alfred F. Blades, Messrs. Blades, East and Blades, 23, Abchurch-lane, E.C.4; Mr. George Eaton Hart, St. Clements Press, Ltd., Portugal-street, Kingsway, W.C.; Mr. J. R. Riddell, Principal, London School of Printing and Kindred Trades, Stamford-street, S.E.1; Mr. F. O. Roberts, J.P., M.P., 61, Collingwood-road, Northampton; Brigadier-General W. Wright Bemrose, D.L., V.D., J.P., Messrs. Bemrose and Sons, Ltd., Midland place, Derby; Sir James Owen (president, Newspaper Society), *Express* and *Echo*, Exeter; Mr. T. E. Naylor, J.P., 175, Highbury Hill, N.5; The Rt. Hon. C. W. Bowerman, J.P., M.P. (Deputy Chairman), Trades Union Congress General Council, 32, Eccleston-square, S.W.1; Sir William Waterlow, K.B.E., Messrs. Waterlow and Sons, Ltd., Broken Wharf, Upper Thames, E.C.4; Mr. A. E. Holmes, secretary, Printing and Kindred Trades of the United Kingdom, 60, Doughty-street, W.C.1; Mr. Edward Hunter, the Sun Engraving Co., Ltd., Milford-lane, W.C.2; Mr. R. A. Austen-Leigh (chairman), president, Federation of Master Printers, 1, New-street-square, E.C.4; Mr. Jas. Forman, Messrs. T. Forman and Sons, Sherwood-street, Nottingham; Mr. Edward Valpy, chairman, Messrs. Sutley and Silverlock, 92, Blackfriars-road, S.E.1; Mr. George Brearley, manager of Printing Works, Co-operative Wholesale Society, Ltd., Balloon-street, Manchester.

Paper and Stationery Committee.—Sir Howard Spicer, K.B.E., 50, Upper Thames-street, E.C.; Mr. George H. Law, the *Scotsman*, Edinburgh; Major James W. Cropper, Summer How, Kendal; Mr. Joseph Dixon, J.P., Messrs. Peter Dixon and Son, Ltd., Spring Grove Mills, Oughtibridge, near Sheffield; Mr. J. G. Flowerdew Lawson, J.P., Quarewood, Stow-in-the-Wold, Gloucestershire; Mr. Geo. W. Mascord, United Newspapers (1918), Ltd., 12, Salisbury-square, Fleet-street, E.C.4; Sir Frederick Bowater, K.B.E. (chairman), managing director, Messrs. W. V. Bowater and Sons, Ltd., 159, Queen Victoria-street, E.C.4; Mr. Felix J. Thomas, Messrs. Edwin Thomas and Co., Ltd., 34, Upper Thames-street, E.C.4; Mr. W. Leonard Tod (president of the Papermakers' Association), Wm. Tod, Jun., and Co., Ltd., Springfield Mills, Polton, Midlothian; and Mr. John Walker (deputy chairman), Messrs. John Walker and Co., Ltd., Farringdon House, Warwick lane, E.C.4.

Books Committee.—Mr. Geoffrey S. Williams, Messrs. Williams and Norgate, 14, Henrietta-street, Covent garden, W.C.2; Sir Frederic G. Kenyon, K.C.B. (chairman), director and principal librarian, British Museum, W.C.1; Sir Frederick Macmillan, 22, Devonshire place, W.1; Mr. Humphrey S. Milford (deputy chairman), Oxford University Press, Amen-corner, E.C.4; Mr. Alfred Wm. Pollard, C.B. (keeper of printed books British Museum), 40, Murray-road, Wimbledon, S.W.19; Sir Ernest Hodder-Williams, C.V.O., St. Paul's House, Warwick-square, E.C.4; Mr. John Buchan, Elsfeld Manor, Oxford; Mr. Philip H. Lee Warner, managing director, Messrs. Charles Whittingham and Griggs (Printers), Ltd., Chiswick Press, 20-21, Tookscourt, Chancery-lane, E.C.4; and Mr. C. Hagberg Wright, LL.D., librarian, London Library, St. James's-square, S.W.1.

Maps, Cartography Committee.—Sir Chas. F. Close, K.B.E., C.B., C.M.G., F.R.S. (chairman) (late Director-General Ordnance Survey Department), Coybury, St. Giles Hill, Winchester; Colonel E. M. Jack, C.M.G., D.S.O., Director-General Ordnance Survey Department, Southampton; Mr. E. A. Reeves, F.R.A.S., F.R.G.S., Map Curator, Royal Geographical Society, Kensington Gore, S.W.7; Mr. George Philip, F.R.G.S., Hornund, Eastcote, Pinner, Middlesex; Mr. John Bolton, F.R.G.S., F.R.C.I. Messrs. Edward Stanforth, Ltd., 22, Hawes-road, Bromley, Kent; Captain John Bartholomew, M.C. Messrs. John Bartholomew and Son, Ltd., Duncan-street, Edinburgh.

To sway others, don't be easily swayed yourself. Have deep-rooted convictions.

What our Manufacturers are Doing

British Machinery and Other Products that
Merit the Attention of Overseas Buyers.

Offset Printing Supplies: Algraphy, Ltd.

The immense strides which are being made in the offset method of producing lithographic work have induced Messrs. Algraphy, Ltd., to pay special attention to the requirements of offset work, particularly in the direction of producing special preparations and graining of aluminium and zinc plates, and in achieving the perfect surface of rubber blanketing which will print long editions without losing any fraction of the work which may have been put on the plate by photography or transferring, and will also print large editions without embossing or becoming tacky. The rapidity with which this new process has "caught on" has forced this firm to keep constantly in touch with manufacturers of presses in order that their specifications as regards gauge of plates may be carried out, and the special conditions, such as climate from extreme heat to intense cold, varying the graining of the plates to meet abnormal conditions. Messrs. Algraphy, Ltd., whose offices are at Philip-road, Peckham, London, S.E.15, invite the trade to correspond with them on any technical matters which may be to their mutual advantage in the development of this perfect and unique process, which bids fair to revolutionise the whole of the printing art.

Paper Bag Machinery: Bumsted and Chandler, Ltd.

The latest development of the well-known Bumsted's patent machine is the production of a lined square-bottomed bag, printed and made in one continuous process direct from the paper rolls. The two rolls are fed simultaneously into the machine, one for the lining and the other for the outer covering. They are pasted and rolled together before passing through the printer, and from thence led to the bag machine where, in the process of making, the double sheet of paper is treated similarly to a single sheet. The result of this achievement is the production of lined and printed bags of singularly perfect shape and quality upon a basis of extreme economy. It is claimed that these machines require for their driving considerably less power than any other bag machines on the market, an important factor in these days of high production costs. The makers, Messrs. Bumsted and Chandler, Ltd., Cannock Chase Engine Works, Hednesford, Staffs, will at all times be glad to hear from those interested.

Machinery: Edmund Bush and Son, Ltd.

Overseas buyers of machinery for varnishing and gumming or for ink grinding will find items of special interest amongst the apparatus which is being produced by Messrs. Edmund Bush and Son, Ltd., of Crown Point-road, Leeds. The firm hold patents which put them in a strong position for the manufacture of varnishing and gumming machines, of which they make a fine range with features that are worthy of note by all requiring such goods. Another speciality which has met with much appreciation is their patented drying apparatus which is adapted to be attached to varnishing or gumming machines of any make and to dry sheets either spirit varnished or gummed. Exceptionally powerful ink-grinding mills are another manufacture, whilst the firm's useful illustrated catalogue shows also a patent ink-mixing machine of great utility for working up old inks.

Envelope Making Machinery: David Carlaw and Sons, Ltd.

Asked as to their recent trading endeavours, this prominent Glasgow firm showed an optimistic outlook in regard both to themselves and their customers. They advise their clients not to get into the habit of carrying on with the idea that business is bad and will not improve, this being the most dismal kind of short-sighted policy. Messrs. Carlaw maintain that there are, actually, distinct signs of a trade revival, and they urge that it is

vitaly important that all in the trade should be prepared to take the utmost advantage of it. As experts in the manufacture of envelope machinery they claim to be qualified to help their customers toward success, and state that in installing the world-renowned "Leader" envelope folding and gumming machine, with all its modern improvements and equipments, the user is grasping the quickest, easiest and most efficient means of coping with public demands. The "Leader" turns out a high-class envelope equal in every way to hand-made, with absolute accurate folding and perfect gumming, at a speed of 150 envelopes per minute with a good quality of paper, and adequately fulfils the requirements of envelope manufacturers anxious to meet the present-day need, and increase their business capacity. They offer an open invitation to all to send for catalogues and prices.

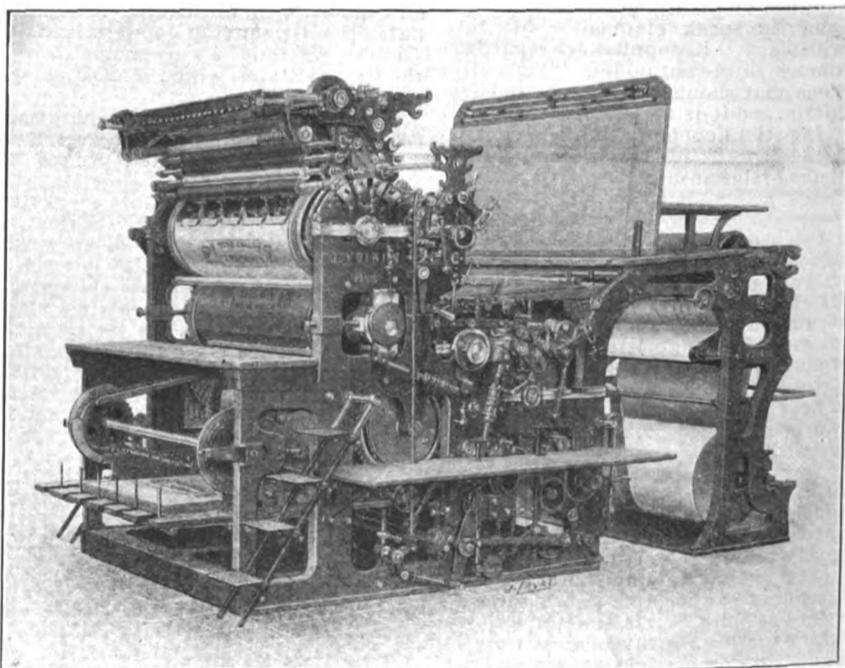

Offset Machinery: Francis J. Connolly, Limited.

Messrs. Francis J. Connolly, Ltd., of Union Works, 62, Park-street, Southwark, advise us that they will shortly be publishing a new and comprehensive catalogue dealing with

use to-day—it is safe to assume that the new ideas are valuable. The Marinoni-Voirin machine illustrated herewith is designed to print, simultaneously, both sides of the sheet. It may be fitted with either a reel-feeding attachment with rotary all-size cutter, or with the pile-type suction feeder which Messrs. Connolly supply. It is essentially useful for the rapid production of two-sided work such as local newspapers, pamphlets, etc., producing such work up to a speed of 3,500 quad-demy sheets per hour. It is particularly accessible in design, and there are many of them in successful operation.

Machinery for Binders, Printers, etc.: Oscar Friedheim, Ltd.

An immense variety of labour-saving machinery for bookbinders, printers, manufacturing stationers, lithographers, envelope manufacturers, box-makers and others is supplied by Messrs. Oscar Friedheim, Ltd., of 7, Water-lane, Ludgate, London, E.C. One of the firm's specialities is book-sewing machinery, machines for this purpose being made in six sizes and designs, for letterpress or account book sewing. These machines are

Voirin Perfecting Offset: Francis J. Connolly, Ltd.

the many varieties of offset machines—eight in all—which they offer to the trade. All these machines are illustrated therein and in addition an elevation of each machine is shown enabling its design and construction to be immediately understood. The letterpress analytically describes the many particular features which give the products of Messrs. Marinoni-Voirin a character distinctive from all other machines designed for the same process of printing, and a decided innovation is made by the introduction of a series of diagrammatic illustrations of special mechanical details which are of particular interest to the machine operator. This class of machinery has caused the lithographic art to develop rapidly on the photographic side, and the same firm have now on exhibition at their premises a new half-tone camera embodying certain definite improvements (patented) which are of particular value in cameras of large size where parallelism of the screen and plate has been always a most difficult condition to obtain. As the builders of this camera have had about thirty years' progressive experience in the production of half-tone cameras—hundreds being in actual

supplied to sew over or through tape, over cord, and through mull or plain French. In these as in many other Friedheim machines, patented features are embodied which are a speciality of the firm. Strong lines also are offered to bookbinders in folding machines of different designs, guillotines, hydraulic presses, signature gathering machines, etc. Amongst other machinery handled a prominent position is given to envelope-making machines, and it is worth noting that Messrs. Oscar Friedheim, Ltd., have been appointed sole agents for a combine of envelope machine manufacturers, and are in a position to supply the latest and most up-to-date machines for envelope-making.

Printing Machinery: William J. Light and Co., Ltd.

The well-known firm of William J. Light and Co., Ltd., 36-38, Whitefriars-street, London, E.C.4, makers of flongs, press rubbers and other specialities for the printing trade, include amongst their activities an agency for the Augsburg-Nürnberg A.-G., a new rotary printing machine by whom we are able to

illustrate herewith. The machine shown claims many points of advantage. The impression and plate cylinders have star-shaped cross sections with hollow hubs, in which shafts of wrought Siemens-Martin steel are forced by hydraulic pressure, a rigid whole being thus obtained which offers great resistance to bending. The journals run in ring-lubricating bearings of modern design and, like the cylinder surfaces, are accurately ground in special machines. The composition inking rollers are journaled in special frames of latest design, and can be put in and out of operation from the feed side of the machine by a simple hand operation. The distribution of the ink can be regulated during the operation of the machine by reliably working eccentrics. Band brakes regulate the paper feed. They consist of broad steel bands conveniently adjustable from the floor by means of weights. Paper reel adjusting devices are provided which can be easily adjusted during the operation of the machine. The folding apparatus runs entirely in ball bearings, is extremely strongly constructed and has accurate folding and cutting

Bartlett's-buildings, Holborn-circus, E.C.4, and those in the trade who are likely to need assistance in this direction would do well to bear Mr. Stanleigh's address in mind. Besides standard machines in a variety of designs this maker's services are at the disposal of customers who may require special numbering apparatus designed to meet their own individual requirements.

Printers' Rollers: "Durable" Printers' Roller Co.

Rollers and roller composition belong to those seeming details of a printing machine which may either make or mar the work of the press. Printers both at home and abroad are therefore well advised to be careful that in the purchase of these supplies they deal with makers whose experience and standing merit confidence. This can certainly be said of that long-established house, The "Durable" Printers' Roller Co., Ltd., of 14, Charles-street, Hatton-garden, London, E.C.1, whom printers everywhere can safely consult in respect of any difficulties they may encounter in the

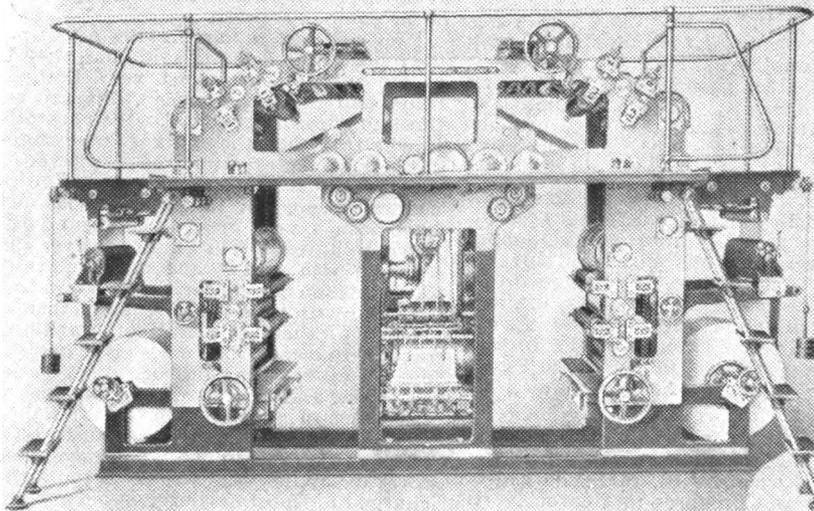

Messrs. Kidd have recently brought out a much improved matt black ink, having the dull flat finish combined with smooth working which is the very essence of this class of ink. Lithographic printers on tin-plate will be interested in the specimen plate of litho tin-plate printing inks, also issued by this firm. The specimen shows each colour in duplicate, i.e., on the naked tin and over white ink, and is a most valuable and instructive production. We understand that Messrs. John Kidd and Co., Ltd., claim to be the largest exporters of printing inks from this country, and, however this may be, their qualities and prices in conjunction with their world-wide sales organisation, certainly combine to put them in a strong position in export trade in British printing inks.

Printing inks: Lorilleux and Bolton, Ltd

From that go-ahead firm of printing ink and varnish manufacturers, Messrs. Lorilleux and Bolton, Ltd., of 31-34, Cursitor-street, Chancery-lane, London, E.C.4, we have received a very attractive specimen book just issued for the new year. It is devoted to showing the effect of these makers' "Duoffset" inks (double-tone inks for use on the offset litho press), intended to enable the offset litho worker to get two-colour effects in one printing. The booklet contains a series of well-produced photo-litho plates of a difficult architectural subject, the same subject being repeated in a variety of colours, showing the capacity of these inks to yield delightfully "contrasty" effects. It is something new to provide double tone inks for the litho process, and, with the growing demand for high-class offset inks, this specimen book should be of interest to all progressive printers, not only from the ink point of view, but as showing what can be done on the offset machine. For the production of illustration work by the offset process, also, these inks are of special interest to printers.

Inks and Rollers: Usher and Co.

For over half-a-century or more the inks and rollers of Messrs. Usher and Co., of 33, Bouverie-street, London, E.C.4, have enjoyed an enviable reputation both at home and abroad. As evidence of their popularity we are told that in a list of leading home newspapers, those with mammoth circulations, compiled quite recently, it was found that twenty-two out of twenty-nine were produced with Messrs. Usher and Co.'s manufactures. Producers of high-class magazine and other periodical work and leading poster printers also use very large quantities of Messrs. Usher and Co.'s inks, for the colours are bright and lasting, and possess such covering power that they are extremely economical in use. This firm also manufactures inks for every other printing process: die-stamping, collotype, photogravure, and so on, also gold bronze inks in all shades. They state that the last-named have entirely superseded the old-fashioned and unhealthy use of bronze powders. Messrs. Usher's rollers are well known and are used in increasing quantities all over the world, it being claimed for them that they have an exceptionally long effective life. Being made of standard virgin materials, the composition may be remelted and recast many times with a minimum of deterioration, ordinary care being used. The rollers are resilient, durable and satisfactory in every way. Messrs. Usher manufacture both their inks and roller composition to suit special climatic and other conditions, and claim that their methods of packing for export leave nothing to be desired.

Two-Reel Rotary Printing Machine: William J. Light & Co., Ltd.

mechanism. Readers desirous of more detailed information about this machine can obtain all particulars required on application to Messrs. W. J. Light and Co., Ltd., at the address given above.

Ruling and Perforating Machines: John Shaw and Sons.

Business is still reported to be brisk at the Honley Works of this well-known manufacturing firm. Messrs. Shaw are now making a new four-sider disc ruling machine of the "Super-Imperial" type. This machine is made for feint lining only or feint lining and striking two, three, or four colours on both sides of the sheets, both ways, at one operation. It will feint line both sides both ways from 10 to 15 reams per hour, according to the size of the sheet. The makers can add to this machine either their latest model ream feeder or patent pile feeder with single or duplicate tables. They are also making a new suction feeder which will feed any class of paper from the thinnest manifold to thin cardboard. This feeder does away with the knives, of course, and the edges of the sheets are not cut at all. This is a very good feeder indeed, and will feed dead accurate. They can add the suction feeder to their four-sider disc machine or to any existing disc or pen ruling machines. Their "New Imperial" rotary perforating machine is a remarkable and very versatile machine, as it will do fine perforating, slot perforating, scoring, creasing and slitting. A speciality of this machine, also, is the good striking work which it will do. It is made for straight-through perforating only, and straight-through perforating and striking, and the striking is very good indeed. The firm has sold a very large number of these machines all over the world this year.

Numbering Machines: E. W. H. Stanleigh,

The supply of numbering machines both for export and for use in this country is the speciality of Mr. E. W. H. Stanleigh, of 23

supply and use of rollers and roller composition for all classes of printing.

Printing Inks: John Kidd and Co.

Messrs. John Kidd and Co., Ltd., of 11, Wine Office court, Fleet-street., London, E.C.4, are no doubt well known to all our readers as one of the oldest established firms of printing ink manufacturers in the United Kingdom. From among their more than four hundred lines of fine printing inks, the general excellence of which is on a particularly high plane, it is difficult to single out any line or lines for particular mention. We have, however, recently received from this firm a specimen of a particularly fine sepia photogravure ink, which we understand the manufacturers have lately put on the market. To judge from the appearance of the specimen showing the result obtainable with this ink, the eventual demand for the line should be very gratifying to the makers. To meet the growing desire for a really reliable black for use on un-calendered or matt-surfaced papers,

The sharpest man has his blunt points.

DIVIDENDS AND REPORTS.

"DAILY MIRROR."—Interim dividend of 7½ per cent., less tax, on ordinary on account of year to February 28th next; payable December 1st.

NEW COMPANIES.

PUBLICATIONS OF THE EMPIRE, LTD.—Capital £20,000; printers and publishers of magazines, newspaper proprietors, etc. Private company. Subscribers: J. E. Nash and R. S. Cook.

RUBBER LATEX Co., LTD.—Nominal capital £100; general merchants, manufacturers, importers, exporters and brokers, factors of, agents for, and dealers in, rubber, rubber latex, and rubber goods of all kinds, rubber fabrics, asbestos and asbestos goods, leather and leather substitutes, linoleum and linoleum substitutes, paper, pulp and paper-making materials, card and other boards, packing cases, containers, etc. Private company. First directors: D. F. L. Zorn and J. Fairbairn. Registered office: 7 and 8, Great Winchester-street, E.C.2.

W. PATTERSON AND Co., LTD.—Capital £1,000; stationers, printers, lithographers, sundriesmen, papermakers, publishers, etc. Private company. First directors: W. B. Common and W. Patterson.

BEAL, STUTTARD AND Co., LTD.—Capital £10,000; printers, publishers and sellers of music books, and print sellers, bookbinders, art journalists, etc. Private company. First directors: E. Stuttard and Susannah Stuttard. Registered office: Oxford-circus-avenue, 231, Oxford-street, W.1.

SMITH BROTHERS (KILMARNOCK), LTD.—Capital £15,000; to acquire the business of Smith Brothers, manufacturing stationers, Kilmarnock. Private company. First directors: Mrs. M. T. Smith, A. C. Smith, and T. C. Smith. Registered office: Caxton-buildings, 62, Bank-street, Kilmarnock.

JAKEMAN AND Co. (PRINTERS), LTD.—Capital £2,000; printers, booksellers, stationers, leather merchants, jewellers, picture frame makers, photographers, glass merchants, dealers in fancy goods, etc. Private company. First directors: E. J. Thurston, W. H. Bowen, N. B. Pugh and L. G. G. James. Registered office: 8, High Town, Hereford.

ART EDITIONS, LTD.—Capital £100; fine art printers and publishers, aerographers,

newspaper proprietors, advertising agents, etc. Private company. Subscribers: J. S. Mason and W. J. Knight. Registered office: 47, Victoria-street, S.W.

CURZONS, LTD.—Capital £2,000; book-sellers, publishers, paper manufacturers, cabinet makers, manufacturers of, or dealers in, vulcanite, celluloid or metal goods, metal refiners, chemists, metallurgists, electroplaters etc. Private company. Subscribers: T. B. Wall and C. H. Chaffer. Registered office: 44, Whitechapel, Liverpool.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

PILLING AND SONS, LTD. (newspaper proprietors and publishers, etc., Manchester).—Particulars filed of £300 debentures, authorised October 4th, 1922, charged on the company's undertaking and property, present and future; the whole amount being now issued.

W. LOOKER, LTD (stationers, printers, etc.).—Particulars filed of £750 "A" and £740 8s. 8d. debenture stock, authorised September 29th, and covered by trust deed dated November 4th, 1922, charged on 8, Bridge-street, Bath, and the company's undertaking and property, present and future, including un-called capital; the amount of the present issues being £234 11s. 4d. and £740 8s. 8d. respectively. Trustees: A. Wright and A. W. Pike.

CLOISTER PRESS, LTD. (printers, stationers, etc.).—Particulars filed of £10,000 debentures, authorised November 3rd, 1922, charged on certain land and premises in Heaton Norris (ranking after a prior mortgage for £12,000); the amount of the present issue being £1,500.

PERCY JONES (TWINLOCK), LTD. (manufacturers of ledgers, loose leaf books, etc., London).—Satisfaction in full on November 15th, 1922, of debenture dated October 11th, 1921, securing all moneys due or to become due.

BANKRUPTCIES, etc.

RE D. SMITH AND SONS (Colman Smith Gabriel Smith and Mrs. Jennie Littman trading as), cardboard box manufacturers, 19 and 20, Rupert-street, Leman-street, E.C. An application for orders of discharge was made to Mr. Registrar Mellor at the London Bankruptcy Court on November 28th by these bankrupts, who failed in December, 1921. Mr. Walter Boyle, official receiver, reported that the provable debts amounted to £39,455; the assets, valued at £12,901, would probably realise £3,000. Mr. E. H. Hawkins, the trustee, had reported that the business and assets had been sold as a going concern to a limited company for £3,000, of which £500 had been received, the balance being secured by debentures. It was doubtful whether a dividend exceeding 1s. 6d. in the £ would be paid. The bankrupts Smith came to this country from Russia in 1902, and after working for one year in the cardboard box trade, they commenced business on their own account under the style of "D. Smith and Sons." The bankrupts attributed their insolvency to the contract losses, to depreciation in the value of their stock and plant, and to heavy costs of litigation. The offences alleged by the official receiver were (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) omission to keep proper books of account; (3) trading with knowledge of insolvency; (4) contributing to the bankruptcy by rash and hazardous speculations; and (5) giving an undue preference to a creditor, who was an uncle of the bankrupts. Mr. Rentoul, on behalf of the bankrupts, challenged the findings of the official receiver, and called Colman Smith to disprove them. His Honour, after hearing the evidence and counsel in support of the application, held that all five offences had been committed. The worst feature in the case was that the bankrupts

had gone out of their legitimate business to indulge in speculative dealings in cigars and shirts; and although the fall in foreign exchange was very unfortunate for them, they could not be absolved from responsibility. The discharge was suspended for three years.

Donside Paper Co., Ltd.

Worst Year of Trade Depression Safely Passed.

The eleventh annual general meeting of the Donside Paper Co., Ltd., Aberdeen, was held at the mills, Sir Frederick Becker (chairman of the company) presiding.

The chairman, in moving the adoption of the report and accounts, said that they had passed through the worst year the paper trade had ever experienced, but had come through with the goodwill of their customers. It was true that they might have made a claim upon their contractors because costs of manufacture had been higher than the price charged them, but he thought that would have been a very great mistake, and his co-directors agreed. They had, however, pulled through with a profit, and, as he had said, all their customers were their very good friends, satisfied with the services rendered them, and, as one of them said, full of gratitude for favours to come. The news trade had pulled up. Their mill was full of orders for nearly 20 weeks, and they had sent out last week 1,500 tons of paper to the Colonies, the first ship direct from Aberdeen to Australia having sailed on the previous Tuesday. He was sorry to say that the harbour authorities had charged the most unconscionable towage and expenses, which they must try to get reduced if the shipping company were to come again.

Sir Frederick moved that a dividend of 7½ per cent. be paid on the ordinary and preference shares, less tax, carrying the balance of £28,000 forward.

Mr. J. A. C. Coutts, *Aberdeen Daily Journal*, seconded the adoption of the report and accounts, and the resolution was carried unanimously.

MESSRS. MARTIN AND CLARKE, The Paper House, Joiners' Hall-buildings, Upper Thames-street, E.C.4, have just issued their December stock and price list, which is printed on an attractive line of blue card index boards. We notice that their stocks of fine azure wave banks and buff copyings have been augmented, and there is a new line of thick white Japanese copying available.

WHAT'S the matter with the world? Just the faults of you and me.

SINCE March, 1921, when the Anglo-Russian Trade Agreement was signed, Russian overseas trade began a gradual return to life after the long paralysis into which it was brought by the war and subsequent internal turmoil. The present year has seen immense development, Russia's imports for the first six months only being pretty nearly double those for the whole of the preceding year. The Russian market would seem to be worth the study of those in the printing and allied trades who have need of Continental outlets for their productions.

A British Printing Machine Factory.

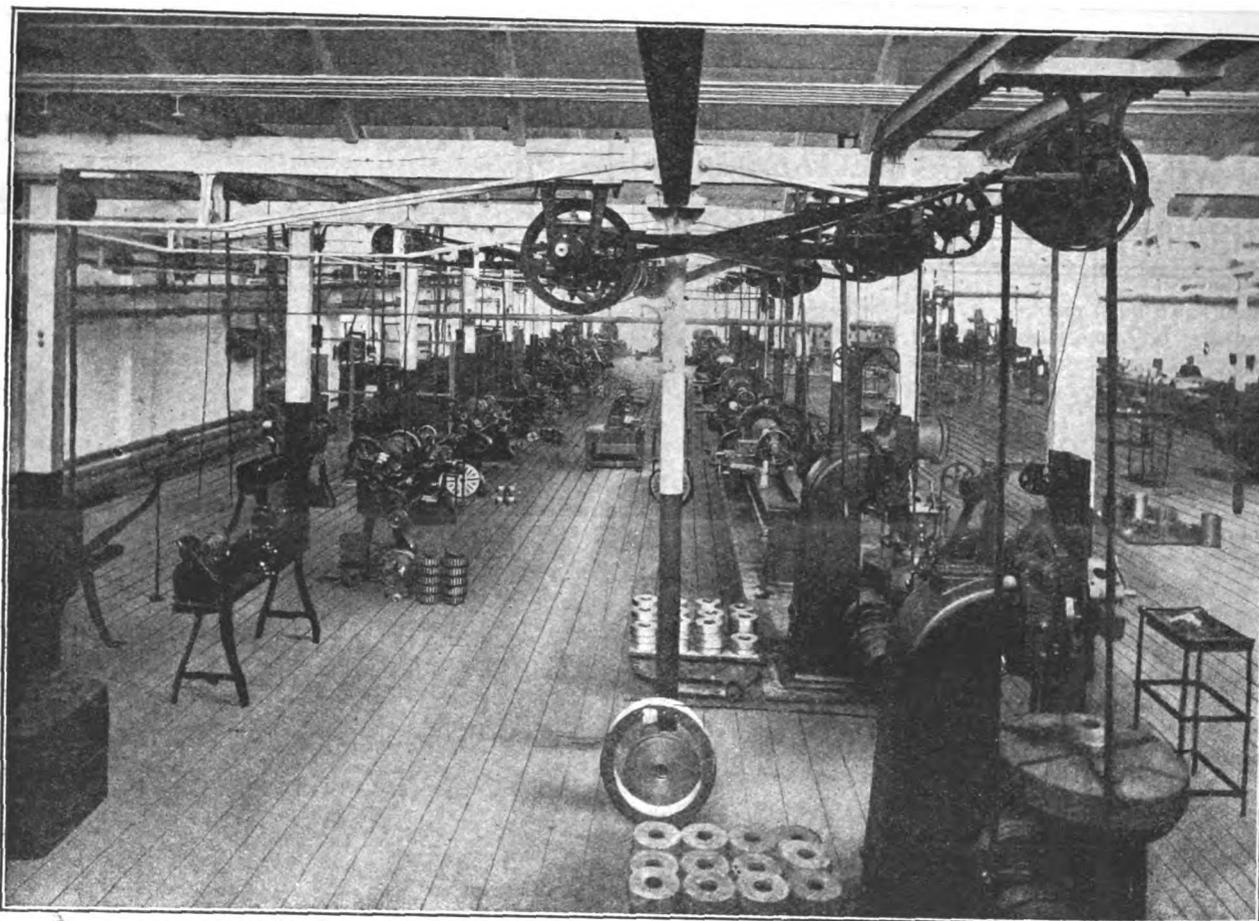

Some Particulars of the New Birkenhead Works
of the Victory-Kidder Printing Machine Co., Ltd.

In the year 1869 there was installed in the offices of the *North British Daily Mail*, Glasgow, the first machine that, at one and the same time, perfected and folded a newspaper. This machine was due to the inventive genius of the late Mr. George Ashley Wilson. In 1872 a company, having as its title, "The Victory Printing and Folding Machine Manufacturing Company" was formed to take over the business of manufacturing all rotary newspaper presses, the late Mr. G. A. Wilson being managing director of the com-

assured. The building is constructed in the form of bays of equal dimensions. The first bay provides accommodation for the private, commercial, costing and drafting offices, stores and pattern-making department. The equipment of each of these departments is of the most efficient modern type. The second bay is set apart for milling, profiling, gear generating, automatic machining, fitting and erecting. The third bay is devoted entirely to turning, planing, shaping, slotting and grinding. That very essential part of a

employed, ranging from fractional h.p. motors driving the portable drills, to the 25 h.p. motor that is responsible for the working of the 5 ft. by 5 ft. by 16 ft. stroke Stirk planer, this machine being equipped with the Lancashire drive.

The nature of the work undertaken by the firm necessitates a wide range in the dimensions of the machines employed, the lathes ranging from precision tools with 3 in. centres up to Niles Bemont Pond, 15 in. centres, and between these two sizes are included lathes of

A General View of the Victory-Kidder Machine Shop.

pany, and a very extensive and successful business was done for many years.

In 1888 the company was reconstructed under the somewhat condensed title "The Victory Web Printing Machine Company," a removal being made from the old works to larger premises on the other side of Speke-land-street, Edge Hill. Shortly before the death of the late Mr. G. A. Wilson in 1921, the company became the "Victory-Kidder Printing Machine Co., Ltd.," the addition of the name "Kidder" being occasioned by their having become the sole owners of rights and makers of the celebrated Kidder presses for the eastern hemisphere. The business has been removed from Edge Hill to Birkenhead, the demands of increasing business calling for more commodious premises.

The new works, which are situated in Laird-street, Birkenhead, are admirably placed by reason of their close proximity to both railways and docks, and not only are they very much more extensive, but have the further advantage that they can be extended when required, as the present building only occupies a portion of an extensive piece of land. The works and offices are all on the ground floor, and there is no second floor; hence easy supervision, admirable lighting and easy transport without lifting, are

modern machine shop, the tool room, is situated between the second and third bays, and is formed of expanded steel partitions, so as not to interfere with the supervision. It also makes access to the two principal machinery bays very easy. This department is very completely furnished, and almost constitutes a little factory in itself. Its equipment consists of plain and precision grinding machines by Messrs. Gisholt, Le Blond, and Alfred Herbert, also milling and turning plant and tool hardening appliances. All small tools such as milling cutters, reamers, twist drills, taps, etc., are carried on panels in special rotatable stands that operate on ball bearings. A very extensive and complete equipment of precision tools, mostly supplied by the celebrated Starrett firm, adds to the efficiency of this department, the most conspicuous feature of which is the Periodograph, an extremely ingenious mechanism that records the time expended on every single operation performed in the machine shops.

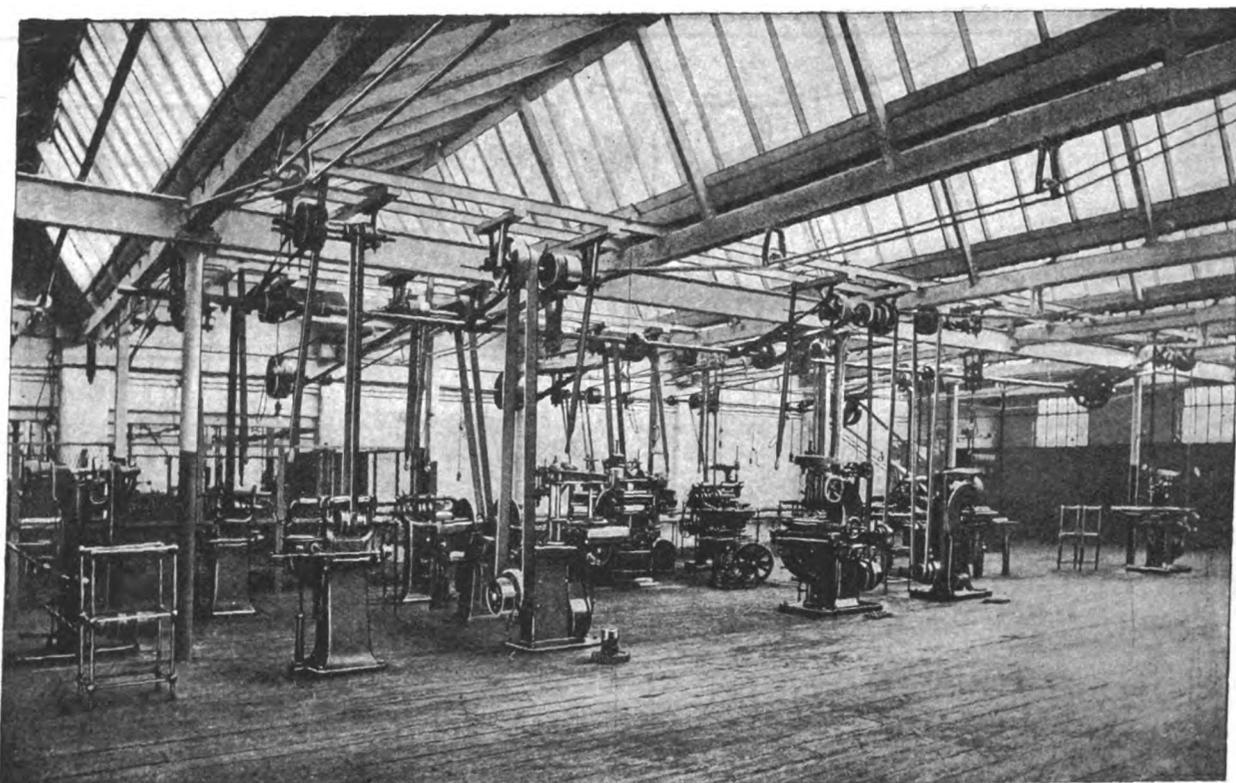

The plant is entirely driven by electric power. The lighter machines are driven in gangs from line shafting that runs in ball bearings, heavier machines being fitted with self-contained direct geared electric motors. In all, motors to the sum of about 200 h.p. are

practically all standard centres, all items of the plant being selected after very careful investigation, and only the best having been installed. The same scrupulous care has obtained in the selection of all items of the plant, not only in the matter of the machine tools and small tools, but also in the office equipments. All that is best in its respective class has been provided in each department, so that it can be said with confidence that everything has been done to ensure efficient and economical production.

The range of machines manufactured by the company is very extensive. They comprise printing machines, ranging from machines to print webs 2 in. wide up to multiple-roll high speed presses for newspapers; Kidder self-fed bed and platen presses; stereotyping plant for both curved and flat plates; slitting and re-reeling machines; paper coating machines, etc.

The Victory-Kidder Printing Machine Co., Ltd., are the sole European agents for the American Numbering Machine Co., stocks being held in Birkenhead and London.

We know that the firm gladly sends copies of their catalogue to prospective customers on application, and are at all times pleased to show interested persons over their business premises. The London office and showrooms

A Part of the Milling and Gear-Generating Shop.

are situate at 66, Houndsditch, E.1, where various stereotyping plant and special machines are demonstrated under power so that prospective customers can see the actual operation of the machines.

MESSRS. ARCHER AND LOWE, the London agents of Messrs. John Tod and Son, Ltd., have removed their offices and warehouse to more convenient premises at 237, Upper Thames-street, E.C.4.

MR. SHELDON LEICESTER (Messrs. Sheldon Leicester and Co., 12 and 13, Upper Thames-street, E.C.4) has taken into partnership Mr. Leonard B. Holman, late manager of the paper department of the Products Corporation Limited and a member of a former well-known Devonshire papermaking family. Mr. Holman is introducing to the business a number of valuable Continental mill agencies, which, combined with the agencies already held, will enable the firm to handle a very large range of papers.

ACCORDING to a Hungarian Decree of October 14th, the following goods are added to the free list and may be imported without licence: Cardboard, fine, and all cardboard painted or figured in colours with or without impressed designs; blotting paper with impressed designs; chemical paper except that prepared for photographic purposes.

An idea for Christmas is the making of dainty handkerchief sachets from crepe paper, which, it is pointed out, is not hard to stitch, and is not easily torn in stitching.

PAPER AND PRINTING TRADE PUBLICATIONS.

"**BRITISH AND COLONIAL PRINTER AND STATIONER.**" Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

The *British and Colonial Printer and Stationer*, founded in 1878, is published every Thursday. It has a large circulation among Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc., whose interests are catered for by the publication of the latest improvements in machinery, new processes, labour and time-saving devices, etc. A strong weekly feature is its Commercial Intelligence. The Quarterly Export Issues of the *British and Colonial Printer and Stationer* afford an unexcelled channel of publicity, seller being introduced to buyer with most successful results. Are you a subscriber? If not, why not? It is a good investment at a low price—13s. for one year (subscription 8s. 8d., plus 4s. 4d. postage). Send a remittance to the publishers, as above, at once.

"**THE BOOKBINDER**" forms a Monthly Section of the *British and Colonial Printer and Stationer*, and may be obtained for an annual subscription of 3s. 3d., including postage.

"**WORLD'S PAPER TRADE REVIEW.**" Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

Anyone interested in the paper market will find a fund of information in the pages of the *World's Paper Trade Review*, established in 1879. Published every Friday, it gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. It surveys the whole field of the paper and allied industries at home and abroad. Become a weekly reader by remitting 32s. 6d. (subscription 26s., plus postage 6s. 6d.), to the publishers. There is no better medium for advertisers, as, to quote one of many testimonials: "We have found your paper at every mill with whom we are doing business, both here and on the Continent."

PLANT AND MACHINERY.

- ALAUZET & DERRIEU, REUNIS**, 81, Av. Philippe Auguste, Paris. All-size rotary press.
- BENTLEY AND JACKSON, LTD.**, Lodge Bank Works, Bury, Lancs. Papermakers' engineers.
- BUMSTED AND CHANDLER**, Cannock Chase Foundry, Hednesford, Staffs. Paper bag making machinery.
- EDMUND BUSH AND SON, LTD.**, Crofton Point-road, Leeds. Hot-air drying apparatus for drying varnished and gummed sheets.
- FRANCIS J. CONNOLLY, LTD.**, Union Works, 62, Park-street, Southwark, S.E.1. Voinin perfecting offset machines.

A Fine Two-Revolution Press.

Latest "K. and B." Machine Inspected.

Many novel and advantageous features give a special interest to the "Sturm-vogel" flat-bed two-revolution press, an example of

Latest "K. and B." Two-Revolution Press: The "Sturm-vogel."

which a representative of the *British and Colonial Printer and Stationer* had the pleasure the other day of inspecting under practical working conditions in a well-known London printery. We give herewith a general illustration of this very up to date model of flat-bed efficiency.

In watching this machine at work one is struck at once by the success its designers have achieved in the direction of minimising noise and vibration. Even when running up to 2,000 per hour the press is remarkably quiet and steady. This fact is largely attributable to the special driving and reversing mechanisms adopted for the bed. The ordinary method of reciprocation is employed, a large driving wheel gearing alternately with an upper and a lower rack, both being

supported from the bed, but a special modification is adopted whereby the alternate engagement with upper and lower racks is effected not by lifting and lowering the wheel but by shifting it on its axle. This is one factor in reducing noise and vibration, a good deal of jarring occasioned by wheel engagement and disengagement being hereby obviated. The reversing arrangement is another factor, reversing being effected by slot and

crank mechanism whereby bed velocity is first reduced from normal to zero and then brought up again to normal without jarring, air springs being provided at the dead centres, two on each side of the track interconnected by a pipe. The absence of springs is a strong feature, even the actuation of the crank roller being effected in springless positive manner, a source of frequent trouble being thereby eliminated. Regulation of air compression in the air springs takes place automatically with changes of speed.

The gearing shows signs of that scientific care in production which is necessary to safe and quiet working. Gear wheels are stated to be of nickel-chrome steel, engine cut from the solid. A combination of spur and helical gearing is used.

The general build of the machine is pleasing, a noticeable feature being a departure from unnecessary weight and clumsiness. That this cutting down of mass has been effected by elimination of metal only where working stresses do not necessitate bulk would seem pretty evident from the absence of vibration. The makers claim, moreover, that their frame design is the result of a painstaking study of strains and pressures in actual printing. The general construction and methods of assembling seem to be on sound lines.

The vital matter of bearings and their lubrication has received adequate care. Double thrust ball bearings are used, and all principal bearings are fitted with ring lubrication. The supplying of oil to all the main points is facilitated by the use of central lubrication, an oil well and distributing pipes being fitted on each side of the machine.

Front delivery, printed side up, is effected by the use of travelling tape-rack, the delivery mechanism having several special features and working with great efficiency. The problem of perfect register has also been satisfactorily tackled, great care and ingenuity being bestowed upon this part of the press.

The inking apparatus, like many other details of the machine, has several novel points, and the experienced user of two-revolution presses will notice a number of details to interest and please him.

We inspected the "Sturm-vogel" press by courtesy of Messrs. S. A. P., Limited (Salmon's Automatic Patents), the printers' engineers and factors of No. 1, Gough-square, E.C.4, who are willing, we understand, to arrange for any responsible printer who desires so to do to see one of these machines at work under normal everyday conditions.

Messrs. S. A. P., Limited are the sole agents in the United Kingdom for this as for other "K. and B." presses.

Credit must be given where credit is due, even if the machinery inspected hails from Germany, and, after all, the firm of Koenig & Bauer, of Würzburg, who make the "Sturm-vogel," had long before the war built their name so creditably into printing trade history that it is now ineradicable.

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

THURSDAY, DECEMBER 7, 1922.

About this Journal.

IN steadily maintaining our efforts to serve the printing and allied trades with prompt and adequate news of occurrences of interest to the industry and with up-to-date information of technical and manufacturing developments, we are encouraged now and then with tokens of approval which show that the trade appreciates the improving service rendered by the *British and Colonial Printer and Stationer*. The latest such testimony catches our eye in "Notes for Buyers," the neat little monthly house organ of Messrs Spicers, Limited, the great paper house which has branches throughout the world. In the current issue of that publication the anonymous writer of "Hints for Printers" (whose identity is unknown to us) makes a reference to ourselves which is all the more welcome in that it is entirely unsolicited and unexpected. To those who grudge the small subscription that will bring our journal to their door week by week, we venture to pass on the paragraph to which we refer. It reads as follows: "By the way do you take in the weekly journal of the craft, the 'British and Colonial Printer'?" I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

London Wage Struggle Ending.

THE results of the resumed wages negotiations in London, as reported on another page, suggest that a welcome end is at last to be put to the unfortunate struggle which has for so long been disturbing the London trade. Final settlement, it will be noted, still depends upon further steps which are being taken, but the hopes of peace may now be regarded as thoroughly well founded. We gather that a feature of the negotiations has been the fair and reasonable attitude adopted

by the men's leaders, and we feel that great advances would be made towards future harmony in the industry if it were possible to enable the union members as a whole to share the full realisation of the pros and cons of trade questions which their leaders possess. Much would be done in this direction if it were possible to arrange for occasional mass meetings wherein the rank and file of the employers and the rank and file of the unions could commingle to hear trade problems debated, so that each side might learn a little more of the "other fellow's" anxieties, and so co-operate more understandingly and smoothly.

Firm Paper Prices.

THE possibility of a rising paper market is exercising the minds of buyers at the present moment. Everywhere it is to be seen that prices are as firm as a rock. Reports from all over the country demonstrate that the papermaking industry is being conducted without profit in many cases. Rumour has it that the mills must very shortly advance their figures. Now is the time, then, for the paper user to regain fully the confidence in paper stock which he lost over two years ago. Whether paper will go up or not time will tell; but it is certain beyond the shadow of a doubt that it will not go down yet awhile.

The Post Office and Commerce.

THE Post Office Regulations require very drastic overhauling if the new Government is to experience that tranquillity which is proclaimed as its chief desire and policy. So far as the paper and print industry is concerned, it would be entirely detrimental to its interests, which are those of the country at large, if it calmly accepted the existing state of things. As if the present hampering of trade recovery by burdensome postal regulations and restrictions were not sufficient, it has been deemed necessary that loose advertisement insets as used in publications are to be charged at ordinary letter or parcel rate. In the effort to secure revenue by any conceivable method, the Postal Service has become so complex that its own officials do not properly understand the regulations. Surcharges are the vexatious order of the day; the routine of many large houses is upset by time restrictions on halfpenny post. Publishers are penalised in their publicity propaganda and hampered in the production of their journals by restrictions on loose contents and the cost of postage. The picture post card industry is held back by indecision on the phrasing allowance. Far from tranquillity, it behoves every business house in the country to make its protest felt and heard by the new Post-master-General.

FREEMASONRY.—Gallery Lodge, No. 1,928 (the English "Press" Lodge), held its annual meeting on Saturday at the Restaurant Frascati, Oxford-street, when Mr. W. E. Gilliland (Past Master of the Musgrave Lodge, Hampton Court), was installed Master by his predecessor, Mr. A. W. Morgan, the three Grand Officers of the lodge—Sir Alfred Robbins, Mr. John Martin, and Mr. J. Denyer Hand—taking part in the ceremony. The following were appointed the officers:—Messrs. W. B. Ritchie and E. V. Waddell, Wardens; F. W. Brodie, L.R., treasurer; S. G. Smeed, secretary; John Martin, P.A.G.D.C., Director of Ceremonies; A. E. Jackson and J. E. Rose, Deacons; Sir Alfred Robbins, President of the Board of General Purposes, Almoner; R. Macintyre, Assistant Director of Ceremonies; A. F. Thorpe, assistant secretary; E. H. Rann, Inner Guard; G. M. Henderson, R. E. Neale, Alan Pitt Robbins, Clifton Robbins, C. G. L. Du Cann, J. Parker Heyes, and A. H. Fletcher, Stewards; H. E. Mephum, Tyler.

COMPARATIVE figures in roubles of 1922 currency show the price of paper in Russia to have increased as follows, the quantity being that which cost one rouble in 1913: September 1st, 420; September 21st, 480; October 1st, 532; October 11th, 647.

Personal.

At the annual dinner of the London District of the Institute of Journalists, held at the Hotel Cecil on Saturday evening, Mr. William Latey, chairman of the district, presided, and amongst the speakers were the Lord Chief Justice (Lord Hewart), Mr. T. P. O'Connor, M.P., Mr. G. K. Chesterton, and Mr. J. A. Spender. The American Ambassador, Mr. George Harvey, was unavoidably prevented from attending.

DURING the evening the members elected Lord Hewart an honorary member of the Institute.

MR. J. T. GREIN, the dramatic critic was entertained to dinner at the Hotel Cecil on Sunday, when the company which assembled in his honour numbered, according to the chairman, Mr. T. P. O'Connor, M.P., no fewer than 400 people drawn from the Press, the stage, playgoers, and the commercial world.

It is understood that Mr. Wickham Steed has resigned his position as editor of *The Times*, and that, in response to the request of the directors, Mr. Geoffrey Dawson, who formerly occupied the position, will resume it.

MR. E. C. BATEMAN, M.B.E., Deputy-Director of Printing and Binding, H.M. Stationery Office, delivered an interesting lecture entitled "A Visit to Germany" at the monthly meeting of the Printing, Bookbinding and Kindred Trades Overseers' Association on Tuesday evening.

MR. F. HECKFORD, chief chemist to John Dickinson and Co., gave a lecture on paper-making at the University College, Nottingham, last week. The discourse was much appreciated.

MR. JAMES FORMAN presided, and described the lecture as the first public step in the scheme for promoting technical education in the local printing industry.

MR. BERNARD WELLER, editor of the *Stage*, has been elected chairman of the London District of the Institute of Journalists.

MR. CHARLES W. COOK, of the commercial staff of the *Durham Advertiser* and *Durham Chronicle*, has been presented with engraved gold cuff-links by the staffs of these papers on leaving to take up an appointment on the *Islington Gazette*.

MR. T. MATTHEWS, deputy chief of the stereotyping department of the *Yorkshire Post* for many years, has retired from active work, on a pension granted by the proprietors of that journal and has been the recipient of a testimonial subscribed for by the stereotyping and other staffs of the *Yorkshire Post*.

MR. ROLLO OGDEN, a member of the *New York Times* editorial staff, and former editor-in-chief of the *New York Evening Post*, has been appointed editor of the *New York Times* in succession to the late Charles R. Miller.

THE life-story of Mr. Warren G. Harding, printer-President of the United States, has just been published by Darrance and Co., of Philadelphia. The book is by Sherman A. Cunes, and bears the title "From Printer to President."

WE regret to learn that Lieut.-Col. J. R. Truscott, president of the London Master Printers' Association, has suffered bereavement by the death of his wife, who passed away on Saturday at Cobham, Surrey, aged 41. The funeral which was private, took place on Saturday, the London Master Printers' Association sending a wreath. Col. Truscott was of course unable to attend the conference on Monday between the L.M.P.A. and the National Union of Paper Workers, and we understand that when news of the bereavement was conveyed to the conference, Mr. Larcey and his colleagues cordially associated themselves with a motion expressing sympathy with Col. Truscott.

London Wages Reduction.

At a conference on Friday evening, convened by the Ministry of Labour, it was decided that negotiations between the L.M.P.A. and the Association of Correctors of the Press, the National Society of Operative Printers and Assistants and the National Union of Paper Workers (London Warehousemen) should be resumed. Resumed discussions resulted in the Correctors of the Press withdrawing their opposition to the reduction due this week, and at a conference on Monday with the Paper Workers (London Warehousemen) provisional agreement was reached, to await confirmation on both sides. In the case of the National Society of Operative Printers and Assistants a conference was held on Tuesday, and as a result the union Executive agreed to the proposed reductions, subject to ballot of the membership, which is accordingly proceeding, it being understood that the reduction proposals will apply retrospectively to the present week.

The London Master Printers' Association has circularised its members instructing them that, as already advised, a general wage reduction so far as London unions are concerned is to be made on the pay-day in the week ending December 9th to the amount of 4s. from the adult male members of the following unions: Amalgamated Association of Pressmen, Amalgamated Typefounders Trade Society, Association of Correctors of the Press, London Society of Compositors (Hand Compositors), London Warehousemen's Branch of the Paper Workers Union, National Society of Operative Printers and Assistants, Platen Printing Machine Minders Society, Printing Machine Managers Trade Society. Women receiving men's rates to have the same reduction.

The reduction for machine compositors will be 3s. and for male junior members of any of the above unions 2s. Linotype piece rate to be reduced from 6d. to 5½d.

The circular states that in the event of any resistance being offered by any of the above unions the agreed rate for that union will be automatically cancelled, so far as public contracts are concerned, until a settlement is reached.

A leaflet is being circulated giving the new minimum rates payable to members of the Printing Machine Managers Trade Society on the above pay-day, from which the above-mentioned 4s. has already been deducted.

A further reduction of wages is to be made on the pay-day in the week ending January 6th, 1923.

Government Printing.

Questions in the House of Commons.

Lieut.-Colonel Spender Clay asked the Chancellor of the Exchequer in the House of Commons last week whether his attention had been drawn to the losses in State printing, particularly at the Harrow and Dugdale-street works; and whether, in the interests of the taxpayer, he will, in the future, ask for tenders in open competition for State printing?

Mr. Baldwin replied: I am aware that the accounts of the Harrow and Dugdale-street works showed a loss in the year to March 31st, 1921, but the other State printing works showed a profit. The Dugdale-street works, which also in former years had shown a profit, were closed on March 31st, 1921. The Harrow works are being run for an experimental period of three years and the question of their retention will come up for consideration next year. I may say, however, that the latest figures indicate that these works are now being run at a profit. Roughly two-thirds of the Government printing is being executed by private firms.

Mr. Harry Becker followed this up on Thursday last week by asking the Chancellor of the Exchequer whether, seeing the loss made by the printing departments of His Majesty's Stationery Office last year, it is his intention to close down the Government printing works at Harrow?

The Chancellor referred the hon. member to the answer given to Lieut.-Colonel Spender Clay.

Stereotypers' Auxiliary Concert.

Conspicuous success marked the bohemian concert held by the Electrotypers' and Stereotypers' Auxiliary on Monday evening at Anderton's Hotel, Fleet-street, E.C.4. Mr. W. J. Light, of the well-known firm of Wm. J. Light and Co., Ltd., occupied the chair, and was supported by a large gathering of friends. Among those present were:—Mr. R. E. Paine (*Westminster Gazette*), O. V. Hayward (secretary, W. J. Light and Co., Ltd.), Mr. D. E. Reeves (*Shoe and Leather News*), Mr. G. W. Sharvell (Amalgamated Press), Mr. H. Clark (*Daily Sketch*), Mr. Field (R. Hoe and Co.), A. Chadwell (United Newspapers), H. Ling (Sun Paper Mill), A. Wood (Odham's, Ltd.), Mr. W. C. Warren and Mr. T. Middleton (secretary and assistant, National Society of Electrotypers and Stereotypers), W. Bullett (W. H. Walbrook and Co., Ltd.), and W. H. Crosby.

Mr. Warren, in proposing a vote of thanks to the chairman, said it was a pleasing task to thank Mr. Light on behalf of the committee for the magnificent result of his effort, and for the willing way their chairman had come forward that night. The results of Mr. Light's efforts would help them very materially in founding the sixth pension. They were putting up four candidates at the next election in March, and Mr. Warren appealed to the trade for their support.

The vote of thanks was heartily accorded, accompanied by the singing of "For He's a Jolly Good Fellow."

In returning thanks Mr. Light said he felt it a great honour and privilege to occupy the chair. If it ever fell to his lot to take the chair on a future occasion he hoped to do even better than he had done that evening. He announced his plate as amounting to £120. (Cheers.)

The programme—occupying four hours to render—was an exceptionally good one, the artistes being as follows:—Mr. George Bostock (tenor), Miss Jessie Wood, Miss Sylvia Vyne, Miss Elsie Lisle (sopranos), Miss Alice Morrell, Miss Valerie Vyne, Miss Muriel Macgregor, Miss Evelyn Clifford (contraltos), Mr. Arthur Sinclair (entertainer), Mr. Fred Temple, Mr. Will Deller, Mr. Wal Barker (comedians), Mr. Chas. Lewis (novelty entertainer), Delarchet (violinello), Miss Dorothy Varick (disease), Mr. Courtney Mayverne (humorist), Miss Helena Millais (actress entertainer), Mr. Robert Pitt and Mr. Langton Marks (entertainers), Miss Edith Penville (solo flautist), Mr. Middleton Woods (entertainer), Mr. John Humphreys (baritone) and Mr. Chas. Hardy (accompanist).

Mr. W. E. Condy (musical director) and Mr. George J. Harrison, who had charge of the arrangement of the concert, carried out their duties in an excellent manner.

During the evening Mr. Light presented the medals and photographs to the Stereotypers' football team, who were the winners in the competition for the Overseers' Cup.

A most enjoyable evening's entertainment was brought to a close by the singing of the National Anthem.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A firm of manufacturers' agents in Vancouver wish to secure the representation of United Kingdom manufacturers of cutlery, aluminium ware, coloured window transparencies (paper). (Reference, Canadian Trade Commissioner's Office, 73, Basinghall-street, London, E.C.2.)

SOUTH AFRICA.

An agent established in Johannesburg is desirous of securing the representation of a United Kingdom firm manufacturing stationery, notepaper and envelopes. He is stated to have had considerable experience in handling these lines on the South African market. (Reference No. 571.)

SWITZERLAND.

A firm, established in Neuchatel, is desirous of securing the representation of United Kingdom manufacturers of stationery and fancy leather goods. Correspondence should be in French. (Reference No. 550.)

Trade Notes.

PARTNERSHIPS DISSOLVED.—Amongst the week's partnerships dissolved are those between Richard James Miller Jamieson and James Carlisle Haimes, printers, 1A, St. Ann's-terrace, St. John's-wood, N.W.; Frederick Emmott and John Emmott, printers, 36, Ellesmere-street, Manchester.

STANDARD PRICE UPHOLD.—At the City of London Court last week Messrs. Howes and Co., Ltd., 2, Gresham-buildings, Basinghall-street, sued Mr. S. Cotton, Leslie Works, Pratt-street, Lambeth, for £1 17s. for printing work done and material supplied. Plaintiffs' representative said that an order was received. A proof was submitted and approved. Defendant said the plaintiffs' account was far too high. Plaintiffs' representative said they were members of the London Master Printers' Association. Its standard scale of charge was rigidly adhered to. The Registrar decided for plaintiffs for £1 5s.

ELECTION PRINTING PROSECUTION.—On Friday last, at the Gloucester Police Court, Mr. Edward A. Ind, printer, of Northgate-street, was summoned by the agent to the Labour candidate, Mr. Morgan Philips Price, for having unlawfully incurred expenses in publishing a handbill headed "Some notes on the candidature of M.P. Price," for the purpose of promoting or procuring the election of a candidate without being authorised in writing by the election agent of such candidate. It was stated that this was the first case of its kind under Section 34 of the Representation of the People Act, 1918. For the defence it was urged that there was no case for a jury, the voters not being appealed to for or against any candidate, and no expense was incurred. The defendant was committed to the assizes, bail being granted.

LONDON SCHOOL OF PRINTING AND KINDRED TRADES.—Representatives of the technical Press on Tuesday afternoon made an inspection of the new L.C.C. school in Stamford-street. They were escorted round the premises by Lord Riddell (president), Mr. T. E. Naylor (vice-chairman), and Mr. J. R. Riddell (the principal). The various departments, which are well equipped, thanks to the generosity of the manufacturers, were seen in operation, the larger accommodation allowing of the addition of two new sections. A description of the School will appear in our next issue.

LIMITATION OF APPRENTICES.—Agreement has just been reached between the London Master Printers' Association and the London Society of Compositors on conditions identical with those of the provisional agreement drafted a year ago. By the new agreement the proportion of apprentices shall be one apprentice to four journeymen, provided that one apprentice shall be allowed for any number of journeymen up to seven; two apprentices for eight journeymen; and so on up to ten apprentices for forty journeymen. In offices where more than forty journeymen are employed, one additional apprentice shall be allowed for each further eight journeymen employed. This agreement is operative from December 4th, 1922, until December 31st, 1924, both dates inclusive.

The *Aberdeen Free Press* has amalgamated with the *Aberdeen Journal*, the joint issue bearing the title *Aberdeen Press and Journal*

The Association of British Manufacturers of Machinery for the Printing and Allied Trades has removed to 6, Holborn-viaduct, E.C.1, to which address all communications should be sent.

The Electrotypers and Stereotypers Overseers' Association will hold their December meeting on Tuesday next in view of their usual meeting night (the third Tuesday in the month) being so close to Christmas.

MR. PATRICK DEMPSEY, leader of the Nationalist Party in Belfast and chairman of the *Irish News* died on Monday.

THE death has occurred of Mr. Herbert E. Jewell, who passed away on Sunday in his 66th year. For many years he was associated with the *Morning Post*, the *Globe*, and the Cricket Reporting Agency.

ON Wednesday evening, at the Maison de la Presse, Brussels, a memorial to Belgian journalists killed in the Great War was to be inaugurated in the presence of the Minister of National Defence.

DAMAGE to the extent of £50,000 was caused by fire on the premises of Messrs. Pemberton, paper manufacturers and paper bag makers at Gateshead on Saturday night.

ROCHDALE PRINTERS SOCIAL. — On Saturday last the Rochdale and District Printing and Kindred Trades Guild held a very successful whist drive and dance, there being over 250 members and friends present.

CORK PRINTERS' UNEMPLOYMENT.—During the past few weeks strong representations have been made by Cork members of the Irish Government—in view of the serious amount of unemployment prevailing in the local printing trade—to allocate a share of the Government printing to that city. President Coggrave, who has replied to the request, states that there are already two Cork firms holding contracts for printing, but that every encouragement will be given to other firms who tender for such contracts.

AUSTRALIA WANTS PRINTERS.—A large firm of paper exporters write us from their London headquarters: "We have received to-day a cable from our Melbourne House as follows: 'Shortage here of printers' machinists, compositors and linotype operators; what are prospects obtaining suitable men your side?' As you can suppose, it will be very difficult for us to offer an opinion. Nothing is said as regards wages, or terms; as you can see, it is simply a general intimation and a question. No doubt our friends are acting on behalf of the trade generally in Australia."

CAPE TECHNICAL INSTITUTE.—Equipment of the printing school section of the Cape Technical Institute is proceeding, and an interesting gift has been made by Messrs. Stephenson, Blake and Co., Ltd., the London firm of typefounders. This takes the form of £100 worth of material, which has been selected by the Institute authorities.

Trade Union Matters.

MR. GEORGE PENNEY, of Stafford, answered on Thursday last at the Tower Bridge Court a summons for "wilfully withholding the sum of £93 12s. 6½d., the moneys of trustees of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers." Penney's solicitor (who said that his client objected to the word "misappropriation" being used in connection with the case) claimed that the Court had no jurisdiction, because Penney had agreed with his local branch secretary to repay the money at the rate of 10s. a week. It was eventually decided that Penney should repay by instalments of 12s. 6d. a week, Mr. Slesser (for the union) remarking: "He must not forget that, under the Act, imprisonment is the penalty for default in the payment of these instalments."

UNEMPLOYMENT among L.S.C. members showed a steady diminution throughout the month of November. According to the *London Typographical Journal*, there were on November 4th, 1,119 members unemployed, 1,125 on November 11th, 1,101 on November 18th, and 1,087 on November 25th. This figure (1,087) also records a lessening of unemployment compared with November 25th last year, when there were 1,234 signing the books, but it is still a long way in excess of the 578 for the corresponding week of 1920.

THE Executive Council of the Scottish Typographical Association are taking a ballot of the membership on a proposal from the Edinburgh branch that all movements for alterations of hours or wages be carried out through the medium of the Executive Committee of the Printing and Kindred Trades Federation.

REPRESENTATIONS are being made to the Executive Council of the Typographical Association to sanction a special delegate meeting of the Association to deal with matters arising out of the recent strike. The officials of the National News and Operators' Guild are circularising their various branches to press for this course, with the object of bringing forward at such meeting proposals for dividing the Typographical Association into two distinct sections—one for news and one for jobbing workers, so that all questions directly affecting such sections could be negotiated separately with the respective bodies of employers.

Substantial Reduction in the Cost of Working

saving of time, labour, fuel, metal and space and improvement in the quality of the plates produced, are the results of the installation of a

Winkler Automatic Casting Machine

FOR POWER OR HAND OPERATION.

NO TAIL,
NO SHAVING,
NO TRIMMING.

SWISS MANUFACTURE
GUARANTEED.

HARD FACTS:

THREE PLATES PER MINUTE FROM EACH BOX.

The cast plates are absolutely ready for the rotary and need no trimming or shaving.

ONLY ONE OPERATOR NECESSARY.

With other automatic systems *at least 3-4 men* are required. A further saving of labour results from the fact that our plates do not require trimming, shaving or hand-finishing.

CONSUMPTION OF FUEL IS REDUCED BY 50-75 PER CENT.

because the necessary capacity of the metal pot is considerably smaller, and the casting temperature lower, than with other systems.

CONSIDERABLY LESS LOSS OF METAL,

because the plates are cast without a "tail," so that *less than 50 per cent.* of the metal required by other systems need be melted, and the same metal is not remelted so often. The metal pot is covered, thus minimizing oxidation and radiation of heat. The lower casting temperature reduces the volatilization of tin and antimony to a minimum.

PERFECTLY TRUE AND SOLID PLATES GUARANTEED.

Overseas Movements of Printers' Supplies.

British Export Figures for the First Nine Months of the Year Augur a Brighter Future for Overseas Business.

The statistics relating to the exports from this country of materials coming within the scope of the printing and allied trades for the first nine months of the year disclose, as might have been anticipated, an improvement on recent years. The latest figures indicate that United Kingdom exports in this class of goods show more marked improvement than is seen in British exports as a whole, there having been a steady revival of trade in most of the goods in which the printer is particularly interested. The following notes, which have been compiled from the Board of Trade Returns, deal with the period up to the end of the first three quarters of the year, and it will be found that in the majority of the products mentioned there is shown an increase on last year's trading, as well as a steady, consistent approach to the level of the nine months of 1920.

Boards.

The exports of boards—which comprise millboard, strawboard and cardboard—during the first three quarters of the year were not quite so pronounced as in the corresponding periods of 1920 and 1921. However, recent months' trading shows exports in this commodity to have an improving tendency. During January to September the exports stood at 56,911 cwts. (£128,806), compared with 62,683 cwts. (£205,443) last year (nine months) and 60,545 cwts. (£231,417) in a similar period two years ago.

Boxes and Cartons.

The cardboard box and carton, now recognised as possessing so many features of utility in many branches of industry, forms an important item in the British paper and cardboard export list. The shipments during the first nine months of the year amounted to 12,572 cwts. (£69,662), as against 14,562 cwts. (£105,158) last year and 17,775 cwts. (£126,198) in the corresponding period of 1920.

Coated Papers.

The exports during the first nine months of the year of coated papers show an appreciable improvement compared with a similar period last year, although to reach the quantity exported in the nine months of 1920 there is still considerable leeway to be made up. Printed and embossed paper hangings despatched overseas during January to September amounted to 47,570 cwts. (£278,814), as contrasted with the less amount of 32,881 cwts. (£266,883) in the corresponding nine months of the previous year, and 117,794 cwts. (£626,992) in January to September, 1920.

Othersorts, which include waterproof wrappings, roofing paper and sensitised photographic paper, were also sent overseas to a considerable extent. For the present year the exports stood at 20,752 cwts. (£181,890) against 18,395 cwts. (£228,440) in the corresponding nine months last year and 25,833 cwts. (£305,208) in January to September, 1920.

Packings and Wrappings.

Exports under the heading of "packings and wrappings" show a marked development in recent months. During the period under review (January to September) the export of this class of commodity constituted the second largest item in the British paper and cardboard export list. For the first nine months of the year the total despatched overseas stood at 189,248 cwts. (of the value of £209,195), against 98,309 cwts. (£250,733) last year, and 279,498 cwts. (£603,428) in the corresponding nine months of 1920.

Paper Bags.

The rapid developments taking place in this country in the manufacture of paper bag-making machinery has recently given an impetus to the demand for paper bags for overseas markets. In the first nine months of the year shipments under this heading reached 13,083 cwts. (of the value of £46,123), showing an increase compared with the 11,113 cwts. (£62,844) of last year (January to September), but revealing a falling off compared with the 23,474 cwts. (£98,055), for the corresponding nine months two years ago.

Playing Cards.

With commendable enterprise British playing card manufacturers are making every effort to secure foreign and colonial markets, and with the comprehensive varieties of this class of goods that are now placed on the market an even bigger overseas demand is anticipated. Shipments of playing cards during January to September amounted to 1,608 cwts. (60,174 dozen packs) of the value of £32,013, as against 757 cwts. (27,514 dozen packs), £18,395 in the previous year, and 1,300 cwts. (55,111 dozen packs), £29,897, in the similar period in 1920.

Printed Books.

Trade in the export of printed books continues to be an important item comprised in the various classes of goods sent overseas. Twelve months ago (January to September) these exports were larger than for the period under review, although trade during recent months shows a distinct improvement. Consignments of printed books shipped overseas during the nine months reached 199,923 cwts. (of the value of £2,311,279), compared with 209,532 cwts. (£2,625,650) last year, and 211,716 cwts. (£2,700,899) in January to September, 1920.

Printing Papers.

The exports of printing papers (not coated) during the first three quarters of the year have been eminently satisfactory, amounting as they do to 947,137 cwts. of the value of £1,720,391. These exports not only represent an increase in quantity of 381,814 cwts. over the amount despatched abroad during the corresponding period last year, but constitute the big proportion of 59.8 per cent. of the quantity of the total exports of British paper and cardboard for the first nine months of the present year. It is evident that the large volume of trade now being done in this branch of British manufacture is due to the direct effect of the encouragement given to home producers by overseas possessions. With reference to the markets to which British printing papers were despatched, it is interesting to notice that of the total shipments no less than 685,782 cwts. were absorbed by Colonial markets and 261,355 cwts. by foreign countries. The demands made by various British possessions may be indicated as follows:—

Australia, by far the largest buyer, took the huge amount of 390,351 cwts. during January to September, compared with 219,156 cwts. in the corresponding period last year and only 86,308 cwts. in the 1920 period.

British India represented the next largest buyer, whose requirements amounted to 119,481 cwts., a figure largely in excess of the 74,165 cwts. last year, but below the 190,688 cwts. imported in January to September, 1920.

New Zealand occupies the next position with 55,627 cwts., recording increases contrasted with the 37,977 cwts. last year and also with the 24,034 cwts. taken by the Colony in the first nine months of 1920.

Canada took 11,370 cwts., against only 1,881 cwts. last year and 1,180 cwts. in the nine months of the preceding year.

British South Africa, Ceylon, and the Straits Settlements, however, have each made smaller demands, as shown by the following comparisons for the three nine-monthly periods: British South Africa, 46,473 cwts. (1922), 57,755 cwts. (1921), 47,411 cwts. (1920); Ceylon, 9,000 cwts. (1922), 12,287 cwts. (1921), 15,272 cwts. (1920); Straits Settlements, 7,814 cwts. (1922), 8,245 cwts. (1921), 9,741 cwts. (1920).

Printing Type.

The statistics relating to the shipments of British printing type for the first nine months of the present year show a decline to have taken place compared with the two corresponding periods of 1921 and 1920. The quantity sent overseas during January to September stood at 129 tons (£43,748), against the larger figures of 233 tons (£86,864) in the corresponding period last year and 195 tons (£56,599) in January to September two years ago.

Stationery Exports.

The export trade in envelopes—which does not include boxed stationery—evidences an improvement during recent months. Considerably more enterprise, however, must be displayed by British manufacturers of these almost ubiquitous adjuncts to commercial activity before business becomes again what it was in 1920. During January to September exports of envelopes amounted to 27,902 cwts. (£142,471), as against 19,124 cwts. (£193,122) last year and 40,289 cwts. (£286,736) in the nine months of the previous year.

Other sorts despatched overseas during the first three-quarters of the year stood at 92,084 cwts. (£1,076,116) contrasted with 100,173 cwts. (£1,504,064) in the corresponding period last year and 116,221 cwts. (£1,415,948) in the nine months of 1920.

Tissues.

The excellent quality of the tissues produced by British manufacturers has a world-wide reputation for adaptability and service, and although a slight decrease is shown in the demand for this class of production a fairly extensive business has been transacted. The quantity exported during January to September stands at 8,288 cwts. (£85,152), contrasted with 8,314 cwts. (£127,664) last year (nine months) and 9,628 cwts. (£120,548) in the corresponding period of 1920.

Writing Papers.

The exports of writing paper in large sheets during the first nine months of the year—amounting to 115,860 cwts., of the value of £413,028—mark an improvement of 14,346 cwts. on the corresponding period of last year, but are lower to the extent of 4,533 cwts. compared with January to September, 1920. Of the total quantity exported during the nine months it is satisfactory to note that a much bigger proportion went to the Colonies than to foreign countries, the actual amount going to the former being 91,272 cwts. and to the latter 24,588 cwts. The shipments received by the different colonies during the three nine-monthly periods were as follows:—

Australia took 48,294 cwts. in January to September, against 26,210 last year and 31,075 cwts. in the 1920 period.

British India, 23,032 cwts., against 25,671 cwts. and 47,592 cwts.

New Zealand's demands amounted to 6,927 cwts., compared with 11,180 cwts. in 1921 and 9,315 cwts. in the corresponding nine months of 1920.

British South Africa took 3,845 cwts., contrasted with 6,588 cwts. in 1921 (nine months) and 5,614 cwts. in 1920.

Straits Settlements, 1,444 cwts. (1922); 2,222 cwts. (1921), 3,901 cwts. (1920). Ceylon, 1,410 cwts. (1922); 1,113 cwts. (1921); 3,002 cwts. (1920). Canada, 710 cwts. (1922); 944 cwts. (1921); 435 cwts. (1920).

Paper in Siam.

The needs of Siam in paper, paper goods and stationery from foreign countries have remained fairly steady during the past seven or eight years. The constant demand of the country for paper and paper products is due to there being not a single paper mill in the country, the continued progress of which in education and business methods contributes towards the maintenance of the demand for the product.

Paper imports into the country are classified under three heads. There is, firstly, unprinted paper; secondly, books, music and other printed matter; and thirdly, paper manufactures, such as boxes, cartons, etc. The total value of Siam's paper imports in 1921 was approximately £200,000. Considerable advance has been made in imports of paper into Siam from the United States, which may be considered as being entirely due to the fact that United States commercial travellers now visit Siam fairly regularly and endeavour to supply the classes of paper goods that the market requires.

Printing for All the World.

The Oldest Banknote Printery.

The old firm now known as Perkins, Bacon and Co., Ltd., of Southwark-bridge-buildings, London, S.E., attained the venerable age of

the same predicament the next year, and the next, and the celebration has not therefore yet taken place. As, however, the date synchronised with the completion by Mr. J. Dunbar Heath, grandson of one of the founders, of thirty years' service as managing director, on the resumption last year of the annual dinners, discontinued during the war, the employees took the opportunity to present him with a gold watch as a token of

house in the kingdom, the firm seems to have entered into another period of youth, tempered with the experience of age. As soon as the difficulties, due to the war, of obtaining machinery disappeared, machines of the most up-to-date pattern were installed, the factory re-arranged, and brought thoroughly up to date, so that now every description of its special work, such as banknotes, postage stamps, cheques, bonds and all security documents, can be turned out in the best manner and in the quickest possible time.

Needless to say, this has resulted in the factory being nearly always filled to its utmost capacity, and at times want of space is severely felt. No doubt many printers will envy such a condition as this.

Trade with South America.

The firm's customers are from all parts of the world, and it is lately resuming the position in South American trade which it occupied some sixty years ago, when nearly all the republics then existing were numbered among its customers. The work now sent to that part of the world is very different from what it was then, but the base is the same, namely, the Perkins process, which Jacob Perkins introduced into this country when he came over in 1819 with a view to obtaining the printing of the Bank of England notes. As is well known, he failed to obtain the contract, but set up a business as banknote engravers with Colonel Fairman, the engraver, Serjeant Heath, and his half-brother Charles Heath, engraver to the King, who 22 years later was responsible for the engraving of the Queen's head on the first British postage stamps.

These stamps were printed by the firm for the British Government for 40 years, and it is admitted by philatelists all over the world that no stamp has ever equalled the first Queen's head for its simple beauty and appropriateness for the purpose for which it was intended.

Stamps for Various Countries.

The firm now prints postage stamps in many varieties for various countries, but always takes as its standard of excellence the old original penny.

The personnel of the management has recently been increased by the addition of several members of Mr. Heath's family, and a step forward towards modern ideas of big combinations has been taken by the association, at the beginning of this year, with Messrs. Harrison and Sons, Ltd., the well-known letterpress printers, of St. Martin's-lane, who are now printing by the surface process the British stamps which Perkins, Bacons and Co. printed from plate over 40 years ago—a very appropriate association, which should greatly add to the strength and prosperity of both these well-known firms.

Sale of Paper Mills in France.

The mills of the Papeteries Réunies (Couprie) were recently put up for sale with the following results:—The Prieur mill at Brive, to Messrs. Sutre for 900,000 francs; two Bouragneuf mills (Creuse), Messrs. Sutre, 425,000 francs; the Bouvie mill (Corrène), M. Bohet, 510,000 francs; the Marsac mill (Puy de Dôme), M. Rémie Couprie, 150,000 francs.

View of the Factory, Decorated with an Enlargement of the First Postage Stamp, on the Occasion of the Opening of the New Southwark Bridge by H.M. The King, 6th June, 1921.

one hundred years in 1919, but was too busy with orders for paper money to celebrate its centenary in that year—banknotes being more important than banquets! It was in

their appreciation of his management during that period.

Although of such a venerable age, being, we believe, the oldest banknote printing

American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme: showing also pile-table and fountain swung back and forme roller unit and transfer table removed from Press.

SPECIFICATION.

Inside Chase Measurement, 13½ in. × 19½ in.
 Type matter locked in chase, 12½ in. × 19 in.
 Largest sheet which can be delivered,
 12½ in. × 19 in.

Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.

Over-all Measurements:

Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
 Net weight, with motor, approximately 2,600 lbs.
 Speed Range 2,000 to 3,600 per hour.

x x

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its chargeable time by reason of the enormous reduction in the time required to change from one job to another.

All interested are cordially invited to see the American Miehle Company's Vertical Job Press now being exhibited at our Showroom address, No. 2, Salisbury Court, Fleet St., E.C.4

TYPOGRAPHY

You can set *direct from the keyboard* any job on the Linotype in faces and bodies from 5-pt. to extended 36-pt.

The Linotype is built with varying magazine and distributor equipments to suit individual printers. In this way the user only pays for what he has actual use for, and can extend the equipment when necessity arises.

Over 43,500 Linotype composing machines have already been made and delivered to almost every part of the world. Thirty-six years' knowledge and experience are behind every Linotype sold to-day.

If you are in doubt concerning the best Linotype equipment for your purpose, send us samples of your work so that we can advise you accordingly.

The London School of Printing and Kindred Trades.

New Institution Now at Work in Stamford Street.

Although it is not quite out of the workmen's hands, the L.C.C. London School of Printing and Kindred Trades in Stamford-street, is now fully launched upon its career, and the large staff of printing craftsmen whom Mr. J. R. Riddell (the principal) has under his charge, are busy instructing the young printers of the Metropolis from morning to night.

The old institution known as the St. Bride Printing School had completely outgrown the accommodation in the Foundation buildings in Bride-lane, and more room was required if the large number of students who wished to attend were to be admitted and were to be given the thorough training which modern conditions in the printing industry require. Accordingly, in 1917, when Mr. George Eaton Hart was the president, the idea was set on foot of promoting a scheme which should meet requirements. Looking back over the intervening period it is surprising to find that in so comparatively short a period the new school has come into being. That success has been achieved is due to the enthusiasm of the leading men in the printing industry, Lord Riddell in particular. Support came readily from all sides; and it is a tribute to the fine spirit existing in the craft that the governing body should consist of representatives of employers, the trade unions and other trade associations and the London County Council.

In view of its composite character it will be interesting to give the constitution of the Executive:—

President—The Right Hon. The Lord Riddell; chairman, W. Howard Hazell, J.P.; vice-chairman, T. E. Naylor, J.P.

Employers—London Master Printers' Association: H. Basil Cahusac, Geo. Eaton Hart, W. Howard Hazell, J.P. Newspaper Proprietors' Association: Geo. W. Mascord. Weekly Newspaper and Periodical Proprietors' Association, Ltd.: Geo. Springfield. Master Bookbinding Association: Ernest B. Judd. Electrotyping and Stereotyping Employers' Federation: C. S. Yeates. British Printing Ink Makers: P. Squire.

Employees—Amalgamated Society of Lithographic Printers: W. Stevens. National Society of Electrotypers and Stereotypers: W. C. Warren. National Union of Printing, Bookbinding, Machine Ruling and Paper Workers: S. Stubbings. London Society of Compositors: T. E. Naylor, J.P. Printing Machine Managers' Trade Society: H. Wilson Howes. National Society of Operative Printers and Assistants: Geo. A. Isaacs. Amalgamated Society of Lithographic Artists: Rupert Kneale. Correctors of the Press: S. F. Crampin.

Managerial—Printers' Managers and Overseers Association: E. W. Whittle. Book-

binding Overseers' Association: Geo. A. Eden.

L.C.C. Representatives—C. A. Bates, the Rt. Hon. C. W. Bowerman, P.C., M.P.; F. Garrett, Capt. A. U. M. Hudson, C. A. G. Manning, T. W. McAra, J.P.; W. J. Pincombe, J.P., Capt. G. S. C. Swinton, Edward Unwin.

The Departments.

The various departments of the School have been well equipped, thanks to the generosity of manufacturers in the printing and allied trades, who have supplied some of the latest machinery and apparatus, thus rendering the institution one of the most complete of its kind. It is by reason of this assistance that two new sections have been added, namely, the bookbinding and the electrotyping. Others have been extended. Whilst the Stamford-street premises are not what would have been designed had it been possible to plan them out afresh, the facilities are the best that could be secured. As Mr. Riddell points out, it was a question of taking this institution and converting it into a printing school or waiting some twenty years. The course to be taken, therefore, was obvious.

Some 40,000 square feet of floor space is available in the Stamford-street premises, and the various floors have been laid out to the utmost advantage. Accordingly the curriculum is enlarged and a system of intensive training adopted.

With the facilities provided, a student can qualify in any of the manifold operations which printing involves. In the composing department, there is instruction both in hand-setting of type and machine operation. The type cases are well arranged and ample furniture is readily accessible for the making up of formes. A separate room is set apart for the mechanical typesetting, the latest models being supplied by Linotype and Machinery Ltd., the Lanston Monotype Corporation and the Intertype Co. A number of dummy key-boards are also available for practice. Casters for the moulding of the type have been installed by Messrs. R. P. Bannerman and Sons, while supplies of metal and Fryotype metal pots are derived from Fry's Metal Foundry.

Excellent equipment is furnished in the litho department, instruction beginning with the preparation of the stones, and including the latest developments. Photo-litho has been undertaken rather in the nature of research, a step characteristic of the courage of the Principal. In this connection Messrs. Hunters Ltd. have presented a fine photographic equipment, and Pictorial Machinery Ltd., have given a printing-down frame by Lithotex.

Offset has long been a subject of study, and in the new School Messrs. George Mann and Co.

have brought the offset machine up to date in addition to supplying a plate graining machine. Messrs. Furnival and Co. provide a transfer press besides a double-drum direct rotary litho machine.

To admit to still further tuition in the art of illustration the P. Lawrence Printing Machine Co. is to provide a photogravure machine of modern type.

The Machine-Room.

The machine-room is one of the most complete in the whole building, its dimensions and lighting allowing of the proper manipulation of the formes and mechanism. Along one side are arranged the platens, and down the other are placed the cylinder machines. Here, any day, great activity may be seen as the students run off colour work in various stages; and very good colour work can be produced, as those who have seen the portfolios previously issued know. Automatic feeders have been fitted to some of the machines, for which the authorities are indebted to the Cross Paper Feeder Co. and the Canadian American Machinery Co., the latter company also furnishing a Camco folding machine. In the platen section John Haddon and Co. have installed a safety platen, as well as providing Tungstone furniture for use in the composing-room.

In the stereo and electro department there are all the facilities for acquainting the students with the processes under practical conditions. The deposition plant has been provided by Messrs. Canning and Co., of Birmingham, and equally elaborate provision has been made by the Amalgamated Press, A. W. Penrose and Co., and H. Williams and Co. in machinery.

The new bookbinding section promises from its appearance to give valuable instruction. All that is needed to complete the book, even to the decoration of the covers, is at hand. Messrs. Smythe-Horne, Ltd., have added a book-sewing machine, and Messrs. Hampson, Betteridge and Co., Ltd., are responsible for much of the binding plant.

Other firms which have helped to equip the School in a manner worthy of the institution are the St. Clement's Press (filing system), Nickeloid Co. (heating cabinet), Westinghouse Morse Co. (chain driving), Aerograph Co., Ltd. (aerograph equipment), and E. A. Braddick (motor).

Not only in practical work, but in the theory also is thorough training given. Thus there is a complete laboratory for the investigation of fundamentals, whilst six lecture-rooms are adapted for oral instruction.

Furthermore, a combined Library and Board-Room is well supplied with books and technical journals relating to printing. Here

the students can keep themselves well informed as to the literature of the craft. Equally important, there is a canteen where meals can be served. It should be added that the Stamford-street premises offer opportunities of extension.

The Staff.

With all these facilities, there is a good foundation for the building up of efficient craftsmen. But, of course, even the best equipment would be useless without an enlightened staff. Mr. J. R. Riddell (the principal) has taken no little pains in getting about him instructors who are highly qualified for the important and exacting task before them.

The completed staff as appointed is as follows, and the subjects indicated show how extensive is the syllabus:—

FULL TIME.—J. R. Riddell (principal), J. Fuller (deputy principal), H. D. Keats (chief machine instructor), G. A. Sayers (chief composing instructor), A. H. De La Rue (chief lithographic instructor), A. L. Butler (machine instructor), L. C. Mennell (machine instructor), E. E. Allen (composing instructor), R. G. Fenton (composing instructor), J. H. Burton (lithographic instructor), J. S. Sunderland (stereo and electro), B. J. Sansom (binding and warehouse), J. Stuart (general craft knowledge).

PART-TIME INSTRUCTORS.—E. C. Harrington (photo-litho), R. R. Tyrer (colour photo-litho), R. H. Watkins (costing and estimating), S. G. Yapp (salesmanship), J. Stuart (order clerks), C. Harrup (science and printing ink), E. A. Dawe (paper), L. Smith (design and advert), W. Wythe (monotype), H. J. Middleton (linotype), E. Smith (typesetting), F. M. Collis (printers' readers), H. J. Parker (printers' assistants), C. Harvey (general craft knowledge) and L. Sarjeant (metallurgy).

TECHNICAL STAFF.—A. W. Brown (lino. operator and technical assistant), H. Jacobs (technical assistant), E. F. Williams (workshop assistant), G. F. Coates (schoolkeeper).

CLERICAL STAFF.—A. R. Laird, B. E. Ilett and H. Stuart.

Matters Needing Justification.

The outside of the building is its worst aspect. An old structure, it still bears in deep stone-engraving the title of the benevolent society which formerly owned it. There are hopes, however, that this inscription will be effaced.

Another matter which it is desired to rectify is the payment of the full fee demanded by the London County Council for students who live or work outside the L.C.C. administrative area. The majority of these lads, as Mr. T. E. Naylor has stated, work for employers who pay rates to the L.C.C. Therefore it is felt by the School authorities that they are justified in asking the Council to recognise the students who live in the outlying districts as though they resided inside the administrative area and as being entitled to the benefits offered at a reduced fee. Negotiations are in hand with the Essex County Council in respect of their boys attending the School, and it is hoped to make similar compacts with other bodies. In this matter, as Lord Riddell demonstrated on the occasion of a Press inspection of the School, the governing body are fighting the battle not only of the printing industry, but of other trades. As His Lordship also pointed out, it is a serious hindrance that a boy, because he works in one place and lives in another, should be deprived of the best technical education available.

Character.

There is another aspect of the work of the London School of Printing and Kindred Trades which deserves mention. It is the influence which is brought to bear upon the students with the object of forming character. To that end a strict but healthy discipline is enforced. This has always been a main consideration in the mind of the principal; and indeed without imparting a sense of responsibility much of the training would be useless. Accordingly the trainees, many of whom study in their employers' time, are compelled to keep a strict record of their time, a task which has the added advantage of assisting them to understand the principles of cost-finding. Not the least useful lesson which is taught is that of thrift, and with £600 which has been raised there has been founded a St. Bride's Printers Pension Fund, which will perpetuate the name of St. Bride and help some poor craftsman in his time of need. With some 1,600 individual students, many of whom attend two or three classes a week, it will be seen that the task before the authorities of the new School offers great

opportunities, whilst the fact that there are about 200 on the waiting list demonstrates the reputation which has been gained for the institution.

Stereotypers and Electrotypers' AUXILIARY.

Further to our report last week of the successful concert under the chairmanship of Mr. W. J. Light held in aid of the Stereotypers and Electrotypers' Auxiliary on behalf of the Printers' Pension Corporation Funds, we learn that the principal donations were the following:—Winkler, Fallert et Cie, Berne, Switzerland, £26 5s.; W. J. Light and Co., £10 10s.; Amalgamated Press, Lavington-street, £10; A. Chadwell (*Daily Chronicle*), £6 10s.; Mr. Cocks, Mechanical Department (*Daily Telegraph*), £5 5s.; Nickeloid, Electrotype Co., £5 5s.; *British and Colonial Printer and Stationer*, £3 3s.; Badoureau and Jones' Chapel, £2 6s.; New Pegamoid Co., £2 2s.; Thos. Hardman and Sons, Ltd., £2 2s.; Fry's Metal Foundry, £2 2s.; W. H. Masters, Fleetway Press, £2 2s.; A. Wood and Odhams' Chapel, £1 10s.; A. Browning and Chapel Amalgamated Press, Gravesend Foundry, £1 12s. 6d.

Mrs. W. J. Light, Messrs. Edward Lloyd, Ltd., and many others contributed sums of one guinea or less, bringing the total up to £130, a gratifying result in view of the fact that the time was an exceptionally difficult one, coming so close upon the annual Pensions Festival.

HOLDERS of the 8 per cent. Notes, issued by Spicer Bros., and redeemable by 1936 at latest at 102, or earlier, subject to six months' notice, are given the opportunity of substituting the same for 5½ per cent. Twenty-Year Notes at 98. In about five years' time the redemption of these is, however, subject to six months' notice on the part of the company. The difference between the issue price of 98 and the redemption value of 102 is to be satisfied in cash,

Australian Notes.

Increased Paper Trade with United Kingdom—Local Industry's Slow Progress—Australian Timbers for Pulp Manufacture—Official Tests—Paper from Karri Mill-Waste and Sulphite—Further Experiments Proceeding—Paper from Cane tops and Trash—Newspapers Affected by Strikes—Government Printing Office Dismissals.

(From Our Sydney Correspondent.)

DISCUSSING Australia's purchases of paper it is stated that the vastly increased trade in paper with the United Kingdom is principally due to the fact that all classes of British paper and paper goods enjoy a preferential duty of 10 per cent.

IN spite of a considerable market for paper in Australia the local paper industry has not made the advance that might have been expected. However, experiments are now being carried on on a large scale with regard to utilising Australian woods for the manufacture of pulp for papermaking purposes, and a strong effort is being made to supply locally at least a part of the market requirements in paper, strawboard, and paper board.

TO ASSIST this industry paper pulp and various other articles now used in the manufacture of paper are admitted free of duty, and an increased duty has been added to imported papers similar to those which can be manufactured in Australia. Several mills are now in operation. During the past year a large plant, equipped principally with American machinery, has been erected, which is now operating with a minimum daily production of 35 tons of pulp board.

TESTS are being carried out by the Bureau of Science and Industry at the Australian Paper and Pulp Co.'s Geelong mill in order to ascertain the suitability of Australian timbers and pulp for papermaking. Samples of printing paper made from Karri mill-waste pulp (70 per cent.) and imported sulphite pulp (30 per cent.) have been submitted to the Director of the Bureau (Mr. G. H. Knibbs) by Mr. Benjamin, the officer in charge of the investigations. These samples, it is stated, show that a printing paper suitable for many purposes may be made from a mixture of the pulps referred to. Some difficulty was experienced in getting the pulp to run on the machine, but in the opinion of both Mr. Benjamin and Mr. A. E. Clarke (mill manager) a suitable paper may be made by modifying the preliminary treatment.

SIMILAR experiments are to be carried out, using a number of timbers, and the cost of production of the pulp and its papermaking value will be ascertained.

THE Government has been indirectly informed that a paper factory at Hawaii, erected at a cost of £100,000, is making excellent paper from cane tops and trash. As thousands of tons of cane tops are regularly burnt in the cane fields of Queensland, the Prime Minister was asked to instruct the Commonwealth Institute of Science and Industry to conduct experiments.

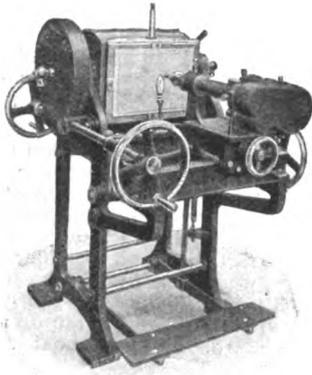

STRIKES of printing operatives in Western Australia and Tasmania have caused the non-appearance of newspapers at Perth, while the *Mercury* at Hobart was produced partly in type and partly by photo-lithography and subsequently by means of type-writing and process blocks.

IN connection with the strike at Perth, the Printing Trade Employees' Union was fined £50 for the part it took following a decision of the court to which the matter in dispute had been referred.

THE *Daily Mail*, Sydney, draws serious attention to the dismissal of upwards of 100 hands from the Government Printing Office. The persons affected include all branches of the trade. "Is the Government Printery another doomed State enterprise?" it is asked.

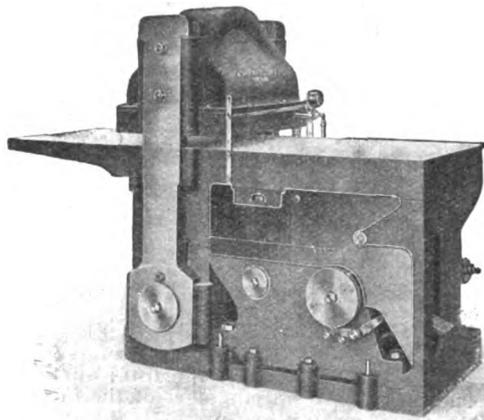

WINKLER Stereotyping Machines

SWISS MANUFACTURE

COMBINED ROUTER.

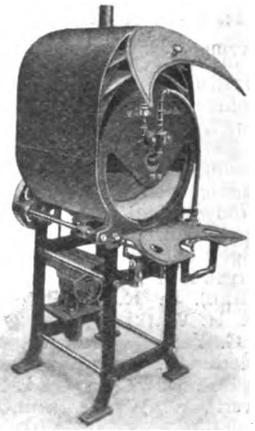

For Curved and Flat Plates. With Horizontal Cutter and Water Cooling.

AUTOMATIC MOULDING PRESS.

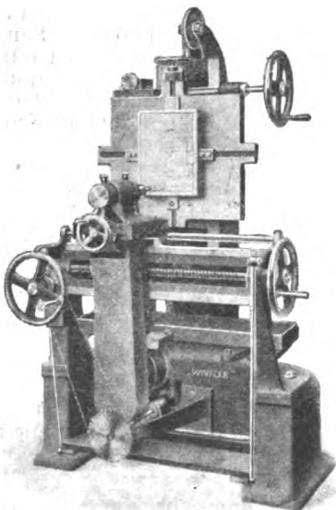

For Fine Art and Newspaper Moulds.

Electric or Steam Heated—for Dry or Wet Flong. Improves moulding results. Equals in capacity 3 Pneumatic Presses. Eliminates the Mangle. Restricts Moulding and Drying to one machine. Saves type, time, labour, power and fuel.

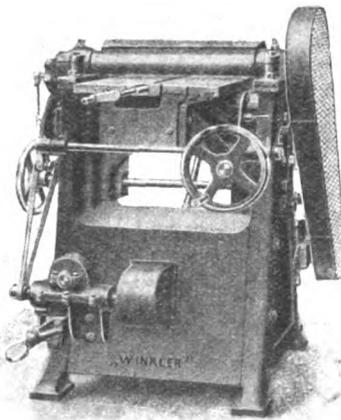

AUTOMATIC MATRIX DRYER.

Electrically or Gas Heated. The entire attendance consists in opening and closing the door of the drum.

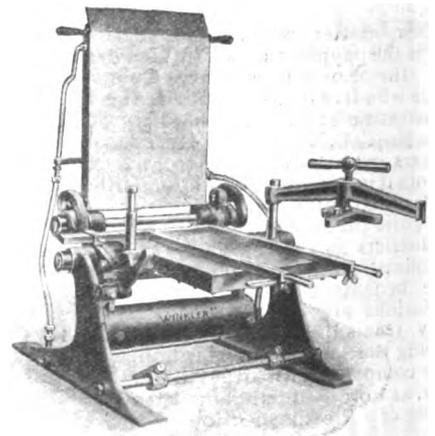

ROUTING MACHINE.

For Flat Plates. With Horizontal Cutter.

BACK MILLING MACHINE.

With reciprocating Rotary Cutter. Automatic movement of table. Unexcelled precision of work. Saves make-ready. Eliminates the roughing machine.

BALANCED CASTING BOX.

With Electric Heating and Water Cooling. For type-high and pica plates.

Trade Notes.

OPEN HOUSE POLICY.—The Open House Committee of the London Master Printers' Association called a meeting of the open and non-federated houses "to consider future policy," at Stationers' Hall yesterday evening (Wednesday).

At the December meeting of the South-West London Master Printers' Association, held on Tuesday of last week, the principal feature was a stimulating lecture on "Betterment" by Mr. A. R. Closs, works manager of the Solicitors' Law Stationery Society. We hope to find room for this lecture in next week's issue.

CITY firemen were called on Sunday to premises at New-street-hill, Little New-street, Shoe-lane, belonging to Messrs. Eyre and Spottiswoode, printers, Little New-street. Prompt action put a quick end to the outbreak.

PAUL BANCROFT, 25, printer, was fined £100 and £7 7s. costs at the Bow-street Police Court on Monday, for keeping a gaming house in Little St. Andrew-street; W.C.

MESSRS. W. H. SMITH AND SONS, in a letter to their branch managers and superintendents, say: "The firm has come to the conclusion that it will be in the best interests of all concerned if every member of the staff... over the age of 18 becomes a member of some recognised union. Our superintendents will have instructions after January 1st next," the letter adds, "to inquire whether our wishes have been carried out, and thereafter no promotions will be sanctioned unless the member of the staff concerned holds the card of some recognised tradesociety."

TO CELEBRATE the centenary of the *Law Times*, a small but distinguished company of judges and lawyers assembled on Tuesday at a dinner at the Grand Hotel. This professional organ was first issued in 1822 from 5, Quality street, Chancery-lane, and is the oldest legal paper in the country, and probably in the world.

TO COMMEMORATE the attainment of the age of 150 years, the *Shrewsbury Chronicle* has issued a special supplement, reproducing a facsimile of its first number and containing illustrated historical articles dealing with many aspects of the life of Shrewsbury and of the county.

A COPY of the "Pickwick Papers," in the original 21 parts, and the original green wrappers, was sold to a private collector for £300, at Messrs. Hodgson's last Thursday.

AT Sutton (Surrey), last week, Eric Whitehead, 18, of Queen's-road, Sutton, was committed for trial charged with setting fire to a local paper factory.

CHRISTMAS card orders are stated to be four times last year's volume. The Association of Christmas Card Publishers have instituted a window dressing competition, for Christmas cards this season, and this had induced brisk sales.

TRY ADVERTISING.—Addressing the Carlisle Chamber of Trade on Friday, Mr. Theodore Carr, ex-M.P. for Carlisle, recommended as a motto for business men: "Buy well, advertise well, and sell well." At the same gathering the Deputy Mayor referred to the glut of orders which followed upon two days' advertising in a certain case.

ADVERTISING CONVENTION.—The president of the Thirty Club of London (Mr. John Cheshire, of Lever House, Blackfriars), is seeking the co-operation of the printing and allied trades as well as the advertising fraternity in supporting the Club's invitation to the Advertising Clubs of America to hold the 1924 Convention of the Affiliated Clubs of the World in London. To that end efforts are being made to get together a strong delegation from Great Britain to attend the 1923 Convention at Atlantic City.

MESSRS. JESSE BROAD AND CO., LTD., printers and manufacturing stationers, of Jesbro Works, Buxton-street, London-road, Manchester, have opened a retail shop at 8, Piccadilly, where an excellent display of their many specialities is made. We have to acknowledge receipt from this firm of a neat vest pocket card bearing on one side a calendar for 1923 and on the other a reminder of stationery specialities which the firm is offering.

"SHORTHAND is useful in all walks of life," said Lord Beaverbrook at the prize-giving of Pitman's School at the Albert Hall on Saturday.

THE *New Statesman* announces in its current issue that Mr. Sidney Webb, M.P., has ceased to be chairman of the company which is responsible for the publication of that paper. The reason given for the resignation is the pressure of Parliamentary work.

ON Saturday night Mr. E. H. Cox gave a lecture at St. Matthew's Parish Room, Denmark Hill, entitled "From the Forest to the Breakfast Table." In the course of the lecture the film showing the production of *The Times* was put on the screen. Three other films, one representing the felling of trees and the making of the pulp, were also shown.

POSTING ABROAD.—Sir Edwin Stockton has asked the Postmaster-General whether he is aware that letters originating in England and circulated in England are still being posted in Austria to benefit by the depreciated exchange; and whether it is intended to take some means of dealing with this abuse of international postage, seeing that in transactions of this kind our Post Office does the work, and Austria and other countries receive the pay for it. Mr. Neville Chamberlain writes in reply:—I regret to say that, in spite of the reductions in the inland printed paper rates carried out earlier in the year, certain firms still make a practice of posting their circulars in countries with a depreciated exchange. Should the abuse continue, I shall certainly consider what effective steps can be taken to prevent it.

AT a Tonbridge inquest on Thursday on F. H. Whiffen, 49, a compositor, formerly of Bexley Heath, who died suddenly on the Tuesday, medical evidence was given that the post mortem examination revealed valvular disease of the heart.

THE late Mr. Edwin William Stevens, of Fleet-street, E.C., and of Powis-square, North Kensington, lithographer, who died on October 4th, left £3,459.

THE *Daily Herald* acknowledges receipt of a cheque for £23 9s. subscribed by the compositors of the *Daily Mail* for the funds of the *Daily Herald*. In addition, the *Daily Mail* compositors have decided to circularise the compositors of all other daily papers to support the *Herald*.

THE strike of printers which is paralysing the Swiss Press is threatened with serious extension. The masters decided upon a lock-out, to be effective this week.

AFTER this year the Hungarian bank notes hitherto printed in Switzerland will be printed in Hungary, an agreement having been reached between the Hungarian and Swiss companies whereby a branch printing office will be opened in Budapest, capitalised in both countries, which will print bank notes for Hungary and other countries, including the Baltic States.

A GRANT of £113,000 for the Indian Pavilion at the British Empire Exhibition has been sanctioned, say Reuter, from Delhi.

AFTER six months of stoppage the "Kommunar" Paper Mill in Russia has commenced work. Employment is given to 456 work-people to produce 147,000 poods of paper.

CONSUMPTION of news-print in the United States during this year, which is due to a keen fight for circulation by the large dailies all over the country, shows an increase of 13 per cent. over that for 1920.

Lord Dalziel's Retirement.

On completion last week of 30 years' active work in Fleet-street, Lord Dalziel announced his retirement from journalism and newspaper management. He has resigned the chairmanship and managing directorship of the *Daily Chronicle*, *Lloyd's News* and *Reynold's Newspaper*, the last named having been acquired by a syndicate in which the principal members of the staff are interested. The *Era* has been purchased by Mr. A. E. Abrahams, and the trade newspapers in which Lord Dalziel is interested have been acquired by a well-known publishing house. His interests in provincial newspapers have been taken over by a separate company in which a leading financier is interested. Lord Dalziel recently disposed of his holding in the *Pall Mall Gazette* to Sir John Leigh.

Trade Union Matters.

T.A. ELECTIONS.—Branches of the Typographical Association are being asked to nominate candidates for election as delegates to the annual meetings of the Trade Union Congress, the Labour Party, and the Printing and Kindred Trades Federation. Nominations will also be made for the annual election of the Executive Council, February 28th being the latest date for the acceptance of nominations.

THE Scottish Typographical Circular, in its official record of the proceedings of the Executive Council of the Scottish Typographical Association, says that approval has been given by the Council to a proposal from the Edinburgh branch making it binding on all the unions affiliated to the National Federation of Printing and Kindred Trades to secure unity of action in all movements for alteration of hours or wages, and that in all such movements affecting the trade the negotiating committee shall be the Executive Committee of the Printing and Kindred Trades Federation of the United Kingdom. A ballot of the Scottish Typographical Association was ordered to be taken on the question.

NEWRY DISPUTE.—The dispute in Newry, Ireland, still continues, every effort at settlement having failed. The situation in Ireland regarding the wages settlement is in a very strained position and serious developments are feared unless wiser counsel prevails.

PROPOSED T.A. DELEGATE MEETING.—The delegate meetings of the Typographical Association are held tri-annually, the last being held at Hastings early this year. Owing to the exceptional circumstances caused by the recent dispute, strong representations have been made to the Executive Council to hold a delegate meeting early in the new year. A voting paper is being issued to the members on the question, a full statement of the position being made. If the meeting is held, branches will be called upon to bear the delegate expenses which will not be paid from the general fund as hitherto.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

A. R. Greenfield the elder, A. R. Greenfield the younger, S. J. Greenfield and H. W. Greenfield, lithographers, engravers and printers, 140, Great Dover-street, London, S.E.1, under the style of Smith, Greenfield and Co.

Printers' Managers and Overseers.

"Parent" Association's Annual Meeting.

The December meeting of the Printers' Managers and Overseers' (Parent) Association, held on Tuesday of last week at the Old Bell, Holborn, was an important one, this being the annual general meeting. There was a good attendance of members, and some interesting discussion on the Association's internal affairs developed in the course of the evening. The president, Mr. S. M. Bateman, occupied the chair, supported by the vice-president and other officers.

Arising out of the reading of the minutes, announcement was made that Mr. S. J. Holt had withdrawn from the members nominated at the previous meeting for election to the Council.

The meeting next proceeded with the election of new members, the following being duly elected:—Mr. H. W. Lindsey (Caledonian Press, Ltd., 74, Swinton-street, Gray's-inn-road, W.C.); overseer, letterpress machine room). Mr. J. W. Tilley (Millington's "Crown Works," Tottenham, N.15; overseer, composing room). Mr. T. White (Fosh and Cross, Scrutton street, E.C.); litho manager).

Messrs. Lindsey and White were present, and received a personal welcome from the president.

The Year's Working.

Copies of the balance sheet for the year having been already circulated, the chairman proceeded to read the report of the Council for 1921-2. The report indicated that the year had been a period of steady progress—not all that could have been desired, but, in the circumstances, fully equal to reasonable expectation. Evidence of the accuracy with which the increase in subscriptions was fixed was provided by the fact that the balance of funds in hand was almost the same as a year previously, the present figure being a few pounds below that of last year. A satisfactory increase of membership was reported, after allowance for the year's losses. A detailed account was given of the attendances of members at council and committee meetings, also an indication of the nature of the general meeting of the year. Completion of the Association's third pension was put on record, thanks being expressed particularly to Messrs. A. E. Jarvis and G. H. T. Freeman. Though continued and increased unemployment had to be chronicled, the report closed on an optimistic note, indicating that with a fair prospect of the long-awaited trade revival being realised, the Council are looking forward in the fulness of hope to a period of sure and substantial progress.

Mr. Hart drew attention to the fact that eight members had had their names erased from the roll of membership during the year. He wished to be assured that no member had suffered erasure as the result of hard times.

The president and general secretary both replied, giving assurance that members' names were not erased until all reasonable endeavours to secure their retention had been exhausted.

Following the reading by the president of the accounts for the year ended October 31st, the auditors (Messrs. H. W. Jackson and J. French) testified to their satisfaction with the accounts of the Association, remarking that great praise was due to the general secretary and financial secretary for the excellent way in which the books were kept.

Questions from Mr. Dawson elicited full details of the costs incurred in connection with the Liverpool United Gathering and the Bohemian Concert.

In respect of the cost of sending representatives to special gatherings in the provinces, the general secretary drew attention to the increasing extent to which the interests of the Parent Association were being linked up with the provinces, and maintained the necessity for keeping in close and friendly touch with provincial centres.

Mr. Hart suggested that the accounts should include a record of the money for the payment of unemployed members. This suggestion evoked considerable discussion, in which several members participated. It was eventually agreed that since these payments were fully declared in the Association's general accounts in July, it would be inadvisable to introduce unnecessary complications by entering them also in the local accounts at the end of the year.

Adoption of the report and balance sheet having been proposed and seconded, Mr.

Dawson expressed the opinion that more attention should be given to them. He accordingly proceeded to make a running criticism or comment upon various items in the report.

After reply had been made, chiefly by the general secretary, to the criticisms offered, the report and balance sheet were adopted *nem con.*

In regard to the provision by the Association of prizes for technical students, it was agreed that the same amount as last year, £10 15s., be allocated to this purpose.

Election of Council and Officers.

The next item being the issue of voting papers and the election of council and officers; scrutineers were first appointed, the chosen members being Messrs. Burton, French, Hamilton and Summerfield.

All the Association's present officers having been nominated for re-election unopposed, these were first re-elected seriatim, each in turn making a brief expression of thanks for re-election—with the exception of Mr. Blackwell, who was unavoidably absent.

The officers of the Association accordingly continue as before, namely: President, Mr. S. M. Bateman; vice-president, Mr. R. H. Berry; treasurer, Mr. C. Durston; trustees, Messrs. J. C. Pugh and G. Phillips; general secretary, Mr. E. W. Whittle; financial secretary, Mr. W. H. Gill; hon. technical secretary, Mr. H. Blackwell.

There being sixteen nominations for eight vacancies on the Council, election was carried out by means of voting papers, the successful candidates being later announced as the following: Messrs. J. Acton (54 votes), G. H. T. Freeman (52), E. H. Campling (49), R. Simpson (47), C. Northam (41), A. H. Wilson (41), G. S. Waller (39), and E. Hutchins (38).

The Question of "Joy Rides."

Mr. Pugh recalled attention to the subject of delegates being sent from London to the provinces. In view of the fact that criticism on the point of expenditure for this purpose had again been made that evening, he wished to have it definitely put on record what was the feeling of the members in the matter. He therefore moved "that this meeting approves of the Council's action in sending representatives where deemed necessary."

Mr. Durston seconded, and Mr. Reed supported.

Mr. Carne moved as an amendment that the proposition lie on the table.

Mr. Dawson seconded the amendment.

Mr. Pugh objected to the amendment on the ground that it was not a direct negative, but the chairman put the amendment to the meeting, it being defeated by a large majority.

The proposition was then put and was carried *nem con.*

Mr. Walters proposed that a vote of thanks be accorded to the retiring members of the Council for their services during the past year.

This was seconded and carried unanimously.

The results of the Council election were announced (as detailed above), and the meeting closed with brief expressions of thanks from Messrs. J. Acton and A. H. Wilson.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

EGYPT.

Tenders have been invited by the Survey Department (Ministry of Finance) of the Egyptian Government for the supply of lithographic map printing paper for the year 1923-24. Tenders will be received by the Survey of Egypt, Giza (Mudiriya), Egypt, up to noon on December 23rd, 1922. (Reference D.O.T. 9509/F.E./M.P.)

The Egyptian Minister of Finance has invited tenders for the supply of paper, stationery, and general office material required by the Central Stores, Ministry of Finance, for the year 1923-24. Tenders will be received by the Central Stationery Stores Department, Ministry of Finance, Cairo, up to noon on January 25th, 1923. (Reference D.O.T. 9501/F.E./M.P.)

A CORRESPONDENT desires to get into communication with a firm which makes machine cut paper letters of all descriptions.

Postal Charges.

Printed Paper Traffic Realises Expectations.

In the House of Lords on Wednesday Lord Southwark asked the Government whether they could now say to what extent the postal revenue had increased since the recent reductions of postal charges; and whether the Postmaster-General could definitely state that the further reductions so urgently asked for by the united voice of business-men in the interest of trade revival and increased revenue would be brought into operation before the close of the year. He was glad to hear that the Postmaster-General was endorsing the wise policy of his predecessor of retaining that very able strong Advisory Committee of practical business-men.

The Earl of Onslow (Parliamentary Secretary, Ministry of Health), replied that when the reductions of postal rates were made in May they were estimated to cost the revenue £6,100,000 in a complete year, after allowing for the additional revenue to be obtained from the increase of the volume of traffic which the lower charges were expected to produce. The reduced charges had been in operation for six months, and, except in the case of printed papers, so far as could be seen at present the increase of traffic had not come up to the expectations. It was not the case that there had been an increase in the postal revenue. The sacrifice in revenue which the reductions entailed would certainly be £6,000,000 at least—probably more. If a further reduction to 1d. postage were given, there would no doubt be a further increase in the postal traffic, but it was equally certain that further sacrifice of revenue would have to be faced. That, it was estimated, would amount to another £5,000,000. The Government had not yet had an opportunity of considering the financial issues involved in this proposal, and, of course, they could not be dissociated from next year's Budget. In the circumstances he could not make any further statement at present.

Foreign Printed Matter for the U.K.

How it Affects the British Papermaker.

British papermakers undoubtedly lose many orders on account of printing done abroad and supplied to business houses in this country. The market is deluged with offers from continental firms to supply British houses with all kinds of printing, ranging from a visiting card to a complete newspaper, at an outlay that completely baffles the costing expert. It is obvious, therefore, that not only the home printer suffers, but also the papermaking and kindred trades.

The general public, when receiving price lists, circulars, etc., printed and posted abroad, cannot fail to be struck with their un-English appearance, but it is questionable whether they realise—or the firms that place orders for foreign work realise—the consequent unemployment to British workers and, as a natural result, heavier rates and taxes.

The particular industries affected, however, not only recognise but feel the full effects of such keen foreign competition, and it is not surprising they strongly condemn the lack of patriotism on the part of British firms, appealing to British buyers, who take advantage of unfair conditions, and place their printing work abroad.

The British papermaker is not afraid of legitimate competition, and he has made huge sacrifices during late years in order to meet it successfully. He does not expect to develop an extensive export trade, and at the same time to hold the home market exclusively. There are specialities made abroad, some even bearing watermarks owned by British wholesale stationers, which find a sale in this country on their merits. There are also papers manufactured in Great Britain which have a special distinction—hand-mades and esparto papers may be mentioned in this category—and consequently these find a world-wide demand.

It is the successful touting for British orders on the part of continental printing and publishing houses that affects the British papermaker, and some strenuous effort is necessary on the part of the home printer particularly, in his own interests, to take all possible steps to combat the evil.—*World's Paper Trade Review.*

THURSDAY, DECEMBER 14, 1922.

The London Wages Position.

SINCE last week, when we were able to put
forward a hopeful view of the position in re-
gard to wage-reduction in London, events
have moved a little further in the right di-
rection. The Paper Workers (warehousemen,
cutters, etc.), are now definitely in line, con-
firmation having been duly made of the
provisional agreement come to last week.
The only point on which wage peace in the
London printing trade still depends is the
decision of the National Society of Operative
Printers and Assistants, whose ballot has
been proceeding, the result of which is not
known at the time of our going to press. A
rejection by the "Natsopa" membership
would throw things back to a critical point
once more, and the outcome of such action is
difficult to envisage. We are hopeful, how-
ever, that the wiser councils of peace will
prevail, and the ballot result in acceptance of
the proposed settlement, in which case the
London trade may well heave a sigh of relief
in that the disconcerting influence of wage-
disputes is for a time removed and a period of
stabilisation entered upon.

Distribution Costs.

IMPORTANT observations on the vexed
question of distribution costs are made by
Commerce Monthly (published by the National
Bank of Commerce, N.Y.). It points out
that the buying public has long recognised
that the spread between producers' and
consumers' prices is unreasonable for many
classes of goods. The need for effective solu-
tion of the problem of high distribution costs
has been greatly accentuated by the advance
in the general price level. Producers are
coming to realise that these costs constitute
a serious deterrent to consumption and a check
on business. The present system is largely
an inheritance of traditions reaching back to
the period before modern methods of produc-
tion, transportation and communication had
been developed. Far-reaching reorganisation
is demanded and for its accomplishment

ability of the highest order will be required,
together with courage to eliminate every
needless step, and fearlessness in departing
from traditions which may be found to have
no basis for survival under modern condi-
tions. So great is the need that rewards are
certain to be commensurate with the services
of those men of vision and determination who
bend their efforts toward the solution of the
problem of successful distribution at low cost.
The responsibility is not limited to the distri-
butive trades. Production must be more care-
fully gauged in relation to consumption, and
destructive competition must be avoided.
Much waste can be eliminated by standard-
isation of products. Better organisation of
the physical facilities of terminal markets
would materially reduce distribution costs.
Consumers must realise that elaborate service
is expensive, that the more hands through
which a commodity travels, the greater the
cost, and that systematic and orderly pur-
chases are a factor in securing lower prices.
This is a matter which has peculiar interest
for the paper consumers of this country. Some-
thing has been done towards effecting econo-
mies of the kind referred to, and as time goes
on still more will, doubtless, be achieved.

The Paper Market.

PAPER merchants are competing very
keenly on large orders and are receiving a
good backing from the mills that sell only
through the wholesaler. In esparto writings
particularly there are some exceptionally low
offers and good business is being done. The
margin of profit may be very small, but
bigger quantities are being turned over on
the lower price. There is a good demand for
white and tinted banks at the present time,
and English papers are sharing well in it.
The home manufactured cheap bank of to-
day is little inferior to the better Scan-
dinavian makes, except, perhaps, in crispness.
A steady trade is developing in light-weight
tinted typewriting banks, a grade which the
Americans call onion-skin bond. The in-
creasing application of system to office
routine opens up the avenue to paper
specialities in which character and quality
count more than cheapness. Lightweight
banks are an important feature because of
their extensive storage capacity and facility
for carbon duplication.

British-made Boards.

THE use to which British mills could best
put straw crops is undoubtedly board manu-
facture. At present waste stock is the basis
of British board, and for this particular type
of board there is now a large and increasing
market, which is practically assured to the
mills concerned. Primarily this is a box-
making board, and in the better and stouter
grades a heavy book board. There still
remains to be captured the market which
looks to Holland for its boards. From Jan-
uary to September this year that market has
taken well over two million cwts. of straw-
board, valued at £890,000, so there is some-
thing to go for. It would not be wasted
effort if the papermakers would appoint
a small committee to compile a record of the
data and information available on the sub-
ject of strawboard manufacture. Within a
short time much of the experience and some
of the records secured at one mill or another
during the war will be lost to us, and to that
extent we should be handicapped in any future
effort to utilise straw crops.

It is pleasing to note that large quantities
of British news-print are going out to
Australia month by month. The ss. "Borda"
and ss. "Palermo," both of which sailed in
November, carried between them over 2,000
tons, consigned to various Australian ports
by Messrs. Edwards, Dunlop and Co. (Lon-
don), Ltd. This paper was manufactured at
the well-known Grimsby mills of Messrs.
Peter Dixon and Son, Ltd.

Central London Master Printers.

A Successful Bohemian Concert.

The Association of Master Printers of the London Central Districts, having made a noteworthy start of its winter session by persuading Mr. Wm. Gamble to lecture at its November meeting, decided to make its December gathering one of an entertaining and social character, and accordingly held a much-appreciated Bohemian concert at Stationer's Hall on Thursday last. Mr. J. D. McAra, F.C.I.S., presided over an audience which well filled the large hall, there being present many members of the Central London Executive and a large number of prominent London printers, including visitors from other local associations.

Mr. McAra opened the proceedings with a clever little speech in which he extended to all present a very cordial welcome and, referring to the difficulties under which the printing trade had been labouring, expressed the Association's desire to "broadcast a wave of laughter" and relieve their visitors of some of their worries by the aid of the "musicalities" provided.

The said musicalities were well adapted to this end, for the concert programme arranged by the Claude Chandler Concert Direction was a bright and entertaining one and the responses of the audience showed that the numerous items were much enjoyed.

A touch of sadness was, however, given to the occasion by the chairman's announcement that Lieut.-Col. J. R. Truscott, whose name appeared on the programme, was prevented from being present owing to the recent death of his wife. It was agreed on the chairman's suggestion that a letter of condolence should be sent to Col. Truscott from the meeting, and all present stood for a moment in silence, as a mark of respect and sympathy.

Mr. Howard Hazell's Address.

A break was made in the concert items to call for a speech from Mr. W. Howard Hazell, in introducing whom the chairman referred to Mr. Hazell's election as the president-elect of the London Master Printers' Association, and wished him success in the high office to which he would succeed.

Mr. Hazell very ably complied, delivering a breezy address which evoked a cordial ovation from the meeting. He indulged first in a brief retrospect over the year now drawing to a close; then looked forward into the coming year in an endeavour to indicate something of what it might have in store for the printing craft. His audience, he thought, would agree that the year 1922 had been filled with difficulty and trouble and small profits for the master printers of London. Contrary to expectation, the times of peace had proved even more troublesome than the times of war. The last year had been filled with long and difficult negotiations with the trade unions, but he was happy to say that he believed they had finally arrived at a settlement which, he hoped, would last throughout the coming year. Those who had not taken part in the negotiations might not have realised how difficult, and often how dangerous, the position had been on many occasions. He hoped that the settlement would mean that a period of stabilisation would be entered upon. Proceeding to emphasise the need for taking a pride in one's craft he reminded members of the Central Districts Association that they belonged to the most important association in the most important printing trade alliance in the most important centre in the world. Some of them might think that because they were not leaders they could not do much for the craft, but the success of their associations and alliances did not depend upon the work of a devoted few, but upon the co-operation and assistance of every member. If everyone of them would "pull his weight," they would do much in the coming year to promote and improve the industry to which they belonged. He thought there was a need that they should devote time and energy to encouraging the use of printing in every walk of life. By doing so they would be benefiting themselves, their neighbours and the industry. His Christmas wish for the craft was that in the coming year industrial peace, national peace and international peace—so closely dependent upon each other—might prevail, and that when they met again, a year hence, they might be not only a year older, but also a little wiser

and a little wealthier than they were to-day. (Applause.)

Mr. Claude Chandler's Concert programme provided plenty of variety. An outstanding feature was Peter Yorke's Syncopated Four, who, with piano, saxophone, banjo, drums and accessories provided lively music of the jazz variety. The first encore was evoked by the excellent soprano singing of Miss Eileen Connelly, whilst Miss Lena Copping's humour at the piano was also well applauded. Mr. Claude Chandler presented some laughable impersonations and also a very clever ventriloquial sketch. Violin solos by Mr. Arthur E. Cox were given a very cordial reception. Mr. David Openshaw showed himself the possessor of a fine baritone voice, which was heard to good advantage in several songs, and humorous songs and patter by Mr. Will Bentley were also extremely well done.

The good attendance which the concert elicited indicates that the Central Districts Association, thanks mainly to the energetic Organising Secretary, Mr. Burchell, has a reputation for providing entertainment of a satisfactory quality, and the appreciation shown by the visitors on this occasion would seem to indicate that that reputation will be maintained.

Personal.

A New York message states that the Hearst papers announce as a new regular contributor Mr. Lloyd George, former Prime Minister of England, who will cable his views of news, events, and European crises as they arise during 1923.

VISCOUNT BURNHAM and the Rt. Hon. G. H. Roberts, M.P., were last week re-elected presidents of the Industrial League and Council.

LADY BRITAIN, who fills the chair of the council of the Society of Women Journalists, held a reception of its members on Friday in the Harcourt Room of the House of Commons. There was a large attendance of people prominent in the newspaper world.

SIR ARTHUR SUTHERLAND, K.B.E., well known in the newspaper world as the chief proprietor of the *Newcastle Chronicle* and associated newspapers, has been appointed a Knight of Grace of the Order of St. John of Jerusalem.

SIR JOHN LEIGH, BART., M.P., was entertained at the House of Commons last Thursday to a complimentary dinner by the directors of the *Pall Mall Gazette* in celebration of the completion of the first year of his proprietorship of that journal and in honour of his return to Parliament for the Clapham Division.

In last Friday's special anniversary number of the *Shrewsbury Chronicle* appears the following letter written on behalf of the Prince of Wales to Mr. A. E. Spender: "The Prince of Wales is sorry to hear that you have severed your long connection with Plymouth and the *Western Morning News*. His Royal Highness, however, was interested to know that you have become editor of the *Shrewsbury Chronicle*, which is shortly to celebrate its 150th anniversary, and has directed me to send you his good wishes for your success in your new undertaking."

MR. WILLIAM HUNT, L.C.C., has been elected Master of the Makers of Playing Cards' Company.

It is reported that Mr. McCurdy will in future fill the place which Lord Dalziel has recently held in control of the *Daily Chronicle* and its allied publications.

MR. A. WILLIAMSON, the Costing Secretary of the Federation of Master Printers, has for some time been engaged on the compilation of a costing scheme for the Paper Box Manufacturers' Federation. We understand that the scheme is now practically complete, and that his work is greatly appreciated by the committee who will have the responsibility of placing the scheme before the boxmaking industry.

MR. WILLIAMSON has had a busy period lately addressing meetings on costing at

Guildford, Colchester, Ipswich, Norwich Cambridge and Birmingham. He has formed the opinion that there is a decidedly greater interest being taken in better methods of costing than has been the case for some time. The value of comparative statistics and the relation of output to cost is seizing upon the imagination of the printer to his benefit. The operative also is seeing the necessity for correct time-recording.

IN continuation of the series of technical lectures arranged by the Stationers' Company and Printing Industry Technical Board, an address on "The Training of the Craftsman" will be given by Mr. J. R. Riddell (principal, London School of Printing), at Stationers' Hall, Ludgate-hill, E.C., to-morrow (Friday), December 15th, 1922, at 6.30 p.m.

THE chair will be taken by Sir L. Amherst Selby-Bigge, Permanent Secretary of the Board of Education, and examples of work from the London printing technical schools will be on exhibition before and after the meeting.

MR. W. BULLETT, the popular secretary of the Electrotypers and Stereotypers Managers' and Overseers' Association—already in possession of a reputation among local celebrities as an exponent of the game of bowls—has secured further honours "on the green."

AT the annual dinner of the Cyphers' Bowling Club, Beckenham, of which Mr. Bullett is a member, he was last week presented with the handsome Oliver Challenge Cup, together with a very fine bowlers' kit bag. We are sure his many friends in the trade will re-echo the expressions of congratulation which were meted out to him by the chairman on his achievement.

MR. JOSEPH GOODMAN, the well-known lithographic and offset machine specialist, is removing his printing ink and machinery business from 146, Fleet-street, to more commodious premises at 12, Crane-court, Fleet-street, E.C.4. Mr. Goodman hopes to be settled at his new address next week.

MISS REBECCA WEST, the well-known journalist, and Miss Cicely Hamilton, journalist and playwright, have been elected to the directorate of *Time and Tide*.

MR. A. G. WILKIN, journalist, Elgin, has retired after 50 years' service with the *Aberdeen Free Press*.

MR. F. M. EATON FERN, the managing editor of the *Glamorgan Free Press* and *Rhondda Leader*, has been presented by the staffs of these papers with a silver-mounted ebony walking-stick, on the occasion of his marriage to Miss A. Iron.

MR. J. E. THORNTON, the commercial manager of the *Yorkshire Post*, will retire from that position at the end of the year, after a total service with that paper extending over half-a-century. He will be succeeded in the managership by Mr. A. Grime, at present the editor of the *Yorkshire Evening Post*.

THE proprietor of the *Freeman's Journal*, Mr. Martin Fitzgerald, received last week from Irish Irregulars a letter ordering him to leave Ireland immediately under threat of death.

The Paper Trade Golfing Society.

Lord Riddell's Cup.

The first round of this competition has now been completed, with the result that the following have passed into the second round, which must be played off by December 31st:—

H. F. Higgins, C. Baker, F. A. Skerratt, F. Neville Lloyd, A. E. Brown, E. H. Raynham, E. Lewis Winn, R. D. Oldham, Percival H. Jones, A. Dykes Spicer, S. A. Harding, A. W. Dean, G. Buchanan, Capt. C. R. Mullings, Major F. H. Bowater, C. R. Craig, Ronald Spicer, Douglas Spicer, P. W. Kennett, S. G. Saunders, W. C. Powers, H. Goldstraw, F. C. Harding, Sir Frederick Bowater, Major A. J. Evans, A. S. Batchelor, H. S. Wescott, R. A. Beer, R. H. Calcraft, A. A. Neale, P. B. Burn, T. A. Colclough Leete.

The final match will be played over 36 holes at the Spring Meeting of the Society to be held in April next.

The Bookbinder

A Forward Step in Bookbinding Education.

Well Equipped Department in London School of Printing.

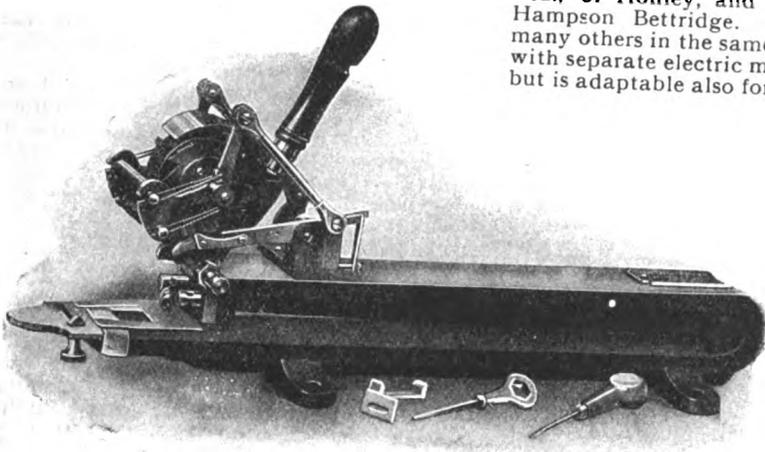

In respect of the new London School of Printing, Stamford-street, of which a general description appears on another page, the feature of most interest to the bookbinder is the provision of a bookbinding department equipped with an excellent selection of the most up-to-date machinery and tools,

the efficiency and adaptability of female labour in the binding trade.

The most outstanding machinery item is one which opens a sphere of study which it was impossible to touch at St. Bride School. This is a new double striker pen ruling machine made by Messrs. John Shaw and Sons, Ltd., of Honley, and installed by Messrs. Hampson Bettridge. This machine, like many others in the same department, is fitted with separate electric motor for power drive, but is adaptable also for hand operation. It

is fitted underneath, so that the worker can have the bench open when a marbling job is in progress, or can close the top and proceed with general work. The bench also includes, a little above floor level, a rack for the storing of work, tools, materials, etc.

Another interesting contrivance making for economy in bench work is adopted for use in finishing. Saving of bench space and also saving of gas is effected by means of a special circular bench which the school owes to the

The Hampson Bettridge Hand Paging Machine.

Perforating Machine.

Index-Cutting Machine.

enabling the student to study satisfactorily the whole range of the science and art of the binder's craft. It was possible at St. Bride School to teach little but theory in respect of the subject of bookbinding, facilities for practical work being almost entirely absent. Although useful courses of instruction were given even under that serious handicap, it is obvious that the move to Stamford-street, with the acquisition of adequate apparatus for practical bindery work under workshop conditions, will mean a great increase in both the utility and the popularity of the book-binding classes. These are well attended in the evening by senior workers, and in the day by

is a fine piece of machinery and incorporates several new devices, one of these being a knocking-up apparatus for dealing with sheets at the delivery end.

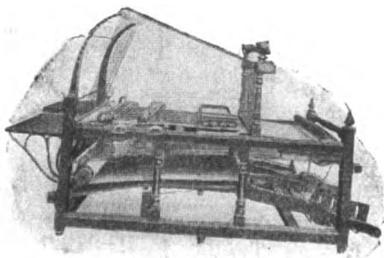

A large proportion of the machinery installed is by the firm of Hampson Bettridge and Co., of Fann-street, London, E.C. An interesting item is the hand paging machine, a remarkably adaptable and efficient piece of apparatus, the long arm giving facilities for numbering even on awkwardly large sheets. Another excellent machine is the Hampson Bettridge latest type (No. 8) automatic wire stitcher, designated "The British." An outstanding feature of this is the ease and speed with which alterations of stitch can be effected. Then there is also what the firm call their "Universal" machine, a useful little machine which does thumb-hole cutting, round cornering, square corner cutting, punching and eyeletting, index cutting, stabbing and two and four-hole punching. Other Hampson Bettridge machinery installed includes a board cutter, an "Imperial" combined inking and gold blocking press, a backer, a loose-leaf punching machine and an indexing machine.

The department can also boast a fine new Smyth-Horne No. 4 sewing machine, power driven, suitable for either account books or letterpress work (given by Messrs. Smyth-Horne, Ltd.); a Canadian-American Machinery Co.'s "Camco" demy folder; a 42-in. Furnival guillotine; a 4-bar upright standing press; and a French standing press.

Novel Bench Accommodation.

Running the full length of the department immediately under the light of the windows is a substantial wooden bench, which has features that make it exceptionally convenient for its purpose. Sections of the bench top are hinged so as to lift right back and give access to the interior. At several points in the bench the interior is fitted to contain a laying press with plough, so that the worker can, without moving from his place, perform such operations as backing by hand in the press or gold lettering on back; then close the top down and proceed, say, with finishing, thus saving time, space and effort. At another point in the bench a marbler's trough

ingenuity and assiduity of the principal, Mr. J. R. Riddell, who first suggested the device and then pegged away at the manufacturers until he succeeded in getting his idea translated into wood and metal. The device consists of a central stove, for the heating of finishing tools, this being completely surrounded by a series of eight lock-up cupboards joined together to form with their tops a circular bench around which eight students can be accommodated each having ready

The Shaw Ruling Machine.

The "British" Wire Stitcher.

apprentices who are sent by their employers during working hours.

Some Fine Bookbinding Machinery.

In the new school it is gratifying to find a large and well arranged workshop, in which are grouped just such machines as one finds in an up-to-date bindery. A very wide variety of bindery operations is provided for. Instruction can be given in letterpress and stationery binding, both hand and mechanical, and we doubt if there is any class of bindery work which the London School is not equipped to teach. Of much interest, by the way, is a suggestion that a class for girls should be started, wherein would be taught all the operations for which girls are eligible, as folding, perforating, wire stitching, sewing, numbering, etc. The suggestion opens up possibilities of a much needed increase in

access to the central stove and each having the benefit of a useful cupboard. The idea seems a good one which should be worthy of wide adoption.

The School's Bookbinding Instructor.

In Mr. B. J. Sansom, principal instructor in bookbinding, the London School is fortunate in possessing a teacher of exceptionally wide knowledge of his subject—as is obviously necessary in view of the very comprehensive curriculum through which students are to be taken. Mr. Sansom has proved his ability as a teacher of bookbinding during five years' successful service at St. Bride School. He is

Notes and News.

a member of the Printing, Bookbinding and Kindred Trades Overseers' Association, to whom he has lectured on more than one occasion, and is well known in the trade. Mr. Sansom is one of those enthusiasts in craftsmanship whose work is both vocation and hobby at the same time. He is immensely zealous for good workmanship and keen in pursuit of the most up-to-date theory and practice relating to all the numerous spheres of knowledge that touch upon bindery operations. We hope, therefore, to see full advantage taken of the excellent facilities possessed by the bindery department of the new London School, and to find students' successes testifying to the efficiency of the instruction given.

**Bookbinders' Costing.**

SIR,—In the article which I wrote for your issue of November 16th, I made the comment that some of the teaching served out in our technical classes could be criticised, and followed this up with the suggestion that a Federation certificate should be accepted as qualification for teaching cost-finding. The secretary of the Federation Costing Committee wrote you on November 21st expressing willingness on the part of that Committee to arrange costing meetings with any branch of the J.I.C. or Trades Union. To our mind he omitted the vital feature by making no reference to the subject of qualification to teach cost-finding.

Then on November 24th you have a letter from "Interested" who imputes to us in his opening lines the suggestion that the instruction given in technical classes is not on the right lines and that the tuition received does not fit the student for the work of a costing clerk. The first part is a distortion of our comment reserving the right to criticise some of the teaching, and the second part comes out of "Interested's" imagination, for it is nowhere in our article. Letting this pass for correction, "Interested" wholeheartedly accepts our qualification suggestion by recognising the need which we have often emphasised for a closer co-operation between technique and practice in costing. As the only recognised system of cost-finding is that inaugurated and propagated by the Federation, it is but logical that its teaching should be planned and largely controlled with the help of that body. Teachers of and instructors in cost-finding should be backed up and helped by the Costing Committee just in the same way that members installing the system are. As evidence of the right to receive this help and backing, enrolment by virtue of the qualification certificate should suffice. Under such circumstances the instructor would be recognised as such by the F.C.C. There appears to be a need for a Technical Section in the Federation whose work would be to co-operate with the technical institutes of the country in all matters which have a common interest. There should be a parent body and alliance committees composed of the most practical and technical minds on the master printers' side along with departmental heads and selected instructors from the training schools. Representatives from the men's side have an equal right to voice their opinions on a matter which affects the welfare of their future members. Perhaps the District Industrial Council organisation holds a suggestion worth thinking over. There is food for thought on this question. Technical institutes lose efficiency by the aloofness of the industry itself, and in turn industry sacrifices efficiency and future development by any lack of efficiency in the training imparted to its future members. There are not many subjects of more vital importance, but there are many of less importance which receive far greater consideration.

Yours, etc.,
HARRY A. MADDOX.

Manchester,
December 10th, 1922.

MESSRS. E. W. ALDRIDGE AND CO., wholesale paper agents and merchants, 91, Queen Victoria-street, London, E.C.4, have been appointed sole agents for the United Kingdom for Messrs. Radeberger Papierfabrik A.G., who are the well-known mill for art cover papers and also of white and coloured index boards, filing and leatherboards.

Trade on the Up Grade.

The bookbinding industry is slowly but surely improving, especially on the stationery side. Publishers are still keeping a tight hand on new issues and look askance at the cost of production which militates against the revival of popular priced editions. Looking over a list of publications for the year we see that during the first six months of the year there were 4,063 new and second editions while for the second six months the total reaches 5,119. November was the biggest month of the year with 1,111 editions, followed closely by December with 978 editions. Obviously even the publishing section is steadily improving its output, but we still hear of idle printing and binding machinery.

State of Employment.

The unemployment returns show up slightly better for the allied trades as a whole. Although the figures do not very accurately reflect the trend of trade they show clearly enough a slight diminution of unemployment. Generally speaking there is not much short time now being worked, but there are a good many establishments with staffs below normal.

The Price-Cutting Problem.

There have been further meetings on price-cutting and its effect on the industry, but in no case have we heard of any tangible result. The problem is not capable of immediate solution, being in itself a product of abnormal conditions. When the conditions become normal, price-cutting to a large extent will disappear. The general conclusion is that price-cutting could never have become prevalent but for the lamentable ignorance of so many bookbinders and printers in cost-finding. Any excuse that there may have been at one time on the ground that time dockets were not recognised is now negated. It still remains a fact that in the majority of printing and bookbinding establishments prices are worked out with no real knowledge of costs.

The Costing of Materials.

One of the difficult problems in connection with bookbinders' costing is the correct recovery of the cost of materials. Apart from the more obvious factors such as leather, cloth and boards, there is a whole host of minor items, including thread, tape, glue, paste, linings, gold leaf, marble paper, marbling colour, tabs, etc., etc., which total up to a significant amount. There are various methods of treating these in costing and estimating, but no agreement on any plan. We are well aware of the recommendations of the Federation, but are of the opinion that there is room for improvement or modification. The chief thing about costing is that certain set principles must be accepted and adhered to. There is room for instruction in the general principles underlying the recovery of costs of material.

Parchment Size.

A well-known firm of leather and parchment makers has developed the manufacture of parchment size as a by-product, and is issuing samples for testing to those interested.

Prices of Leather.

The following prices are quoted by a London tanning works for lots of a dozen skins; mixed qualities for full and half-binding (price is per square foot in each case): Red glazed basils, half-binding, 7d.; ditto, good, 8½d.; ditto, large stout, 10½d.; roller basils, 7d.; red glazed skivers, 5d.; ditto best, large, stout, 6½d.; blue, green and brown basils, 10½d.; ditto, best large, 1s.; rough fleshes, 8½d.; Anglo hides, 1s. 6d.; ditto, best selected, 1s. 7d.; law calf, 2nds, 1s. 8d.; ditto, best, 1s. 10d.; pastegrain skivers colours, 7½d.; ditto, purple-black, 7½d.; plain Persians colours, 1s. 1½d.; ditto, purple-black, 11d.; H.G. coloured Persian goats, 1s. 5d.; ditto, purple-black, 1s. 4d.; rough basils, 8½d.; velvet Persians, 10d. to 1s.

Other Bindery Materials.

There is no particular change in the market prices for other materials. Gold is hardening a trifle, as also is calico and other cotton fabrics. Millboards and strawboards are firm, the latter being quoted at £9 15s. and £11 5s. per ton for light and heavy boards respectively. The demand for strawboards is poor. Special terms are at present being offered by the makers of British strawboards.

Substitutions for Marble Papers.

Marble papers are in poor demand, and the price is on the stiff side. Bookbinders are largely employing substitutes, and many of them have introduced end-paper linings decorated with proprietary emblems. There is a grade of lining paper on the market produced more especially for the box-making industry, which answers admirably to many of the bookbinders' requirements at low cost. Better still, it is the product of an English paper mill.

Art Leather Cloth.

There is a series of new designs in art leather cloth now on the market of which we have received samples. Antique hide, levant and pigskin are well reproduced in a variety of colours.

English Bookcloth and a Rival.

We think it is only fair to the leading manufacturers of bookcloth that we should give the sequel to some comment which we made on a competitive material a few weeks ago. It had been represented to us that this material was equal value at lower price. Since then we have had the benefit of closer experience and actual use, as a result of which, in our own case, we have speedily reverted to what must be regarded as the standard English bookcloths.

Bookbinding Prices in Aberdeen.

In our last bookbinding issue we published some particulars showing how the bookbinding work required for the Aberdeen Public Library was finding its way into Huddersfield. The Aberdeen University Public Library Committee, however, have adopted a different attitude in regard to the work coming under their control. In face of the fact that prices of Aberdeen binderies have not fallen to the level of English concerns they are unwilling that work should be done outside Aberdeen.

A recent meeting of the University Committee had under consideration the question of the library binding, a decision on which was deferred at last meeting. The librarian stated that he had had several interviews with representatives of the local firms (Jacksons, Ltd., and Edmond and Spark), who for many years have shared the library binding, and who had now submitted a revised joint estimate showing a reduction on the prices hitherto in force, and had promised a further reduction as soon as lower wages would make this possible. Although the prices have not yet fallen to those quoted for the Public Library Committee by certain English binding firms, the Committee resolved that it was desirable to avoid sending the University binding away from Aberdeen; and instructed the librarian to resume for one year relations with local firms.

SEVERAL attempts have been made recently to invent and patent adjustable and detachable book covers, we presume to protect the binding, as the binding is intended to protect the book. No doubt some one will invent a cover to protect the cover that protects the binding that protects the book!—The Librarian.

MR. CHARLES R. SOMERVILLE, who established his wholesale and export paper business in Glasgow in 1920, announces that he has taken into partnership his sons, Mr. Robert C. and Mr. Edwin Somerville. The business will be carried on at 152, Sauchiehall-street, Glasgow, under the style of Charles R. Somerville and Sons.

NO ESCALATOR can whisk you up to success. The stairs have to be climbed sometimes in darkness, gropingly.

DIVIDENDS AND REPORTS.

WARRILLOWS.—Net profit of this Birmingham firm of printers, paper dealers, etc. for year ended June 30th, including profit on sale of an investment, was £125,403, making with balance brought in £139,442. Directors recommend final dividend on preference shares for six months ended June 30th, to reserve £117,500, plus £22,500 from share premium account, and carrying forward £14,442.

"LADY'S PICTORIAL AND SPORTING AND DRAMATIC NEWS."—Profits for year ended September were £4,124. A scheme of reduction and re-organisation of capital is being formulated. Previous year 2 $\frac{1}{2}$ per cent. was paid on preference shares, with assistance of £3,000 from reserve.

MERGENTHALER LINOTYPE CO., BROOKLYN, N.Y.—Report for year to September 30th, 1922, states that British company—Linotype and Machinery—although hampered by labour difficulties and by depreciation in foreign exchange, is securing a substantial volume of business and has a high reputation for the quality of its product. The German company has sold a very satisfactory number of linotypes. Total net profits were \$2,304,771. Dividend at rate of 10 per cent., leaving surplus of \$1,024,771.

AMALGAMATED PRESS.—Directors of Amalgamated Press (1922) announce dividend at rate of 10 per cent. per annum on ordinary shares, and 7 per cent. on preference shares, both less tax, payable January 1st, 1923.

RONEO.—The profit for the year to June 30th last is £46,398, which compares with £71,888 for the preceding year. The preference dividends have been paid, but no distribution is recommended on the ordinary shares, which for 1920-21 received 10 per cent.

ST. NEOT'S PAPER MILL CO., LTD.—The directors have decided to pay an interim dividend of 5 per cent., free of tax, in respect of the current year ending April 30th, 1923. The company as yet has not come to a settlement with the Inland Revenue authorities as regards its taxation liability, and the issue of accounts in respect of the two years ended April 30th, 1922, has thus been deferred. Dividends amounting to 7 $\frac{1}{2}$ per cent., tax free, have been paid on account of the year ended April 30th, 1921, and the dividend (if any) in respect of the year ended April 30th, 1922, is dependent on the settlement to be made with the authorities.

NEW COMPANIES.

PEACEHAVEN PRINTING WORKS, LTD.—Capital £500; newspaper proprietors, printers, publishers, typesetters, booksellers, stationers and advertising agents, etc. Private company. Permanent directors: A. E. Mit-

chell, G. A. Morris, J. Rushworth and J. E. Savile. Registered office: 93-4, Chancery-lane, W.C.2.

T. Y. NUTTALL, LTD.—Capital £50,000; to acquire the business of paper importers and merchants carried on as "T. Y. Nuttall," at Manchester, and to carry on the business of paper merchants, wholesale stationers, paper mill agents, printers, lithographers, manufacturing stationers, papermakers and stainers, etc. Private company. First directors: W. E. Nuttall, F. Whalley (managing director), and H. Hamlett. Registered office: 10, Marsden-street, Manchester.

INDIAN AND EASTERN DRUGGIST (1922), LTD.—Capital £1,000; to adopt an agreement with T. H. Wilkins, and to carry on the business of advertising contractors and agents, proprietors and publishers of newspapers, journals, magazines, books and other literary works and undertakings, etc. Private company. Subscribers: T. H. Wilkins and S. F. Roberts. T. H. Wilkins is first and permanent director. Registered office: 49, Watling-street, E.C.4.

CARLTON PAINT-PRINTING PROCESS, LTD.—Capital £1,000; letterpress and general printers, stationers, die sinkers, block makers, process designers, engravers, photogravure and intaglio printers, manufacturers of colours, printing inks, or paints, and artists' materials, etc. Private company. First directors: W. T. Wallace, A. A. Martin and F. E. Robson. Registered office: Carlton House, Great Queen-street, Kingsway, W.C.

CRANE PAGET AND CO., LTD.—Capital £3,000; advertising agents and contractors, printers, publishers, stationers, photographers, etc. Private company. Permanent directors: L. Teller and M. E. Balcon. Registered office: 17, Cork-street, Burlington-gardens, W.

JOHN LINDLEY, LTD.—Capital £2,000; printers, lithographers, book and print sellers, art journalists, advertising agents, etc. Private company. First directors: J. Lindley and J. Wensley. Registered office: 25A, Winckley-square, Preston.

F. SABEL AND BARRATT, LTD.—Capital £1,000; to adopt an agreement with F. J. Sabel, and to carry on the business of paper merchants, agents and brokers, wholesale stationers and manufacturers of paper and paper articles, etc. Private company. Permanent directors: F. J. Sabel, J. W. Barratt and Elsie A. Sabel; the two first named are managing directors. Registered office: 179-180, Upper Thames-street, E.C.4.

FINANCIAL INFORMATION BUREAU, LTD.—Capital £50; supply to newspapers of all kinds, of financial, commercial or general news, the supply of financial, commercial or other information to companies or private individuals; the acceptance and distribution of advertisements, the compilation of statistics, the publication of newspapers; the conduct of a general printing business; the dealing in stocks, shares or other securities, etc. Private company. Subscribers: E. A. Platt and G. S. Seaton.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HURST AND BLACKET, LTD. (Publishers, etc., London).—Satisfaction to the extent of £9,000 on November 10th, 1922, of debentures dated December 2nd, 1921, securing £15,000.

GUILBERT-WENHAM PRINTING CO., LTD.—Particulars filed of £1,000 debentures authorised November 8th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £750.

JAMES SMITH AND SON, MUSIC SELLERS, LTD.—Satisfaction in full on November 13th, 1922, of first mortgage debentures dated September 2nd and October 27th, 1921, securing £5,000.

ANCHOR PRESS, LTD.—Satisfaction to the extent of £12,000 on November 10th, 1922, of

debentures dated December 2nd, 1921, securing £25,000.

SKIFFINGTON AND SON, LTD. (Printers, etc., London).—Satisfaction to the extent of £4,000 on November 10th, 1922, of debentures dated December 2nd, 1921, securing £10,000.

BURRUP MATHIESON AND SPRAGUE, LTD.—Land registry charge and mortgage on 114, Southwark-street, S.E., and leasehold premises on ground floor of 31 and 33, Throgmorton-street, E.C., both dated November 24th, 1922, to secure all moneys due or to become due from the company to Coutts and Co.

J. J. KELIHER AND CO., LTD. (Printers and stationers, etc., London).—Satisfaction to the extent of £1,000 on November 21st, 1922, of debentures dated October 10th, 1921, securing £7,000.

BANKRUPTCIES, etc.

RE LUDGATE, LTD. Manufacturers of Loose Leaf Ledgers and Stationery Equipment, 36, King-street, Covent-garden, W.C.—The creditors and shareholders of this company (in liquidation) met on December 7th at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C., before Mr. G. D. Pepys, official receiver. The order to wind up the company was made on the petition of Amprior Cabinet, Ltd., Renfrew, Ontario, Canada, creditors for £5,357 in respect of goods supplied. A statement of affairs showing the position on May 7th, 1921, the date of the appointment of a receiver for the debenture bond holders, showed liabilities £25,395, against assets valued at £13,354, and a total deficiency of £43,435 with regard to shareholders. The chairman reported that the failure of the company was attributed by the directors, first of all, to heavy depreciation in the value of their stocks in 1921, owing to trade depression; secondly, to the reduced turnover in 1921 due to the same cause; and, thirdly, to reckless buying, by means of which the company's capital was tied up in large stocks which very considerably depreciated. The chairman added that he had received about £10,500 from Mr. Peden from the sale of the business and realisation of the stock, leases and book debts. There remained a few outstanding debts to be collected, but very little more was expected to be recovered. It was anticipated that the creditors would receive about 6s. 8d. in the £ by way of dividend, and it followed that no return whatever could be made to the shareholders. It was resolved at both meetings to leave the liquidation in the hands of the official receiver, to be assisted by the following committee of inspection, viz., Mr. T. O. Hart (S. H. and W. Hart), Mr. H. B. Hatcher (Merritt and Hatcher), and Major White (Amprior Cabinet, Ltd.).

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

Lecture by Mr. E. C. Bateman, M.B.E.,
of H.M. Stationery Office.

Impressions of a Visit Paid to the German State Printing Office.

The usual monthly meeting of the Association was held on Tuesday of last week at the headquarters, St. Bride Institute, Bride-lane, London, E.C.4, the chair being occupied by the president, Mr. A. W. Hunt. There was a large attendance of members, and at the close of some brief routine business, an interesting lecture was given by Mr. E. C. Bateman, M.B.E., Deputy Director of Printing and Binding, H.M. Stationery Office, who took as his subject "A Visit to Germany." During the course of the lecture some poignant references were made to the enterprise displayed by German printers and engineers.

The minutes of the November meeting were read by the secretary (Mr. A. Cox) and confirmed.

Among the correspondence submitted was a letter from Mr. W. H. Christopher, acknowledging with thanks the Association's donation (through Mr. J. Dixon) to the Printers' Pension Corporation; Mr. J. W. Davis, an Edinburgh member, sent greetings for the coming year.

Bohemian Concert and the Annual Dinner.

With regard to the bohemian concert, to be held on February 3rd, 1923, at the Talbot Restaurant, Mr. J. J. Jones, one of the stewards, reported that the arrangements for this event were practically complete. With the co-operation of Mr. A. C. Ware (his co-steward) he anticipated a most successful evening.

It was moved, seconded and carried that the annual dinner be held as usual, and that Messrs. J. A. Esler, J. J. Jones and A. C. Ware be appointed stewards.

Nominations were then invited for the position of auditor for the ensuing year on account of the retiral, according to rule, of Mr. E. W. Tuff. Mr. F. C. Peacock was unanimously elected to fill the vacant post, and to act with Mr. W. T. Lingham, who continues to hold office for another year.

The Lecture.

Mr. Bateman, who met with a hearty reception on being called upon for his lecture, said that his trip to Germany was undertaken to ascertain what printing engineers in that country had to show regarding labour saving machinery and modern devices as compared with English engineers of the same category. He also wanted to make a tour of the State Printing Works in Berlin. The journey was made in the summer of 1920, a period some 19 months after the Armistice, when the conditions of living in Germany were very difficult, and when English visitors were not numerous. His attention had been called to some articles appearing in the *Daily News* of a visit paid to Germany by Mr. A. G. Gardiner, in which were recounted the many obstacles to the little amenities of life which were then being experienced.

It was with a feeling of adventure caused by those articles that Mr. Bateman embarked, in company with a colleague and a German-speaking friend. From Victoria they reached Ostend, and from there they immediately took train to Brussels. After explaining the many interesting places to be seen in this famous old city, Mr. Bateman and his companions entrained for Cologne, passing through Liege on their way, at which place, by the way, there were very few signs of the late siege. Mr. Bateman next described the many historical places of interest in Cologne, and dealt particularly with the famous Gothic cathedral, which was commenced in 1248 and not entirely completed till 1830, and for which that city is noted.

After many amusing experiences encountered between the British Military Permit Office and the German Permit Office in order to get passports vized, Mr. Bateman and his friends eventually arrived in Berlin, at which city it was their intention, if possible, to secure admittance to the State Printing Office. The first attempt in this direction met with failure. A second attempt was made accompanied by a letter from the British Embassy to the Director of the State Printing Works,

When the Director saw the letter he put further obstacles in the way, and requested another letter from the Embassy to Dr. Kloster, who was then Germany's Foreign Minister. A visit was then made to the German Foreign Office, with the hope of an interview with Dr. Kloster. However, the visitors were not successful in seeing Dr. Kloster; they told his private secretary what they wanted, and the Foreign Minister kindly made arrangements with the Director for their inspection of the State Printing Office. The Director was now exceedingly courteous, and conducted them over the building himself, the inspection occupying two and a half hours. They went into many places where they were told no foreigner had ever been before, and saw all they wanted to see. Many of the rooms were unlocked as they entered, and locked again immediately from the inside. Many of the workers were locked in in various rooms of the building, and were not free to leave except at the proper times, each employee being then carefully searched. The strong rooms were double locked, and in some cases treble locked, so that it was impossible for any of the workers to take anything off the premises.

Printing Paper Money.

Paper money, continued Mr. Bateman, was being printed at the time of their visit, and notes of lower value than 100 marks were being printed from ordinary zincos or nickel-faced stereotypes on letterpress machines. Higher values were being worked on copperplate presses, while stamp printing was being run off from nickel-faced stereotypes.

An inspection was next made of the composing room, which Mr. Bateman thought was a model of what a composing room should be. Here they saw the most comprehensive range of foreign types in the world, used for setting foreign languages. He believed there was scarcely any known language or dialect that could not be set up from the founts there for the requirements of any country in the world.

Printing Machines.

The printing machines were very up-to-date also, most of them being manufactured by Messrs. Schelter and Giesecke or by Messrs. Koenig and Bauer. One of the latter firm's machines had an automatic feeding apparatus at both ends of the machine, and was printing stamps at 5,000 sheets an hour.

While in Berlin a call was made on two firms well known for the manufacture of envelope making machinery, Messrs. Fischer and Messrs. Telschow, and Mr. Bateman expressed the opinion that the productions of these firms were in many ways superior to the English made machines. The lecturer said he did not hold any brief for German engineers, but he thought they were far more thorough in what they did than were Englishmen, for they never seemed to be quite satisfied with their machines. After producing a good article the German engineer always hoped and tried to make the thing even a little better. It was the lecturer's experience some time ago to require a machine for a particular piece of work. English engineers were approached and each turned it down as impracticable, without any explanation. The proposition was then made to a German firm; they were prepared to undertake it, but could warrant its efficiency for only a limited period, and would prefer not to do it. At the same time a reasonable explanation was given why its efficiency could not be guaranteed for a longer period. It was more satisfactory, the lecturer thought, to be told that than to be told simply it was impracticable.

Disc Ruling in Hamburg.

From Berlin train was taken to Hamburg where the disc ruling machines of the famous house of E. C. H. Will were seen. While in Hamburg they did not see a single pen-ruling machine in use, all of their ruling practice being executed on disc-ruling machines which seemed to be very efficient. Several specimens of the work done on these machines were displayed for the members' inspection, which, the speaker said, they would agree were creditable specimens of ruling work, of which no house need be ashamed.

In Hamburg a visit was also made to the Co-operative Printing Works, an up-to-date and palatial building, where they saw the machinery and were treated with every courtesy.

At Leipzig.

Leipzig was the next city visited, where they saw the famous three-sided trimmers made by the firm of Mansfeld. His own opinion was that there was nothing in the

world like these machines for the class of work they were intended for. At that time the manufacturers were handicapped by the shortage of raw material. Another firm, whose productions were of great interest, was that of Messrs. Schelter and Giesecke, the makers of the celebrated "Phoenix" Platen and the "Windsbraut" two-revolution machine, the latter being known as the German Miehle.

The remainder of the address was devoted to a fascinating description of an itinerary of the various towns on the Rhine. In concluding, Mr. Bateman said they were treated with the utmost kindness and courtesy, in fact he went so far as to say they were treated better than the German would have been in this country at that time, for the German certainly seemed to be forgetting the enmity caused by the war.

At the conclusion of the lecture several questions were put to Mr. Bateman.

Mr. A. W. Hunt (the president) in moving a vote of thanks to the lecturer, said with regard to German machinery he could not echo Mr. Bateman's sentiments, for he thought it was in many respects superior to that of the British engineer. They were all deeply indebted to Mr. Bateman for the instructive lecture he had given them.

The vote of thanks was heartily accorded, and the meeting terminated by a vote of thanks to the chairman.

New Paper Mill in Java.

According to the *Industrie und Handels-Zeitung*, a company has been formed, apparently with the support of the Netherlands East India Government, with a capital of two and a-half million florins, to found a mill at Padalarang, in Western Java. The Government is said to have contracted, as from the beginning of 1923, to take in the first year 100 tons, in the next two years 1,500 tons, each at a price of 1 fl. per kg. From then onwards the company undertakes to deliver the paper at market prices. At present the market price in Europe is 45 cents per kg., and with cost, insurance, freight, customs, etc., added, it will be 65 cents per kg. in India.

Disinterested Advice.
 In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

New Inventions

Blinder's Nipping Press.

In a nipping press for bookbinding of the kind having two opposed heads, one carrying a stationary but adjustable platen, the other carrying a movable platen, inter-connected sets of toggle gear are provided, one set acting between one fixed head and the movable platen, and operated by another set connected to it and to the base of the machine, with means for operating the toggle gear and for supporting the movable platen and confining its movements in a straight line path; also means are provided whereby the book in successive movements is nipped at its stitched edge and then as a whole, afterwards being discharged to a conveyer. The movable platen D operates in an horizontal direction upon wheels D¹, D² between guides E, being actuated by interconnected toggle-links B¹, D³, F, F¹, operated by a crank F² connected

to pinions B², which engage pinions B³ on the shaft B⁴. The fixed platen C is provided with pairs of detent rods C¹¹, C¹², withdrawable into the platen and head A, and arranged so that the rods C¹¹ support the book during the preliminary nipping and are withdrawn to allow the book to drop upon the rods C¹² for the final nipping, after which the rods C¹² are withdrawn, and the book drops upon the conveyer plate G. The withdrawing motion of the rods C¹¹, C¹² is obtained by forming part of their length as a rack to engage pinions C⁴ on shafts C⁵ connected by levers C⁶ and links C⁷ to bell-crank levers C⁸ actuated by horizontal rods C¹⁰. A reciprocating motion is imparted to the rods C¹⁰ by pivoted arms B¹⁰, B¹¹, which carry rollers engaging cams B⁸, B⁹ on the shaft B⁷. Spiral springs C¹³ within the head A provide a cushion effect for the detent rods C¹¹, C¹². Sliding upon the conveyer plate G is a delivery bracket G¹ carried by guide bars G² and connected by links to the pivoted arm B¹⁰, which imparts a forward motion to the bracket G¹ for delivering the books. Two guide bars G³ are carried by brackets G⁹, G¹⁰ movable in lateral slots in the conveyer plate, and provided underneath with rack bars G¹⁹, so that both may be moved towards the centre line of the machine by a handle G¹⁷ driving a shaft G¹¹ and spur wheels G¹². Preferably the platens are of sufficient depth to accommodate one book receiving its final nip and another receiving its preliminary nip at the same time. The invention is patented by Mr. J. Murray.

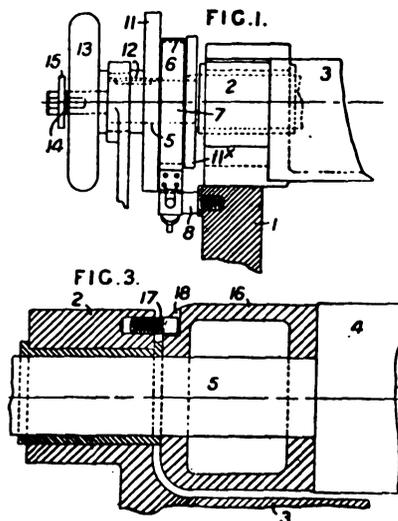

Printing Surfaces.

An invention by Messrs. H. Hurwitz and Co. relates to a printing surface for copying documents, and is produced by preparing on a rigid surface a coating of a metallic salt and applying thereto an original which has been produced with an alkaline or other ink which will combine with the salt solution to form insoluble oxides, hydroxides, or other compounds which will retain fatty ink or colour. In one example, very dilute hydrochloric acid is rubbed on to the surface of an aluminium plate and an original, written in ammoniacal ink, is then laid upon the plate. After removal of the original, the plate is rolled or rubbed with fatty ink. In another example, a silvered plate of brass or copper is treated with dilute nitric acid, and in a third example an iron plate is treated with a mixture of hydrochloric, sulphuric, and nitric acids.

Inking Mechanism.

In inking mechanism of the kind wherein the duct roller is controlled by a brake to prevent its rotation from being accelerated when the rapidly rotating transfer roller contacts therewith, the brake mechanism is so constructed or arranged that the brake is put out of or into operation by hand turning means, whereby the duct roller may be released from the brake and then turned by hand in a forward direction at will. As shown, the shaft 5 of the duct roller 4 is mounted in bearings 2 formed on or secured to the ink trough 3 and has loose thereon a brake disc 6 engaged by a brake strap 7 secured to a pin 8 carried by a part 1 of the machine frame. A friction disc 11 keyed to 12 to the shaft 5 is adapted to be pressed against the brake disc 6 by means of a hand-wheel 13 having a threaded boss engaging

the threaded extremity 14 of the roller shaft 5. Another friction disc 11^x revolves with the shaft on the other side of the brake disc 6. By turning the hand-wheel 13 backwards the braking pressure between the discs 11, 11^x, and the disc 6 is released. The hand-wheel then contacting with a collar 15 on the end of the

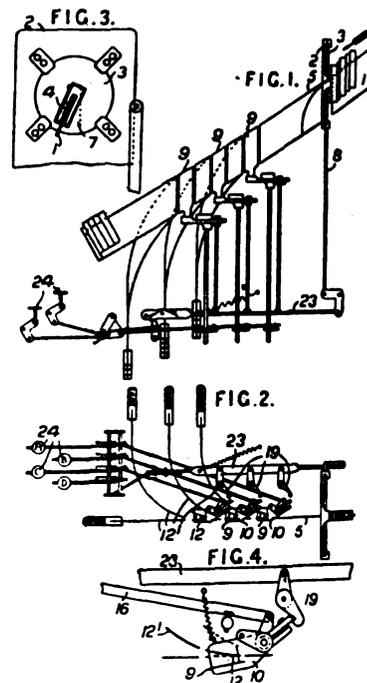

shaft to enable the roller to be rotated by hand. Bodies 16, held against rotation by studs 17, engaging recesses 18, are provided to fill the spaces between the ends of the roller 4 and the ends of the trough 3. The invention is patented by M. W. V. Wilson and the Victory-Kidder Printing Machine Co., Ltd.

Distributing Type.

The specification of an invention patented by Mr. O. Pusino describes an apparatus for distributing type having deep slots in their shanks, by which they are guided on rules, operated by the depression of keys. The type are delivered on to a rule 1, Fig. 1, so as to rest against a plate 2 on which is mounted a rotatable plate 3, Fig. 3, containing a slot 4, which is normally in alignment with the rule 1 and receives the lowest type. The plate 3 is slightly rotated to bring the type into register with a slot 7 in the plate 2 through which the type passes on to a rule 5. The rule 5 has movable parts 9, which are normally in line therewith and are mounted on levers 10,

each of which carries also a short curved rule 12. The levers 10 can be rocked by means of keys 24 and rods 16 so as to replace any of the movable rule sections 9 by a curved section 12 which diverts a typesliding down the rule 5 on to one of a series of collecting rules 12¹. The lower end of the rule 5 may serve as a collecting rule for type of one character. The operated levers 10 are retained in position by hooks 19, which are retracted when the next key is depressed by a rod 23 connected to a universal bar. The plate 3 is also operated from the universal bar by a link 8 and rod 23. Another invention by Mr. Pusino relates to machines for setting type

having slotted shanks so that they may slide upon rules. The type, which have slots 1, Fig. 1, preferably inclined or bevelled at the upper end, are stored on rules 3, Fig. 2, on which they are retained by lugs 4 and pins 5. The lowest type on a rule can be raised by means of a sliding block 6 having a forked extension 6, and then slides down the lower portion of

the rule into a rectangular twisted tube 8 by which it is rotated and permitted to fall upon a collecting rule 9 having an arresting stop 10. The blocks 6 are raised by levers 7 and rods 7¹, operated by keys 7¹¹. When a line has been composed, the stop 10 is removed and the type are pushed on to a removable rule 11 which exactly fits the slots in the type.

In connection with the 1923 election for the Printers' Pension, Almshouse and Orphan Asylum Corporation, we have received an appeal for votes and interest earnestly solicited on behalf of William Seymour Day (machine manager) who, in his 69th year, is now making his first application to the Printers' Pension Corporation. For 56 years he was employed at the University Press, Cambridge, and at all times was an active and warm-hearted supporter of charitable objects. Mr. Day was a life subscriber to the Pension Fund (1902); total subscription, £225. Proxies will be thankfully received and acknowledged by Mr. John Miller, University Press, Cambridge.

STEREOTYPING
IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*
 The following is one of many
 unsolicited testimonials we have
 recently received.

Under date of May 10th Mr. E. P. Woodman,
 Managing Director of the Fisher Bookbinding
 Co. (1912), Ltd., writes:—

"We are sure you will be pleased to
 hear that through the advertisement that
 we have in your old-established paper—
 the *British and Colonial Printer and Sta-*
tioner—we have received numerous en-
 quiries from all parts, and have been suc-
 cessful in securing some very good orders,
 which proves conclusively that your
 Journal circulates amongst those who are
 in search of manufacturers who can carry
 out their orders to their satisfaction, and,
 of course, give their customers faith in
 the work they undertake to bind.

"It may also interest you to know that
 we are very busy, and, from what we can
 see of it, the whole of the Printing and
 Bookbinding Trades will soon be in a
 flourishing condition, which is much to
 be desired after the slack period we have
 all gone through for the past two years.

"We wish you continued success with
 your Journal."

"Betterment" in the Printing Trade.

A Paper Read before the S.W.L.M.P.A. by Mr.
A. R. Cosh (Solicitors' Law Stationery Society).

At the December meeting of the South-West London Master Printers' Association, held at the Public Library, Lavender-hill, S.W.1, the members were addressed on the subject of "Betterment" by Mr. A. R. Cosh, works manager of the Solicitors' Law Stationery Society. His words of counsel certainly left a great deal of food for thought in the minds of those members present, and are worthy of wider consideration.

In the course of brief preliminary Association business, Mr. J. D. Wise (president) asked the members to join with him in sending a letter of sympathy to their esteemed Alliance president (Lieut.-Colonel J. R. Truscott) in his recent sad bereavement, a suggestion which was cordially approved.

Other business having been disposed of, Mr. Wise called upon Mr. A. R. Cosh to give his address, Mr. Cosh receiving a very cordial reception. The following is, in part, Mr. Cosh's address:—

"From one point of view I have, I consider, a slight advantage over some of you, inasmuch as, not being an employer myself, but wholly sympathising with the employers' outlook, I can, from my position as manager and aforetime apprentice and craftsman, see also that of the employed—often a wrong outlook, it is true, but still sometimes right.

"There has been much talk of late on what is termed 'betterment'. Often, I am afraid, very impracticable schemes have been propounded by irresponsible amateurs, who have no real responsibilities, and appear to lose sight of the hard and dominating fact that if a business does not pay a fair dividend it must cease to exist. Consequently, all 'betterment' schemes should be directed to the betterment of employer as well as employed. I do not propose to go into much in this direction, believing myself that improvements in conditions and organisation are better found among the apparently trifling every-day matters than in heroic schemes of profit-sharing and the like. Profit-sharing will come in due course, as sure as night follows day, but those who hope to share in profits must first learn to help earn them.

The Drabness of Industrialism.

"In 1854, nearly 70 years ago, Charles Dickens wrote these words:—'Several large streets, all very like one another, and many small streets, still more like one another, inhabited by people equally like one another, who all went in and out at about the same hours, with the same sound upon the pavements, to do the same kind of work, and to whom every day was the same as yesterday and to-morrow, and every year the counterpart of the last and the next.' I have for a

long time felt that much of the unrest and bad temper common to all who work together under the deadly drab conditions which industrialism imposes on us are due to the monotonous sameness of everything connected with our daily employment, and it would be one step towards betterment if each, in some way suitable to his own business, could break through this deadly sameness.

"Why not, as opportunity serves, break away from the regular hours?—there are occasions when some of your staff have nothing to do and are pretending to look busy: why not let such go off a bit early? Try the effect on yourselves, start a bit earlier tomorrow morning, work a little harder during the day; this will allow you to leave business and go home to an early tea with your wife. You will have done as much work, and will feel happier and better for the little change. If this is good for you, why not equally good for your employees?"

"A very little ingenuity will suggest ways in which you can make such breaks in the monotony of your staff, and the first among them to whom I would direct your favourable consideration is, as the Factory Act terms them 'Young Persons.' Now what in fact happens with regard to them is this: boys and girls attend school, leaving their homes a few minutes before 9 a.m., sit down to work, which does not tax their energies much, for two or three hours. They then have an hour-and-a-half off in which to get their dinner and play in the playground. Then two hours more work and home again. On a certain day, they reach the age of 14, when their inclinations and the necessities of their parents impel them to seek employment, when, instead of leaving home a little before 9, they have to leave about 7, work from 8 until 1, have a one-hour break spent in consuming a makeshift dinner, and for want of something better to do, become a noisy nuisance to everybody, themselves included. They then go on to the end of the working day and probably stand in a crowded conveyance, arriving home, if lucky, about 7 p.m., twelve hours out. What a complete difference from that which they had been used to! Under the circumstances, it is small wonder if they prove troublesome and unsatisfactory. Then as to the work which is given young persons to do. It is unfortunately impossible to give them anything but the most uninteresting drudgery or the carrying of messages and parcels, which I am sorry to have observed are, through the thoughtlessness of the packer, unduly heavy. We cannot do without messengers and we are unable to command dry weather—but it will be found a paying proposition to let them rest now and again and

to see they are not loaded too heavily, and do not get too wet.

"Again, Woodbines and ice-cream will not keep a boy's navel away from his backbone, and as no one can work well if those parts of the anatomy approximate too closely, it might be as well to provide suitable food as part wages. Then as to their hours, I suggest that half of them might start at 8 or 8.30 and others at 9 or 9.30, and since the Factory Act does not apply to errand boys these at least could have half-an-hour only for dinner and leave that much earlier at night.

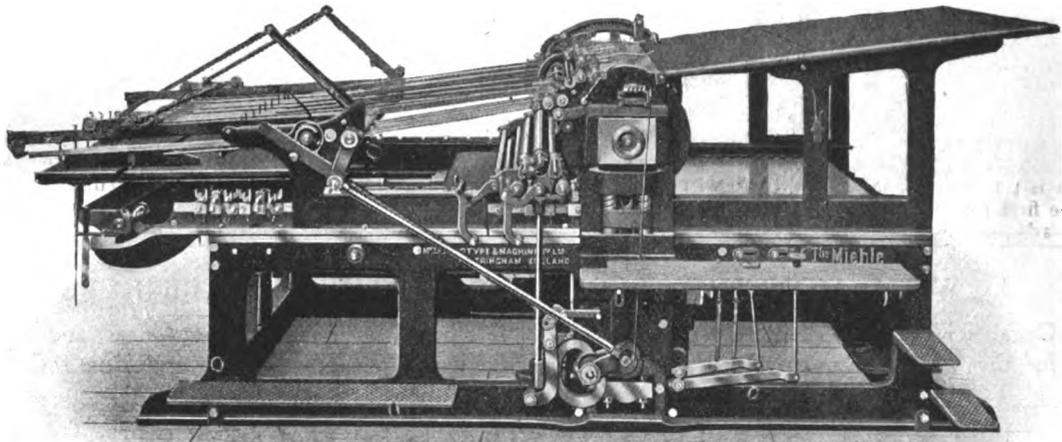

The Value of Sport.

Shorter hours, including the Saturday half holiday, are not the unmitigated joy we delude ourselves by thinking they are. Leisure without interesting occupation only leads to lassitude; and lassitude in young persons leads to mischief—very often, in young men, to drink. It does seem to me necessary for the governing class, of whom employers form the major part, to encourage the spending of time by lads and young men in healthy sports and recreation. I regard football, even if it be only the watching of play by others, as an institution which deserves every help and encouragement, and, whatever our own inclinations may be, it is surely much better that these folk should be letting off their superabundant animal energies in health-giving sports on a Sunday than congregating and loafing at street corners, or playing pitch-and-toss on some bit of waste land. If the hands employed in any particular printing works are insufficient in numbers to form an athletic club, I put it to you that two or more neighbouring works might well combine to that end. Admitting that it is occasionally inconvenient in the extreme to let the players leave at the regular time when work is urgently wanted, the brighter outlook on life, the "something-to-live-for" appearance of your younger employees is ample recompense, quite apart from the fact that the desire to get away sharp to football or tennis is sufficient incentive to increased endeavour to get done all the work that is known to be required that day.

The Apprentice.

"The boy naturally suggests the apprentice. I am sorry to have to admit that the blame for much of the incompetence of the journeyman is attributable to ourselves and their fellow workers. By far the greater number of apprentices just 'happen' to learn what they know of their trade, and it seems to me there are a few well-marked reasons for the state of things which exists. First, the average journeyman is by no means anxious that

There is no reason why you should not have your share of the highest class of letterpress printing—when you have a Miehle two-revolution press.

The press that "advertises itself" also advertises its user by raising the standard of his single and three- and four-colour work.

The Miehle is manufactured by Linotype and Machinery Limited at their Works in Altrincham, Cheshire.

It is built in six sizes, from double demy to ex. eight crown.
For full particulars write to the Head Office of the Company.

an apprentice should become a menace by developing into a first-class craftsman. The men are not to be hastily blamed for this attitude, seeing that there is usually not enough employment to go round. If a successful business man is not anxious to help a rival to capture his business, we can scarcely complain of the workman adopting a similar attitude! Secondly, we do not exercise sufficient care in the selection of candidates, and by far too short a probationary period is given before the indenture is signed, and when it is signed it is an archaic document quite unsuited to modern industrial conditions, and for too long a period.

"The training of a future workman is one of the most onerous contractual obligations which a master printer undertakes. If we want skilful industrious workmen of steady reliable character, it is up to us to select the right material in the first place, and see to it that the training is adequate. It is my considered opinion that, having satisfied oneself of the general steady character of the candidate, he should be given at least twelve months' trial. It is no use leaving it to the boy to say whether or no he likes the trade after the usual month, he hasn't the courage to say 'No'; in fact, he does not know whether he does or not. But during twelve months he can be observed and the probability of his liking and his suitability for the craft fairly well estimated; then the indenture should be for not more than five years, and that, five years of intensive training, with wages dependant on his attainments, rather than on the efflux of time. The careful selection and training of the future workman I hold to be a necessary and important item of betterment proposals.

Interest in Staff.

"There is an old saying to the effect that 'He who would thrive, must ask his wife.' Applying that axiom to factory affairs we might say 'He who would thrive must look to his staff.' No master printer will be continuously and increasingly successful unless he keeps close watch over the character and idiosyncrasies of his staff. It can be 'taken as read' that if a master takes the trouble to surround himself with men of steady character and habits, he will find them not only dependable but above the average in skill and industry. Given time, and a little patience, such a staff can be gathered around. Always remembering that they are made of precisely the same stuff as ourselves, have the same troubles, the same love of home and children, and same aches and pains, it is 'betterment' to spend a few minutes daily in getting intimately acquainted with them. In doing so, be very careful of anything like patronage. It is somewhat difficult to get in touch with their real, unaffected selves, but believe me it is worth the trouble and it pays.

House Committee.

"Having a satisfactory staff, start right on with the formation of a House Committee, representing both male and female workers. At first the members and the matters which they bring to you will prove bothersome, but by the exercise of a little patience you will find they settle down to the work and that they may be trusted to arrange many of those matters of moment to themselves which otherwise would be brought to the management. When there are indications of the committee having taken seriously to its work it is time to take advantage of its usefulness by relegating to it many matters which, however gently handled by the management are not so entirely to their satisfaction. The ultimate result will be found to be that an enhanced sense of responsibility is engendered in your staff.

"Before leaving the apprentice and the journeyman, I should like to say a word or two on the subject of technical education so far as it affects printing. At considerable expenditure of time and money some of all grades of employed attend technical classes with the laudable object of making themselves more fit for the positions which they hold and incidentally preparing themselves for advancement. This has been going on now for many years, but who among us attaches importance to the certificates which are granted? True they are indicative of attendance at those classes; but they cannot be accepted as *prima facie* evidence of ability. Teachers may be, and no doubt are, masters of their respective branches, but something more than that is requisite in an instructor. There is an art in imparting knowledge which needs much training for its acquirement and without which a man cannot be an

efficient instructor. From my own observation our technical instructors are lacking in this regard. Here again, the active personal interest of the practical master is urgently desirable. If time could be spared, your influence and authority would be most valuable and, I have reason to believe, appreciated.

"The selection and employment of journeymen, whilst necessitating great care and judgment, is nothing as compared to that of selecting a man for the responsible work of supervision. What commonly happens is that, requiring such an assistant, you either make choice of one of your own staff, or engage one from outside whose credentials satisfy you. Your requirements, broadly speaking, being undoubted technical skill and experience, coupled with general dependability. But I venture to say that much more than these excellent characteristics are necessary to make a successful fogleman; they must be supported by some business training. It is, however, unfortunately the fact that we find, nine times in ten, the aspirant is not that conspicuous success in his higher sphere which he might well have been had he had the advantage of knowing what business training such a position was likely to call for. Consequently, we frequently find that, instead of the man filling his new position with credit to himself and satisfaction to his employer, he has given up a situation where he at least had peace of mind, for one which has brought anxieties and difficulties which he is unable to handle with confidence. I venture to say that more men selected as overseers are unsatisfactory for this reason than for any other. My suggestion is, that any man, to be a success in such a position of trust and responsibility on the technical staff of a printing works, must first be a skilled craftsman in his own particular branch, and must have also a nodding acquaintance with the technique of other branches. Next, he should have acquired a working knowledge of accounts. Not that he is likely to be called upon to act as ledger clerk—his services being too valuable—but in my opinion, no one is in a position to understand business principles and appreciate how every step is affected in some way, unless he is equipped with the knowledge to which I have referred.

"It goes without saying that he must be acquainted with the provisions of the Factory, Workmen's Compensation and Health Insurance Acts, at least, so far as they affect his department, but, what I stress as of far greater importance is a good working knowledge of those customs which govern business procedure and are covered by the Sale of Goods Act. I opine that even among those who order goods with subconscious prudence, many do so without really knowing what the exact rights of the parties to the transactions are and how to proceed so that the rights of their principals be guarded.

"What I suggest as being necessary, requires no heroic effort on the part of any ambitious person to acquire; the intelligent use of a few evenings or some of those dreary dinner hours, being sufficient for the purpose. It will be objected that such men are not to be found—you wish they were. I quite agree; employers who have such, naturally hang on. But you each and all are in the position that you may need a fogleman to-morrow, and certainly will some time in the near future. Very well then, set to work and train a few. To which suggestion you will probably demur, saying, 'Why should I train a man for another to benefit by, and perhaps a rival employer?' The answer is obvious. The little trouble you take will be repaid whilst the man is in your employ by more and better service, and also by the knowledge that you have done the right thing in being instrumental in his obtaining an advance in life when he leaves you.

Cost-Finding.

"The last matter which I propose to trouble you with will probably prove the most controversial; it is the subject of cost-finding. In dealing with this I am unfortunate in having to commit the heresy of somewhat disparaging the system whose foster parents are the M.P.A., who, like all loving parents, can see no wrong and can tolerate no suggested improvement in their bantling! I for one fail to find any material difference between mercantile accounts and factory accounts. Consequently, I am of opinion that factory accounts should be kept on the same system as mercantile accounts—a system which has stood the strain of all countries and all undertakings, however complicated, and has not yet failed through want of

adaptability and which can be audited by any competent person who understands book-keeping. If factory accounts are kept in the ordinary double-entry manner, they will not only furnish you with the actual hour cost, but other useful information is readily deduced. Moreover you have an elastic system adaptable to the progressive changes of workshop conditions. There is no juggling necessary, and none possible. Further, it is not expensive to work. For instance, in the case of a factory where the costs aggregate 8s. 1d. per minute, the whole of the factory accounts, statistics and wages are handled efficiently by one clerk.

"There is, however, one great difficulty in keeping factory accounts which is not due to the system adopted but is generally the fault of the principal or his accounting department, in withholding some, and delaying other, necessary information as to the expenses connected with the works of which they alone have cognisance. Whether this arises from professional jealousy that mere 'works persons' should have the temerity to know anything of the holy rite of book-keeping, I do not know; but it exists and does more to wreck the accuracy of any system than anything else.

"I should be ill-advised to enlarge on the subject beyond saying that by opening works ledger accounts for each of the technical departments, and also for non-technical units, such as works office, maintenance, lift, power, etc., and charging those accounts with all the expenses which properly belong to them, you have a true statement of cost for each unit instead of using that blessed but misleading word 'general' expenses. When all expenses are so posted, you have the simple journal transfer entry, Sundry Accounts Dr. to Sundry Credits, and all is shipshape and you are not left guessing. So successful have I found this plan that my man can produce for me a trading account down to the end of the preceding quarter within ten minutes of his being able to obtain of the counting house the few figures required of them.

A Co-operation Proposal.

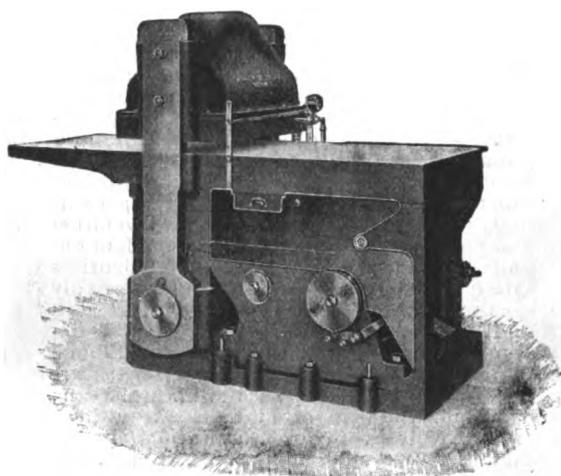

"There is just one other point which strikes me: namely, the waste of energy and capital involved by all printers of necessity having to do all classes of work. Obviously, you cannot refuse an order, but quite a large proportion of orders accepted do not fit your particular organisation or plant, and there is no profit in the job for you and perhaps a loss, whereas, some other member of your association is fitted for producing the work at a sufficient margin of profit to pay himself well and yet leave a commission for you. Is it not a feasible suggestion that each member gives your secretary a note of the kind of work his plant is particularly well suited to turn out, and then, instead of each attempting work, which is at best a nuisance, he would be in a position to put out the job, not only helping himself but a fellow member of the Association, and what is more important still, giving complete satisfaction to the customer. I must say, right here, that I am confident from a long experience, that the utmost good faith is observed among master printers in carrying out trade work. I wish I could say the same with regard to some of the printers' suppliers!

"I am quite aware that I have not said anything new in connection with printing, but this I am confident in asserting, that printing is a craft which taxes the skill, patience, business acumen and enterprise of all engaged in it, that it is a craft to which civilisation owes much, and which has contributed not a little to the happiness of mankind. If this be conceded it naturally follows that each and every member of our craft is well advised to add his quota towards its 'betterment' without regard to whether such 'betterment' be for employer or employed."

Mr. Wise, before opening the meeting for discussion, expressed gratitude for the useful hints which Mr. Cosh had stated, especially those alluding to the apprentice on the probationary period before the signing of indentures, and the humane thought for the messenger. With reference to the F.M.P. Costing System, Mr. Wise stated that he would first like to have the opportunity of seeing Mr. Cosh's system before entering into the fray of discussion. He then thanked Mr. Cosh for his admirable discourse.

Several members having raised questions on points in the address, Mr. Cosh gave more definite details as to his system and the friendly criticisms developed into a thorough heart-to-heart talk which was greatly appreciated.

Swiss Manufacture.

Can be seen running in London and Provinces.

WINKLER Automatic Moulding and Drying Press

For Newspaper and Fine Art Moulds, *Dry and/or Wet Flong*,
 Hot or Cold. With Electric or Steam Heating.

Improves the moulding results.
 Equals in capacity 3 Pneumatic Presses.
 Eliminates the Mangle.
 Restricts Moulding and Drying to one machine.
 Saves type, time, labour, power and fuel.

Produces, in conjunction with Light's
 "PHOTO-TONE" Fine Art Flong,
 Half-tone Matrices of finest screens so
 accurate that Stereos cast therefrom are
 facsimile to originals.

Trade Notes.

LONDON WAGES SETTLEMENT.—The ballot of the National Society of Operative Printers and Assistants, proceeding as we went to press last week, resulted in the acceptance of the proposed reductions. Thus settlement has now been reached with all the unions on the basis of a reduction of 6s. a week—with the one exception of the Correctors of the Press, whose complete acceptance is subject to confirmation by special meeting.

PENNY POSTAGE QUERIED.—In the House of Lords, on Friday, Lord Southwark asked if there were any reasons, beyond those of revenue, why, in the interests of trade and commerce, the penny postage should not be restored immediately, instead of waiting until the end of the financial year. The Marquis of Salisbury said he would take care that the message of Lord Southwark was conveyed to the Postmaster-General. The financial position of the country was such that it was not desirable to try any doubtful experiments. If it appeared that trade would be improved without any additional burden being thrown on the Exchequer, he had no doubt the Postmaster-General would consider favourably the suggestion made.

ELECTION PRINTING INADVERTENCE.—The Labour member for Eccles, Mr. John Buckle, and his election agent, Mr. William Watts Rogerson, applied to Mr. Justice Sankey, in the King's Bench Division, last week, for relief under the Corrupt and Illegal Practices Act, 1883. The relief sought was in respect of printing and publishing certain circulars headed "Eccles Division Parliamentary Election" and addressed to shopkeepers of Eccles division, which circulars failed to bear the name and address of the printer and publisher, contrary to the Act. Evidence having been given to show that the omission of imprint was purely inadvertent, the Judge granted the order for relief asked for.

JOURNALIST'S SALARY.—Judgment was given in the London Sheriff's Court, on Thursday, for £180 12s. and costs against Sunday Publications, Ltd., owners of the *Sunday Illustrated* and the *Sunday Sports Telegram*, for the wrongful dismissal of the acting editor of both journals. The jury awarded six months' salary in lieu of notice, less the amount earned by the plaintiff elsewhere during that period.

At Maidstone Gaol where George Lee Bevan, the city financier has arrived, to serve ten years' penal servitude for company frauds, it is expected that he will be set work in the printing department with other convicts of the "star" class.

CHARGED on his own confession with the theft of £101 from the Christmas Club of the workers of Blades, East and Blades, of Shore-ditch, Ernest James White (40), engraver, was at Old-street last week given six months in the second division.

NEW DUBLIN PRINTERY.—Large premises in Parkgate-street, Dublin, known as the Shell Factory, have been acquired by Messrs. Cahill and Co., Ltd. It will be remembered that Messrs. Cahill's factory on Ormon Quay was totally destroyed by fire last February. Owing to the greatly extended nature of their business, the site of the old factory was too restricted in area to allow of reconstruction. It is understood that their new factory in Parkgate-street will compare favourably with any in Great Britain.

MR. COLLINGWOOD HUGHES, M.P., gave an interesting lecture to the Coventry Engineering Society on Friday, the 15th inst., upon "The Making of a Modern Newspaper." Mr. A. E. Feltham presided. The lecturer said that a newspaper differed from other manufactured productions, as it was practically scrapped every day and a start made on something fresh. During the last fifty years something like 250 attempts had been made to found and institute daily and weekly newspapers in Great Britain—big attempts, backed by considerable capital, and yet to-day, speaking of big journals, the survivors might be counted on the fingers of two hands. In his opinion, much more money had been lost in founding newspapers than had been made. One great essential was perfect organisation, and he proceeded to describe in detail the various departments through which the production had to pass, from the reception of news to the actual printing and distribution. Votes of thanks were passed to the lecturer and chairman.

We are requested by Mr. John Fry, the proprietor of Fry's Metal Foundry, having branches at Manchester, Bristol, Dublin, Glasgow and Hendon, to state that neither his firm since its inception, nor himself personally, has been connected, financially or otherwise, with any other firm selling printing metals.

We regret to chronicle the death of Mr. Alfred D. Phelp, of the firm of A. D. Phelp and Co., of Leyton. Mr. Phelp was a well-known worker in the East and North-East London Master Printers' Association, being hon. treasurer (formerly hon. secretary) of the Association, and a member of the executive council of the L.M.P.A. At the funeral service and interment on Monday the L.M.P.A. was represented by Mr. J. Johnson (the secretary being prevented by an important meeting), and a wreath from the London Master Printers' Association was amongst the floral tributes received.

MR. ALFRED TURNER, formerly editor of the *Yorkshire Evening Post*, died last week at the age of 49. He became connected with Carmelite House about ten years ago, and at the time of his retirement in 1920 was acting editor of the *London Evening News*.

THE death is announced of Mr. Harry S. Mogford at the age of 66. He had been associated for many years with the *Morning Advertiser*. He was for some years sporting editor of the *Sunday Times*, and had been connected in sporting matters with many other journals.

A VERDICT of "Suicide whilst of unsound mind" was returned at an inquest last week on George L. Stephenson, retired newspaper proprietor, of Paddington, who was found in a Taunton hotel with his throat cut.

LATEST WILLS.—Mr. Alfred Edward Thomas Watson, for some years racing correspondent of *The Times*, editor of the *Badminton Library* and the *Badminton Magazine*, and formerly editor of the *Illustrated Sporting and Dramatic News*, £4,261.—Mr. Benjamin Robert Marten, of Sudbury, Suffolk, printer and stationer, died October 13th, £3,685.

MR. HUGHES states that he is issuing a writ for £10,000 damages against the *Sydney Daily Mail*, and that he is taking criminal proceedings against its editor and the writer of an article in that journal.

THE printers' strike, owing to which for over three weeks publication of all non-Socialist newspapers in Lausanne, Berne, Basel and St. Gall has been suspended, has ended in the acceptance by the strikers of the employers' terms, with the exception of Lausanne.

Trade Union Matters.

THE Typographical Association announces details of an agreement come to with the Christmas Card Manufacturers' Association at Blackburn, whereby the case piece rate has been reduced by $\frac{1}{4}$ d. per thousand, leaving the rate at $3\frac{3}{4}$ d., as against 2d. pre-war rate; and for linotype inset rates a reduction of $\frac{1}{4}$ d., making the present rate $1\frac{1}{4}$ d. per thousand. It has been agreed to drop all the existing overtime clauses, and to substitute the rates in the National Agreement, and the employers agreed to the application of the Hours and Holidays Agreement.

"NATSOPA" ITEMS.—At December quarterly meetings all branches of the National Society of Operative Printers and Assistants are considering the advisability of establishing superannuation benefit for aged members of the Society. They are considering also the following resolution:—"That this branch meeting endorses the action of the executive council in directing that the Society's political candidate, Mr. G. A. Isaacs, be again placed at the disposal of the Gravesend constituency as the prospective candidate in the Labour interest." Another resolution put forward is:—"That the branch meeting appreciates the exceptional service of the *Daily Herald* during the recent General Election, and calls upon every member in the branch to purchase the *Daily Herald* and assist its circulation in all ways possible, in view of the fact that it is now the official organ of the Labour movement and maintained by the joint efforts of the Trades Union Congress and the Labour Party."

Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

The December gathering of the Association was held on Tuesday of last week, the meeting having been called a week earlier on account of the Christmas holidays. The venue was St. Bride Institute, Bride-lane, E.C.4, and in the absence of the president (Mr. A. Chadwell), Mr. J. S. Sunderland was voted to the chair.

Mr. W. Bullett said he had been deputed to convey to the meeting the apologies of the president for his unavoidable absence.

The minutes of the November meeting having been read and confirmed, several items of correspondence were submitted. Among these was a letter from Mr. J. R. Riddell inviting the secretary to the platform at the craft lecture to be given by him at the Stationers' Hall on the 15th inst. A letter was also read from a candidate applying for membership. Regarding this letter the meeting decided that the matter of the candidate's election as a member be left with the secretary to report at the next meeting.

The chairman then announced that Mr. A. E. Wood had kindly promised to take the chair at the next Auxiliary concert in February. In order to raise money on behalf of the Printers' Pension Corporation, Mr. Wood had inaugurated a scheme to send round to the various chapels a number of gold watches (which had been purchased at cost price) with the view of each chapel raffling for them. Mr. Wood had expressed the wish that overseers in the different foundries would co-operate with the fathers of chapels in this particular effort.

With regard to the Association's social policy, an interesting note was struck by Mr. H. Crossland, who mentioned the social benefits derived from the Overseers' Guild attached to his own firm to which he belonged, and expressed the belief that a much stronger social policy should be adopted by their Association. Such a policy, he thought, would be conducive to getting the members to know one another better. He therefore proposed that an informal dinner be held early in the new year.

The motion was seconded by Mr. J. Craske and carried, the latter gentleman expressing the wish that the function be held on a night other than Saturday, so as to give members who could not come to the annual dinner an opportunity of attending; it was also agreed that the matter be placed on the agenda at the next monthly meeting for further consideration.

The chairman—who is the electrotyping and stereotyping instructor at the new London Printing School—before closing the meeting, invited any criticism that the members felt inclined to offer with reference to the methods now adopted in training the students. So far, he had found the work at the School most interesting.

No criticism was forthcoming from the members, most of them being of the opinion that it was far too early to know much about the School, as it had not yet got properly going.

The meeting was then brought to a close.

Mr. J. R. Riddell Highly Honoured.

Medal from the Stationers' Company.

A rare and coveted distinction was bestowed upon Mr. J. R. Riddell, the well-known principal of the London School of Printing, when the Master of the Worshipful Company of Stationers presented him on Friday evening with the silver medal of the Stationers' Company. The occasion was the lecture by Mr. Riddell on "The Training of the Craftsman" given at Stationers' Hall as one of the series of craft lectures arranged by the Stationers' Company and Printing Industry Technical Board.

The chair was to have been taken by Sir L. Amherst Selby-Bigge (Permanent Secretary of the Board of Education), but the Master of the Stationers' Company (Mr. Herbert Fitch) opened the meeting and explained that Sir Amherst was unable to be present, being temporarily confined to his bed by illness, but that he sent in his stead a representative of the Board of Education, Mr. Davies, who had been good enough to come at short notice. Mr. Fitch accordingly vacated the chair to Mr. Davies. Also present on the platform, besides Mr. Riddell, were: Mr. R. T. Rivington, M.A., LL.B. (clerk of the Stationers' Company), Mr. R. A. Austen-Leigh (president, Federation of Master Printers), Mr. A. E. Goodwin (secretary, Federation of Master Printers), Mr. T. E. Naylor (secretary, London Society of Compositors), Mr. Woodgate Stevens (London secretary, Amalgamated Society of Lithographic Printers), and Mr. A. E. Holmes (Inspector, Board of Education).

There was a good attendance, including many well-known in the trade, and added interest was given to the meeting by the provision of displays of work in printing and bookbinding done by students of the London printing technical schools.

The Chairman, in the course of his remarks, said that when the proposal to remove from St. Bride to better accommodation south of the Thames was before the Board of Education in its financial aspect, a point that assured the scheme of sympathetic consideration was the fact that it came forward as a proposition backed both by the master printers and by the various organisations of workpeople—and not merely backed by pious opinions but by the solid evidence of a very substantial cash contribution year by year.

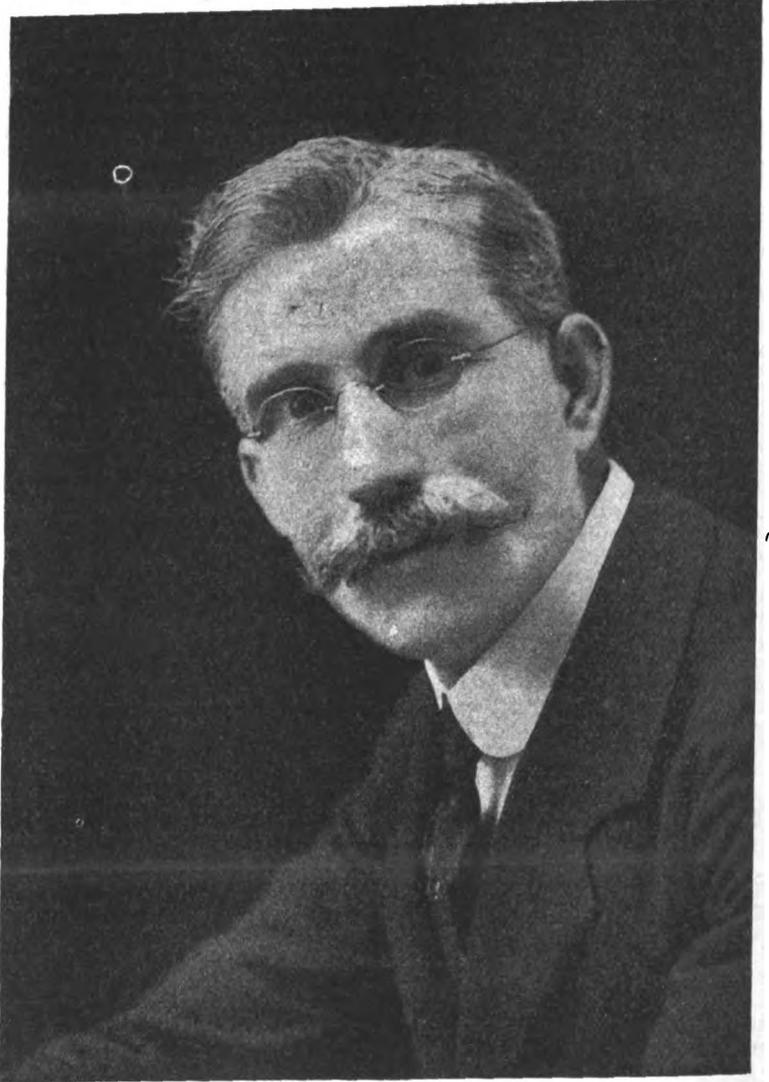

Mr. Riddell then delivered his lecture, which was followed with much interest, and covered a wide field, the main sections being devoted to the discussion of the seven-year apprenticeship; the selection, education and training of apprentices; the need for a well-educated boy as an apprentice; educational activities of the Stationers' Company and the London printing trades; technical tests; a proficiency certificate as a qualification for membership of a trade society; and the development of the craft spirit. Pressure on our space compels us to hold over to next week's issue a report of the lecture itself.

The Presentation.

At the conclusion of the lecture the Master of the Stationers' Company spoke in very high appreciation of Mr. Riddell's remarks, saying that a splendid educational scheme had been outlined most skillfully and eloquently. He only regretted that in his own apprenticeship days nobody had a scintilla of an idea of such training for apprentices. Mr. Fitch proceeded to relate some interesting reminiscences of his own apprenticeship. He laid great stress on the educational value to himself of Johnson's "Typographia," and in recommending that ancient classic to students of to-day, he said that in his opinion it had in some respects never been supplanted or exceeded by anything that had come out more recently. He recalled also his starting business on his own account immediately on finishing his time, and of being successful in making in the first year a profit of £300. Mr. Fitch then proceeded to say that it now fell to him to do a thing which he was very proud to do, and a thing which he would look back upon with very great pleasure—to render to Mr. Riddell a tribute from the Stationers' Company. However unworthily he (Mr. Fitch) represented that great and historical Company, he was, so to speak, an epitome of its 500 years' history, and through him the company's 300 liverymen, its large number of freemen and not least the Court of Assistants, all these

through him made recognition on behalf of the Company of Mr. Riddell's great work in the interests of printing. Mr. Fitch went on to outline the many activities in which Mr. Riddell had been engaged. Largely owing to Mr. Riddell's efforts, the London School of Printing was founded. Mr. Riddell became the first whole time principal of St. Bride in 1912 with 400 students attending. Now there

interesting references to apprenticeship conditions at different stages in the history of the craft. He said that everybody in the printing trade, at any rate in London, knew Mr. Riddell and the admirable work he had done in educating the printing youth of this country, not only apprentices and journeymen but budding master printers as well. Mr. Riddell had also done most sound and excellent work in re-

Mr. J. R. Riddell, Principal of the London School of Printing.

were 1,500—was not that proud testimony? (Applause.) That alone might be considered a life-work, but Mr. Riddell was doing a great deal more. He went on to indicate other of Mr. Riddell's services to the trade, the organising of the series of craft lectures, his work as hon. secretary of the Livery Committee of the Stationers' Company (heard Mr. R. A. Austen-Leigh having been leading spirits in the founding of that committee), his successful efforts in introducing to the Company a number of liverymen who are leaders of the printing trade in London and the provinces, his work as one of the principal movers in the scheme for a joint board of the Stationers' Company and the printing trade to conduct examinations at Stationers' Hall, and his success in organising a useful series of lunches for the liverymen of the Company. The Court of Assistants had taken into consideration Mr. Riddell's services not only to the Company but to the printing craft generally, and had decided to recognise them by presenting a medal as a tribute of the Company's high acknowledgment of the great work done. (Applause.) The medal, he said, bore the inscription: "Presented to Mr. J. R. Riddell, citizen and stationer, in recognition of valuable services rendered to the Worshipful Company of Stationers and the craft connected with it. 15th December, 1922." Only one medal had previously been given, and it was presented only in cases of outstanding merit and services. (Applause.)

At this point the meeting was thrown open for questions on the lecture, and questions by Messrs. F. Colebrook, V. Pitman, J. Acton and others were asked and answered.

Mr. R. A. Austen-Leigh then proposed a hearty vote of thanks to Mr. Riddell for his lecture, and in the course of his speech made

vitalising the livery of the Stationers' Company on educational, literary and social lines.

Mr. T. E. Naylor cordially seconded the motion. He remarked that though there were one or two points concerning which he would like a few words with Mr. Riddell, especially with regard to the seven years' apprenticeship, he found himself in general agreement with what had been said. From personal observation he could say that Mr. Riddell had done wonderful work for technical education in London. He was glad to have the opportunity of adding his testimony to that of others in recognition of Mr. Riddell's services.

Mr. Riddell then returned thanks for the presentation, for the tributes paid him by the speakers, and for the cordial reception accorded by the audience. He found it very difficult, he said, to express his appreciation of the distinguished honour which the Stationers' Company had conferred upon him. He asked the Master to convey to the Court of Assistants his heartfelt thanks. The honour was particularly pleasing to him at the present time. As happened probably to every one at some period or other, he had lately been feeling pretty well "down" as the result of little differences and discouragements which seemed big at the time. This mark of appreciation would give him fresh incentive and encouragement to go ahead. He was also delighted to have the good opinion of such leaders of the printing craft as Mr. Austen-Leigh and Mr. Naylor. To one and all he expressed his thanks for the kind reception given. He concluded by moving a hearty vote of thanks to the chairman and to the Master of the Stationers' Company.

A brief response from the chairman brought the proceedings to a close.

To the above may be fittingly appended a short biographical sketch of Mr. J. R. Riddell, written by one who has known him for some years.

MR. J. R. RIDDELL.

(By One who Knows Him.)

The subject of our sketch, like many notable men, is an Aberdonian, and first saw the light of day in the "Granite City" in 1874. Apprenticed as a printer to Messrs. Taylor and Henderson, he passed through the usual routine of a busy provincial office, and acquired a fundamental grounding in various classes of commercial work. His irrepressible energy was apparent even in these early days, his spare time being usefully devoted to the study of art (for which he held a scholarship) and in the more physically vigorous pursuits of gymnastics, running and swimming.

His first journey from home, after completing his apprenticeship, took him to Edinburgh, where, with Messrs. A. B. Fleming and Co., of Caroline Park, the colour and printing ink manufacturers, he came in close touch with colour in its different phases, and in particular with the then new process of trichromatic printing before it became a commercial proposition. After some years of experience in this class of work, he took up various positions in the Midlands, London, Hertfordshire and Yorkshire, for the purpose of obtaining as wide an experience as it was possible to obtain, eventually going to Messrs. Thos. Forman and Sons, of Nottingham, the well-known printers. Here his experience in colour and process work was soon applied to the reproduction in monochrome and colour of high-class art subjects; the works were reorganised in line with modern requirements, and during the eleven years he was with this firm Mr. Riddell became recognised as an authority on all matters appertaining to modern methods of printing. A visit to America, for the purpose of investigating printing organisation and methods, greatly added to his extensive knowledge of the craft and enlarged his naturally acute vision.

During the past eleven years "St. Bride" and "J. R. Riddell" have been almost synonymous terms. Those who really knew that Institute before he took up his position of principal of the Printing School are better able to appreciate the changes which have taken place to the advantage of technical education for the printers throughout the city. It was vitally necessary that some one possessing personality, indomitable will, and having the necessary experience should be found; one who could lift it out of the ruts, and place it in the position of being a school worthy of the staple craft of the greatest city in the world. St. Bride was fortunate in securing his services, and the history of this school during the last decade speaks for itself. So virile did it become that the enrolment of individual students rose from 400 to 1,500, and the spirit of progress and camaraderie was a delightful source of inspiration to all who were associated with the School. As time went on it became increasingly apparent that the printing school was rapidly outgrowing its quarters at St. Bride Institute, and those associated with Mr. Riddell in the self-denying work of education had to look round for increased support and wider accommodation. This resulted in a movement to establish an entirely new printing school. The first idea was that a capital sum of money should be raised and given to St. Bride Foundation for the purpose of printing school development, but it soon became apparent that the Governing Body was not entirely sympathetic to the movement. Ultimately, a trade committee, with Lord Riddell as chairman, decided to approach the London County Council to provide facilities for the technical training of those engaged in the printing and kindred trades, with the result that London now possesses a School of Printing which claims to be second to none in the world.

Mr. Riddell's craft interests are of a wide and sympathetic nature; he is ever on the alert to help forward any scheme of craft advancement or technical education, not only in London but throughout the kingdom. It is questionable if the enormous amount of work he has done on behalf of disabled ex-service men is fully understood. Many of these men have to thank Mr. Riddell for a fresh start in life; by his encouragement and practical interest they have been placed on their feet again.

He is keenly interested in the traditions of the City of London, of which he is a Freeman. He is a Liveryman of the Stationers' Com-

pany, and as hon. secretary of the Stationers' Livery Committee and Technical Board—the latter being formed to deal with the examination of students in printing subjects and for the promotion of craft lectures—he has rendered invaluable services to the Company and to the printing craft. He is also a member of the Governing Body of the Stationers' Company's School.

Perhaps the best finish to this article would be to repeat, as far as memory will allow, a pen sketch of the man made a few years ago:—"A keen judge of character, outspoken to brusqueness, intolerant of cant and humbug. A reliable friend, often found championing unpopular causes when convinced that they are right. Generous to a fault, but, like many generous-hearted people frequently impatient though never bearing malice. Always on the side of the 'bottom dog' when that dog wants to improve his position—as many a printer knows who owes to Mr. Riddell his first assistance up the ladder of success. Ever ready to take up the cudgels on behalf of those who work with him, he will tell them their faults with brutal frankness, but will not allow others to speak ill of them. He is, in fact, a humanitarian—always ready to find an excuse for human frailties, and always ready to lift up one who is down; or to help push along any really good cause."

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9 1/2-in. wide; machine for Power.—Box 13996.

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2 1/2-in. up to 8 1/2-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch 1/4-in.—Box 13998.

ONE 8-CROWN 2-REV. HUBER PERFECTING PRESS, with Cross Auto-Feeder; complete with Rollers and Counter/S.

ONE 2-REV. PERFECTING PRESS, by Jules-Derriey, will cut off from reel, print and deliver flat or folded as required from 25-in. by 40-in. to 62-in. by 44-in.; hand feeding if required.

ONE 8-CROWN WHITLOCK MACHINE.
TWO DEXTER FOLDING MACHINES, 22-in. by 38-in. to 42-in. by 61-in., three and four folds; fitted Auto Feeder.

ONE 39-in. SELF-CLAMP GUILLOTINE, by Wm. Dawson and Sons.

ONE 38-in. DITTO.
THREE EX-QUAD ROYAL WHARFEDALES by Wm. Dawson and Sons.

60 CROWN FOLDER CHASES, 22 1/2-in. by 15 1/2-in. inside.

32 DEMY FOLDER CHASES, 24 1/2-in. by 17 1/2-in.

150 WROUGHT CHASES, 26-in. by 18-in.

150 DOUBLE FOOLSCAP CHASES, 29-in. by 19 1/2-in.

150 CAST CHASES, 26-in. by 18-in.

400 BILL CHASES, 2 pp. Foolscap Folio.

6 pairs FOUNT CASES, 42-in. W. by 23 1/2-in. by 3 1/2-in. deep.

4 pairs FOUNT CASES, 32-in. W. by 24-in. by 2 1/2-in. deep.

Some Single and whole **FRAMES, IMPOSING SURFACES, WOODEN GALLEY RACKS**, etc.

Immediate delivery can be given.—Spottiswoode, Ballantyne and Co., Ltd., 1, New-street-square, London, E.C.4. 14023

SMYTH-HORNE, LTD.,
 1-3, Baldwin's-place,
 Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing; Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

FOLLOWING Machines are required for immediate delivery:—

New or Secondhand **FLAT BAG MACHINE** for producing 1, 2, 4, 6, 12, 20 lbs. bags.

Secondhand Machine for **CONE-SHAPED BAGS** for 2 and 4 oz.

Secondhand "**LINOTYPES**," preferably Multi-magazine.—State prices and full particulars to Box 14021.

Miscellaneous.

LAST OPPORTUNITY, only 1,000 left; Daily Tear-off **CALENDAR PADS**, size 3 1/2-in. by 2 1/2-in.; well printed, good mottos; price 4 1/2d. each.—Specimen sheets from E. N. Mason and Sons, Ltd., Arclight Works, Colchester. 14025

Presentation to Mr. Frank Lloyd.

Another interesting function in connection with Mr. Frank Lloyd's business jubilee took place at the London offices of Edward Lloyd, Ltd., 4-7, Salisbury-court, E.C.4, on Friday, December 8th.

Some sixty members of the offices and wharves' staffs attended, when Mr. Harry Smith, whose own length of service with the firm has extended to 27 years, made a sympathetic little speech in handing over a handsome mahogany filing cabinet as the gift of all concerned.

Mr. Frank Lloyd, who was accompanied by Mr. E. H. Raynham, Mr. Percy G. Denson and Mr. Herbert Clarke (directors), replied in happy and humorous vein, evidencing again the close personal interest which he, together with Mrs. Lloyd, has always taken in the welfare of the employees in all departments of the business.

The cabinet was inscribed: "Presented to Frank Lloyd, Esq., by the London Staff and Employees of Edward Lloyd Limited as a mark of esteem on his completion of 50 years of business life, 1872-1922."

THURSDAY, DECEMBER 21, 1922.

Christmas Greetings.

A YEAR ago Christmas came as a grateful break in a period of deep trade depression. It has taken the greater part of the past twelve months to ease that regrettable condition of things. It is true that the state of commerce is not all that could be desired; but there is no doubt that the cycle of conditions is moving round and the period of depression lifting at last. Expert opinion is now much more optimistic than it was, and there are concrete facts which confirm this view. In all the allied industries signs of revival are to be seen, although they may not be very conspicuous. Of course, the fact that it has taken over twelve months to move forward so small a distance indicates that progress has been slow. At the same time, it has been sure, and the industries of this country are gradually getting upon firmer ground. For the moment, however, the machinery is slowing down for the Christmas vacation; but when this is passed there is every prospect that brighter days will have arrived. In such a spirit of hope, therefore, and with thankfulness for the blessings of the past year, we can all turn with cheerfulness to the festivities of the season of goodwill. To that end we wish our readers A HAPPY CHRISTMAS AND A PROSPEROUS NEW YEAR.

The New P.M.G.'s Poor Start.

THE whole of the printing trade will doubtless share our regret at learning that the new Postmaster-General, Mr. Neville Chamberlain, has apparently no intention of immediate action in the matter of withdrawing the present unreasonable restriction upon the nature of the five words admissible on a picture post card bearing a halfpenny stamp. This restriction, whilst of very doubtful benefit to anybody, is an obvious hardship to the picture post card industry and to the public, inasmuch as the distinction between five words of a general character and five words of "courtesy or convention" is a distinction which even Post Office executives, to

say nothing of the general public, cannot make with confidence. It is to be hoped that Mr. Chamberlain may see his way to look into this matter early in the new year instead of waiting until another six months of restriction have given further cause for annoyance to the victims of Post Office surcharges and have had further industrial ill effects by delaying the resuscitation of the picture post card trade.

Imported Advertising Matter.

THOSE who keep an eye open for paper and print movements will observe that a much greater amount of advertising matter is coming in from abroad. Until recently the bulk of it may have been printed and issued from foreign sources in the interests of English houses incensed at our own high printing and postal rates. Fortunately, the home advertiser has already discovered that other things more important than postal economy are involved in this utilisation of foreign service. We have seen the largest users of publicity revert to English practice purely in their own interests. That by the way, however. There is still an influx of foreign mailage, and what interests us most is the increased use of new methods of printing which incidentally imply certain types of paper. It will be observed that the photogravure process is being widely applied to illustrated catalogues, the whole of the matter, including small type, being printed from the photo-mechanically produced plate. Such a catalogue printed by letterpress methods would be an imitation art or a cheap coated paper. What is being used mainly for the photogravure process is merely a smooth surfaced "news," and the results are quite good. Any defects that exist, and there are some palpable ones, have to do with the printing rather than the paper.

Latex in Paper.

DISCUSSING the subject of latex with various paper men, the general opinion seems to be that more practice is necessary before arriving at definite conclusions. Some mills have used incorrect methods and arrived at a too hasty judgment as to the effect of rubber latex on mill routine and the finished product. Others have experimented more thoroughly and secured satisfactory results up to a stage. The chief doubt is as to ultimate effect on the paper and the influence of latex content on repulping. In the meantime, in their own interests, the promoters of the process should guard against creating over-estimation of the virtue and progress of paper containing rubber latex solution. The process is really in an embryo stage, full of possibility without a doubt, but not yet sufficiently advanced or established to have any special market of its own. The danger is that public interest, which is notably short-lived, will wax and wane before the process ripens into maturity.

Paper Merchants' Offer.

TWO or three wholesale houses are offering special allowances on orders received from now to the year end. The object is apparently to get clear of current stocks and start up fresh as far as possible. There are some houses anxious to standardise their stocks preparatory to issuing comprehensive sample books. The keen paper buyer on the look out for bargains is presented with an opportunity which may not come again.

THE Rumanian Government has nominated a committee to regulate the distribution of paper and prices. This committee decided that news paper is not to be affected by rise of prices of other kinds. Cellulose makers have been authorised to raise prices 5 per cent. to balance the depreciation of currency since July 15th.

VISCOUNT BURNHAM, C.H., a past president of the Institute of Journalists, was the guest of the members of the North-Eastern District of that organisation on Wednesday of last week at the dinner in aid of the Institute's Orphan Fund.

SIR ARTHUR SUTHERLAND gave the toast, "The Institute of Journalists' Orphan Fund," and had some interesting remarks to make upon the early history of printing in Newcastle, which city was the first in the provinces where the press was set up.

LORD BURNHAM'S visit to Newcastle was also signalled by a luncheon given in his honour by the independent business group of Newcastle City Council.

At the Press Club dinner on Saturday, the principal guests were Miss Irene Vanbrugh, Sir John and Lady Lavery, Mr. and Mrs. Josef Holbrooke, and Mr. Kenneth Barnes. Arthur Moreland was in the chair.

THE South-West London Master Printers' Association is inviting master printers to meet Mr. G. Eaton Hart, managing director of St. Clements Press, on Tuesday, January 2nd, at the Central Hall (Committee Room D), Matthew Parker-street, Westminster, S.W.1, at 6.45 p.m.

MR. G. A. ISAACS, writing in the *Natsopa Journal*, gives an interesting account of his fight as Labour candidate for Gravesend in the recent Parliamentary election. His experiences gave him great hope of future success in the Division, but, disgusted with the tactics of the great newspapers, he writes: "The deliberate and wilful misrepresentation of the Press, more especially the *Daily Mail* and *Daily Express*, fills one with absolute disgust."

MR. H. MORLEY, the editor and proprietor of the *Hucknall Dispatch*, is making good progress to convalescence after undergoing an operation in a nursing home at Nottingham.

MR. R. STANLEY THOMAS, of the staff of the *Cambrian News*, has been presented by his fellow-workers with a handsome dinner service on the occasion of his marriage to Miss M. Baldwin.

PRESENTATIONS have been made by the members of the companionship of the *Yorkshire Evening Post* to Mr. F. Blakeborough and Mr. G. Mountain, who for some years have respectively filled the offices of "father" and "clerk" to the companionship.

MR. T. H. CUNANE, of Messrs. A. M. Peebles and Son, Ltd., has been invited to give a series of lectures before the Manchester University, the Faculty of Technology, on the application of paper to printing.

ON the 29th ult. Mr. Cunane gave a lecture entitled from "Forest to Printing Works" before the Typographical Society at Batley, Yorks, and is due to repeat same at Stockport this month and at Hull in February next.

MR. C. PLUMMER, paper merchant, has removed from 29, John Dalton-street, Manchester, to his own premises at No. 40, Kennedy-street, Manchester.

MAKERS OF PLAYING CARDS.—The special design of the playing cards issued in connection with the annual banquet of the Worshipful Company of Makers of Playing Cards last week has reference to Ireland. In the centre are the arms of Ireland—a golden harp on a blue ground wreathed round by shamrocks. Underneath a ribbon bears the Celtic words "Erinn go bragh" ("Ireland for ever"). Embodied in the rising sun (the ancient Irish being sun worshippers) is a view of the old Irish Houses of Parliament, and in the foreground the Irish wolf-dog, another Irish emblem. Along the top are the arms of the four Provinces, the centre being filled with the Imperial Crown, emblem of supreme authority. The Company's arms occupy the centre of the lower border. A pack of these cards has been sent to the Governor of the new Free State and to the Duke of Abercorn.

Machine Rulers & Vellum Binders

BRANCH OF THE L.M.P.A.

Annual Dinner.

A very pleasing function in connection with this section of the L.M.P.A. took place on Saturday evening last at the Talbot Restaurant, London Wall, at the invitation of Mr. T. J. Hunt (the chairman), about forty sitting down to dinner. The proceedings were marked throughout by the utmost friendliness and cordiality, and those present, representing nearly every section of the trade in London, included Messrs. J. R. Burt (L.M.P.A. representative on this Section), J. Johnson (organiser, L.M.P.A.), J. Barton, W. B. Carter, J. Crofts, T. W. Garner, J. Heley, John Rissen, G. N. Wells and A. Willmott.

At the conclusion of the dinner and interspersed between the toasts were a number of well-rendered musical items, contributed by Messrs. F. N. Clark, Maurice L. Head and F. J. Wyatt.

The loyal toasts having been duly honoured, Mr. J. R. Burt proposed "The Machine Rulers and Vellum Binders' Branch of the L.M.P.A."

In giving this toast Mr. Burt said, having accepted the kind invitation of their chairman, and having partaken of their hospitality, it would have been ungrateful had he not endeavoured to do something in return. He did not know if they would like from him something jovial or serious, but he believed they were a body of men who were out to benefit their trade, and because of that he was sure they did not mind "talking shop," even round the festive table. As a printer he very much envied them in the position they found themselves in to-day. They seemed to have roped in pretty well every member of their trade. However, there were still some in their midst who did not yet quite toe the line. His (Mr. Burt's) section of the trade had a much larger number than they had, who were not doing this. Dealing with the difference in the status and social standing of many in his own organisation Mr. Burt mentioned that some of the members were employing thousands of men, whilst others only employed one man. From this they could see how difficult it was so to adjust the conditions in the trade as to secure what they in the North-west desired, proper profits for printers. Mr. Burt commended exceedingly certain members of the Machine Rulers and Vellum Binders' Branch of the L.M.P.A. for the very hard work they had put in in finding out their costs, and also for the loyal way members generally had followed and acted on their advice.

Difficulties the L.M.P.A. had to Meet.

He spoke to them as a poor representative of the L.M.P.A. on their committee. He confessed that the Association did not come up to the requirements that many of them expected of it, but he thought the majority of them did not know what the Association was up against in the arduous contests that took place from time to time dealing with 17 or 18 trade unionists round the table. He maintained that the council of the L.M.P.A. was composed of men who were as good business men as it was possible to find in any other trade. Whether there was a deputation asked for, or a concession, or whatever it might be, he thought that these matters should be put to their members in writing, and before an answer was given it should be referred to a body of expert men who could look into the questions at issue with the same light and with the same experience as those gentlemen who sat on the opposite side of the table. They did not blame those men for what they were doing, they were out for the benefit of their societies, and the benefit of their own societies was their own benefit. They were not likely to accept a reduction without questioning it, any more than if those present saw any of their customers' work going to someone else. He did not put this forward as anything more than a suggestion, but he thought a remedy would have to be found in the future if they were going to get anything like what they ought as a Council, considering the variety of interests they represented in the trade.

Value of the Association to the Trade.

Mr. John Rissen, in reply, thanked Mr. Burt for his encouraging words. He did not think a more worthy representative could be sent from the L.M.P.A. than Mr. Burt. They as an Association were still in their infancy, but they had done a great amount of work in a

very short time. A few years ago there was jealousy and sometimes bitterness existing among them, but he was very glad to say that that bad feeling had absolutely disappeared. The Association had been the means of combining them as a body of masters to help each other. After speaking of the great value of the price lists and the hard work entailed in their compilation by Mr. Hunt and others, Mr. Rissen concluded by remarking that they had learned to crawl, they would soon be on their feet and able to walk alone, and then he hoped they would commence to gallop.

"The Chairman."

Mr. H. R. Danford, in proposing the toast of "The Chairman," expressed his thanks to Mr. Hunt—who was also chairman of their trade society—for inviting them to that very interesting function. If it had not been for the efforts of Mr. Hunt he was sure their Association would never have existed. He remembered over four years ago Mr. Hunt calling all the members of their trade together to meet at "The Bull" in Holborn. At that time the members did not know each other; now they were glad to make each other's acquaintance. More than that, they met together to devise some means whereby they could raise the status of their trade, and one of the first things they did was to standardise their prices, so as to be just to themselves and to their own customers as well. Mr. Hunt was resigning from the chairmanship because he said he was getting old. He (Mr. Danford) said their chairman did not look old; he had as much to say as most of them, and he trusted he had not reached the end of his journey yet. They hoped to have his continued presence to guide and inspire them for many years to come. (Hear, hear.)

The toast was most heartily accorded, with musical honours.

Mr. Hunt, in returning thanks, referred to his retirement from the presidency in March. He was retiring, not because he was getting old like Methuselah, but because he thought it was wrong to monopolise the chair of an association like theirs. He was retiring to make room for what he believed was a better man. Mr. Danford was a man quite able to guide them on from where he had left off. He hoped they would spend many more happy meetings together and that the Association would still increase in prosperity.

Mr. W. B. Carter proposed the healths of Messrs. A. Willmott, G. N. Wells and J. Johnson, and spoke in appreciative terms of the efforts rendered by these gentlemen on behalf of the Association.

"The Stewards."

Mr. Hunt offered the toast of "The Stewards," Messrs. F. W. Garner, W. B. Carter and G. N. Wells, to whom he expressed his admiration for the excellent way in which they had carried out the proceedings that evening.

Mr. Wells briefly replied, and a most enjoyable and useful evening was brought to a close.

Warrillows, Ltd.

The Working Arrangement with De La Rue.

Presiding at the ordinary [general meeting of Warrillows, Ltd., in Birmingham, on Friday, Mr. Wm. S. Hooper, the chairman, referred to the universal trade depression, which had affected the printing trade not the least, and which the company had had to face. Allusion was then made to the re-organisation of the commercial side of the undertaking and the extension of premises.

Dealing with the company's investments, the chairman said the most important of these was the shares in Thos. De La Rue and Co., Ltd., one of the greatest printing and stationery undertakings in the world. He should not be explaining the position fully if he did not say that the De La Rue business had felt the depression, but he was not without hope that conditions were improving and that better days were in store. The working arrangement with the De La Rue Co. was working smoothly, and the beneficial effect contemplated was beginning to make itself felt.

After stating that the orders in hand were larger than they had ever been in the history of the company, Mr. Hooper said if they were to take full advantage of their greater opportunities it would be necessary in the near future to raise further capital.

DIVIDENDS AND REPORTS.

WATERLOW AND SONS.—The profit of Waterlow and Sons for the year ended September 30th amounted to £112,294, and £96,376 brought forward raises the total to £208,670. After deducting £73,950 for the preference, preferred ordinary, and interim deferred ordinary dividends, the directors propose a final dividend on the deferred ordinary shares of 10 per cent., making 12½ per cent. for the year. The balance of £65,720 is carried forward. For the previous year there was a net profit of £240,565, the dividend on the deferred ordinary shares was the same, and a sum of £60,000 was placed to reserve.

ARGUS PRINTING.—The net profit of the Argus Printing Co. for the year ended October 31st amounted to £22,291 (against £9,113), and with £9,477 brought forward, a total of £31,768 is arrived at. The directors propose a final distribution of 12 per cent., making 15 per cent. for the year (against 10 per cent.), and after placing £5,000 to reserve (against nil) the balance of £12,162 is carried forward.

CARRON GROVE PAPER, LTD.—Net profit for year ended October 28th was £31,642, plus £14,962 brought in. Dividend of 4s. per share, free of tax, and £22,683 carried forward.

ALBERT E. REED AND CO., LTD.—Accounts of Albert E. Reed and Co. for year ended March 31st, 1922, after providing for depreciation, interest on debentures, etc., show balance available of £15,192. Preference dividend absorbed £13,200, leaving £1,992 to be carried forward. Directors state that owing to enormous depreciation in value of raw materials, reserve of £150,000 made against forward contracts has been fully absorbed, and further heavy loss was incurred on raw materials in stock and delivered under contracts. In addition, demand for paper was so restricted that output of mills was only 60 per cent. of normal production. All stocks were written down to market values at end of year, and with mills running full time directors anticipate good results from current year. New mills at Aylesford were started up in August, and are now working very satisfactorily at full output.

NEW COMPANIES.

PHILLIPSON AND GOLDER, LTD.—Capital £30,000 in £1 shares (7,000 7 per cent. cumulative preference); to acquire the business of a bookseller, stationers, picture, fine art and fancy goods dealer, circulating library proprietor, bookbinder, printer, engraver, lithographer and publisher, carried on by J. T. Golder as "Phillipson and Golder," at 42,

Eastgate-row (South), 40, Eastgate-street, Old Bank-buildings, and 21 and 23, Frodsham-street, Chester. Private company. First directors: J. T. Golder, F. J. Warmesley, T. N. Philip, E. H. Davies, J. S. Hughes and A. S. Mawer.

F. SHARRATT AND CO., LTD.—Capital £6,000 in £1 shares (5,600 preference and 400 ordinary); box manufacturers, pattern card makers, printers, manufacturing stationers and bookbinders as formerly carried on by H. O. Field as "F. Sharratt and Co. Private company. Permanent directors: H. O. Field, G. L. Warwick, W. S. Wright and R. E. Woods. Registered office: 54, Wilson-street, Finsbury, E.C.

SMITH AND LONGBOTTOM, LTD.—Capital £5,000 in £1 shares; printers, stationers, lithographers, typefounders, etc. Private company. First directors: B. Longbottom, I. Balmforth and T. Lambert. Registered office: Excelsior Works, King's-court, Bingley, Yorks.

CHARLES MITCHELL, LTD.—Capital £4,000 in £1 shares; to acquire the business of a stationer, engraver, printer and lithographer now carried on by the legal personal representative of the late C. Mitchell at 4, West Harding-street, Fetter-lane, E.C. Private company. First directors: Lillian S. Mitchell, H. Mitchell and O. C. Mitchell. Registered office: 4, West Harding-street, Fetter-lane, E.C.

W. H. HORWOOD, LTD.—Capital £2,000 in £1 shares; to acquire the business of a trade printer and stationer carried on by W. H. Horwood as "W. H. Horwood" at 14, Swan-lane, E.C. Private company. First directors: W. H. Horwood and W. H. Oatley. Registered office: 14, Swan-lane, E.C.

CAXTON TRADING CO., LTD.—Capital £500 in £1 shares; printers, stationers, paper manufacturers, advertising agents, etc. Private company. First directors: T. C. Davies and C. Graham. Registered office: 29, Old Wynd, Glasgow.

DENISON BROTHERS, LTD.—Capital £500 in £1 shares; to acquire the business of printers, lithographers, stationers, account book makers, engravers and publishers now or lately carried on as "Denison Brothers" at Bradford and elsewhere. Private company. Subscribers: G. J. Withington and H. F. Plant. First directors: J. B. Upton and J. G. S. Browett.

SHELDON LEICESTER AND CO., LTD.—Capital £8,000 in £1 shares (4,000 preference and 4,000 ordinary); to adopt agreements with S. Leicester, F. H. Johnson and L. B. Holman and to carry on the business of paper mill proprietors, paper manufacturers, manufacturers of and dealers in wood and paper pulp and fibrous substances, used in the manufacture of paper pulp and paper stainers, embossers, etc. Private company. First directors: L. B. Holman, S. Leicester and F. H. Johnson.

REMINGTON KRAFT PAPER CO., LTD.—Capital £20,000 in £1 shares; paper manufacturers, dealers in paper, card and millboards, wall papers, etc. Private company. Directors: W. Lord, D. McLerie and J. S. Remington.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WILLMOTT AND SONS, LTD. (printers, etc. London).—Particulars filed of £6,000 debentures authorised December 5th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

G. WELLS AND CO., LTD. (bookbinders, manufacturing stationers, etc., London).—Debenture dated November 28th, 1922, to secure £1,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Miss O. L. Duffin, 37, Catford-hill, S.E.

R. FLETCHER, LTD. (printers, publishers, stationers, etc., London).—Particulars filed of £700 debentures authorised November 16th, 1922, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £550.

R. FLETCHER, LTD. (printers, publishers, stationers, etc.).—Satisfaction in full on November 28th of debenture dated August 9th, 1922, securing £150.

T. W. PEGG AND SONS, LTD. (printers, stationers, advertising contractors, etc.).—Satisfaction in full on October 21st, 1922, of debenture dated July 21st, 1913, securing £300.

W. WHITTAKER, LTD. (wholesale stationers and paper bag manufacturers, etc.).—First mortgage on 3-9, Upper Brook-street, Chorlton-on-Medlock, Manchester, dated November 21st, 1922, to secure all moneys due or to become due from company to Lancashire and Yorkshire Bank.

SIR ISAAC PITMAN AND SONS, LTD.—Satisfaction in full on July 1st, 1919, of debentures July 4th, 1898, January, March, June and December, 1899, and July, 1919, securing £17,500. Notice filed December 5th, 1922.

BANKRUPTCIES, etc.

DAVIES, LAZARUS AND CO., LTD. Cardboard Box Manufacturers, 261, Cambridge-road, E.—The report of Mr. J. Barwick Thompson, official receiver and liquidator of this company has been issued to the creditors and shareholders. The winding up order was made last April upon the petition of a creditor, and accounts have been lodged showing liabilities £22,514, against assets valued at £4,674, and a total deficiency of £17,840 with regard to contributories. The company was promoted by Mr. David Dombrowski in December, 1921, with a capital of £10,000, to acquire that gentleman's business of a cardboard box manufacturer, carried on at the above address under the style of Davies, Lazarus and Co., and generally to carry on business as printers, etc. The purchase price was fixed at £19,704, to be satisfied as to £3,000 in fully paid shares of the company, and £16,704 by the latter taking over, paying, and discharging and indemnifying the vendor against all debts and liabilities of the business. Debentures for £2,000 were issued in February, 1922, and in the following month a receiver was appointed, who entered into a provisional contract to sell the business and assets (except book debts) for £2,000. A receiving order in bankruptcy has been made against the vendor, and the trustee thereunder refusing to concur in the sale, the contract has been rescinded, and the business has now been closed. The trustee has further intimated his intention to institute proceedings to set aside the conveyance of the business and assets by the vendor to the company, and the receiver has had notice not to part with the assets. The failure of the company is attributed by Mr. Dombrowski, who also acted as managing director, to the fact that it was unable to obtain capital. Other causes advanced are heavy overhead charges and inefficient management.

Re SIGURD ARNE SKRENDER, paper merchant, 20, Queenhithe, E.C.—A sitting of the London Bankruptcy Court was held on December 12th before Mr. Registrar Mellor for the public examination of this debtor, who failed last September with total liabilities £84,237 (unsecured £59,474) and no assets whatever. The facts of the case were reported in our issue of October 26th last.

Witness attributed his insolvency to loss in trading during the latter six months of 1920, lack of free capital, and the failure of the British-American Continental Bank, Ltd., and absence of banking facilities for three months prior to its failure; to depreciation in the value of stock, and to liability in respect of calls on shares in the before-mentioned bank.

The examination was concluded.

The state of your mind can influence the mind of your "prospect."

Treasury Note Printing.

De La Rue v. Waterlow and Sons.

In the King's Bench Division on Friday, before Mr. Justice Rowlatt, Messrs. Thos. de la Rue and Co., Ltd., of Bunhill-row, E.C., sued the defendants, Waterlow and Sons, Ltd., of Great Winchester-street, claiming a declaration that under an agreement of March 29th, 1917, they were entitled to be paid by the defendants 1s. 6d. per 1,000 on all currency notes made by the defendants under orders obtained by them; also on account of all notes made by the defendants under orders obtained by the defendants since that date. Defendants denied liability.

Sir Leslie Scott, K.C., M.P., for the plaintiffs, stated that this was a claim as to liability and account, but the court would have to deal with the question of liability only. Both parties were manufacturing stationers and printers, and they had been in the habit for many years of manufacturing bank notes, currency notes, postage stamps and such like for various governments, including the British Government.

These contracts were not as common as, no doubt, the manufacturers would like, but when they did come, having regard to the character of the work and the comparatively limited number of such contracts and consequently the limited number of persons manufacturing under contracts, the price paid was a good one. At the end of 1914 orders were placed with the plaintiff company for currency notes and they had the whole of the orders from the Government for £1 notes and a quantity of 10s. notes. They were to be printed by the plaintiffs under a method of printing currency notes known as surface or typographical methods. The notes in question under the contracts of 1915 were being printed by the plaintiffs by the surface process; the defendants having at that time, and previously and since, had machinery for the plate process. The first and second issues of currency notes were, he (counsel) understood, by the surface or typographic process. In the meantime there was another company doing this work with a name partly identical with that of the defendants, but quite separate, Messrs. Waterlow Bros. and Layton, Ltd. That company had obtained orders from the Government for printing currency notes of the third issue by photogravure process. On March 29th, 1920, an agreement was entered into between the plaintiffs and defendants which counsel pointed out referred to "all contracts now or hereafter obtained by either party for the manufacture of all Government currency notes issued in Great Britain or Ireland." There was also a provision that Waterlow and Sons, Ltd., should pay to De la Rue and Co. 1s. 6d. per 1,000 notes manufactured by them. The result of that agreement was that both parties were, of course, to compete; but if the whole of an issue was placed with the two parties respectively then they were satisfied and did not trouble about working out an adjustment of profits so long as the whole was placed with them. If, however, one or the other of these two parties got a contract from the Government, then there was to be a sharing of the profits according to the specified rates. Of course, De la Rue being in the field with their current contracts had the advantage commercially and had a likelihood of getting further orders. But the agreement was to apply to the present or future and that was the whole agreement. In April, 1920, defendants acquired the business of Waterlow Bros. and Layton, Ltd., with the full benefits of all contracts and agreements as on and after October 1st, 1919. Plaintiffs said Waterlow and Sons had obtained large orders for which no account had been rendered and it was in respect of that the action was brought.

His Lordship: What is the point for dispute?

Mr. R. A. Wright (for defendants) said the first and primary point was that photogravure was excluded. That was what he submitted was the true construction of the agreement, and that was the essence of the whole matter. In addition to that there was a question of cancellation which he would have to deal with.

Evidence was called and the hearing adjourned.

On Monday his Lordship reserved judgment.

Re Ludgate Limited.

SIR,—We notice that on page 430 of your issue of December 14th you have, under bankruptcy, the position of Ludgate Limited. Will you kindly allow us to point out that we, Messrs. G. Duncan and Son, Ltd., wholesale manufacturing stationers, 190, High-street, Edinburgh, purchased from the liquidator of Ludgate Limited as from June 1st, 1922, the Edinburgh factory and branch of the business lately carried on by Ludgate Limited. The purchase included all the plant and machinery, the whole of the Edinburgh stock, furniture, and office fittings, patent rights in the Ludgate and other makes of loose-leaf ledgers and books, with right to use all registered names and trade marks, also the goodwill of the Edinburgh business. We are now carrying on this business under the name of The Ludgate Company, at the same address, 76, Hanover-street, Edinburgh, and are not in any way affected by the proceedings before the Board of Trade with reference to Ludgate Limited, which were reported in your issue referred to.

We shall esteem it a favour if you will kindly insert, in your next issue, the foregoing, as we feel that the statement is harmful to us, being the successors of Messrs. Ludgate Limited.

Thanking you in anticipation.

Yours, etc.,

G. DUNCAN AND SON, LTD.

W. DICKSON

(Managing Director.)

190, High-street, Edinburgh,
December 15th, 1922.

Mr. A. C. Wilkie.

THE death occurred on Thursday, December 14th, at his residence at Gosforth, of Mr. Alexander Cox Wilkie, chairman and managing director of the well-known house of R. Robinson and Co., Ltd., wholesale stationers, Newcastle-on-Tyne. Prior to joining the firm of Messrs. R. Robinson and Co., Mr. Wilkie was very well known in the paper trade circles of Edinburgh, Manchester and London. He went to Newcastle some 30 odd years ago, having accepted the position as buyer for the printing paper section of the firm. Soon after he was appointed assistant manager and later manager, at which time he was given a seat on the board of directors, and for the past seven years he has been chairman and managing director. The deceased gentleman took a deep interest in the manufacture of paper, particularly its technical side, and was well known in the North as a lecturer on paper-making, he having gathered up a large and valuable series of lantern slides dealing with the subject. He took no part in civic affairs, but was well known in the Church life of the North of England, having been for some years secretary for the Northumberland and Durham Congregational Union. He was an ardent temperance reformer. Mr. Wilkie was a keen bowler and a prize-winner. During the war he lost a son in France. He leaves four daughters, his wife having pre-deceased him.

We understand that the (recently reopened) Boothwood Paper Mills at Rishworth, near Halifax, are now turning out an excellent variety which includes M.F. printings, cartridges, parchments, manillas, casings, krafts, insulating and vulcanising papers. The agents are Messrs. A. H. Mason and Co., 6, Dowgate-hill, London, E.C.

MR. J. W. BARRATT, well known as buyer for one of the most important wholesale paper houses, has joined Mr. F. Sabel at 179, Upper Thames-street, E.C. He intends to develop the British side of the business, both for stock and making orders, and will assist Mr. Sabel with the specialities for which he has a considerable plant. Among the important foreign agencies held by Mr. Sabel are Baienfurt and the large Esthonian Paper Mills.

Picture Postcard and Postal Rates.

Delay re the Five-Word Restriction.

Having been allowed to see copies of recent correspondence between Sir Adolph Tuck and the new Postmaster-General, Mr. Neville Chamberlain, we learn with regret that there seems to be no immediate prospect of the new P.M.G. signalling his entry into office by making the small concession of removing the restriction upon the nature of the five words which may be sent for ½d. on a picture postcard.

Sir Adolph Tuck fitly took advantage of Mr. Neville Chamberlain's acceptance of the position of P.M.G. by writing to urge the removal of the present limitation of the five words, to phrases of courtesy or convention. Sir Adolph stated: "The whole of the picture postcard industry, computed in its various ramifications to comprise nearly 100,000 traders and workers is at one as to the injury caused to the trade by this restriction which, so far from benefiting the Post Office, actually deprives it of quite a considerable revenue. It is estimated that two or three times the number of picture postcards would be posted if the restriction were removed and the writing of any five words allowed."

A reply received early this month on behalf of Mr. Neville Chamberlain intimated that the matter was one with which the P.M.G. did not feel able to deal except in connection with a general revision of postage rates, and that when such revision was undertaken the subject would receive his consideration.

Sir Adolph Tuck has accordingly responded with a letter to Mr. Chamberlain stating:—"It is naturally a matter of regret that you do not see your way clear personally to exercise your prerogative in what is really a Departmental question with which Parliament could not and would not interfere, and that the matter may thus be hung up for a further five or six months, that is, till next Budget Day. Needless to say, the delay will cause keen disappointment to the entire picture postcard industry. We had all looked forward with confidence to your granting the concession asked for, the point having now been before the permanent staff of the Post Office for over eighteen months."

THE sole agency for England of the Stroostoffabriek "Phoenix," Veendam, Holland, well-known manufacturers of bleached straw pulp, has been placed with Mr. William C. Hamilton, of 73, Cheapside, London, E.C.2, who also holds the agency of several leading Dutch paper mills.

Printers' Managers and Overseers ASSOCIATION.

Manchester Centre's Annual Meeting.

The December meeting—the eighteenth annual general meeting—of the Manchester Centre of the P. M. and O. A. was held in the "Mitre" Hotel, Manchester, when the following were elected as officers for 1922-23: President, Mr. F. E. Robinson; vice-president, Mr. F. Scouler; trustees, Messrs. Edward McVay and J. H. Nuttall; treasurer, Mr. Jas. E. Mayo; secretary, F. J. Hughes; executive council, Messrs. J. Ball, F. Burnett, A. Gavin, E. Garrett, Chas. N. Knowles, F. E. Liddiard, W. Smith and J. Winstanley. The tylers for the year are Messrs. E. C. Balls and A. Hellewell. Messrs. Wm. Bardsley and Ernest L. Pitts, were elected to membership.

The annual report showed the membership at 87, this being an increase of three on the year.

The balance-sheet was passed after Mr. Rider, one of the auditors, had spoken favourably upon the keeping of the various books by the secretary and treasurer.

Business being over, Messrs. Hellewell and Nuttall organised a popular concert, the artistes being Messrs. Maynard, G. Handby, F. Ward and Miss Lewis.

Presentation to Mr. Thos. Rignall.

Just before the interval in the programme, Mr. F. E. Robinson, the new president, said he had a very pleasant duty to perform that evening; it was to do honour to a colleague whose business had taken him out of Manchester. At a later date their ex-president would probably be transferred to the Liverpool Centre, and Manchester's loss would be that Centre's gain. He hoped Mr. Rignall would find as staunch friends in the city of his adoption as he had found in Manchester during the last ten years. The past presidents of the Centre had filled the office with distinction, and Mr. Rignall had done as well as any. The office of president was no sinecure, as whoever accepted the position had to be free from bias, have a well-balanced mind, and uphold the dignity of his predecessors. Mr.

Rignall possessed all those attributes and it was through them that he gained such popularity. On behalf of the members he asked Mr. Rignall to accept a gold hunter, the inscription on the case being:

"P. M. and O. A. Manchester Centre. Presented to Thomas Rignall, president, 1921 and 1922, in recognition of services rendered."

He hoped Mr. Rignall would long be spared with good health, and whenever he looked at the watch it would be a reminder of the friends he had in Manchester.

Mr. Edward McVay, a past president, added that it was a pleasure to see recognition for honest labour done.

Mr. J. H. Nuttall, another past president, said Mr. Rignall had filled the office in a most efficient manner, and the members could not let him go without giving him something to remember the friends with whom he had spent many joyful hours. The Manchester members were a happy family who created the social spirit, and, whatever they undertook to carry out, it was done "on the square." He wished Mr. and Mrs. Rignall many happy days together.

Mr. F. Scouler, vice-president, remarked that the recipient of the watch and himself were colleagues in Liverpool many years ago, and his leaving Manchester for business purposes gave him an opportunity for receiving greater honours. All presidents endeavoured faithfully to carry out their duties, and Mr. Rignall had not failed in his effort.

Mr. F. Burnett, also an ex-president, was in attendance to see his friend honoured.

Mr. Rignall, replying, said that printers' managers were accustomed to shocks, but that night he had received the greatest shock of his life, the presentation having been such a complete surprise that words almost failed him. During his ten years' connection with the Manchester Centre nothing had pleased him more than to see its steady progress and growing popularity, and any little contribution he had made in the way of service had been given cheerfully and without thought of reward. The members could rest assured that the handsome souvenir presented to him that evening would be treasured as long as he lived and be a reminder always of happy memories of the Manchester Centre. From the bottom of his heart he thanked all the members.

WEE MAC.

A Pretty Charity Sports Wedding.

On Saturday last one of the prettiest weddings in the history of the Printing and Allied Trades Charity Sports Association took place, when Mr. Chas. Anderson and Miss Doris Farrance were married at St. Paul's Church, Canonbury. An unusually large number of persons were assembling in the centre of the church, whilst the three cars were bringing the wedding party from the bride's house in Canonbury Park North. The bridesmaids looked charming as they walked into church, and the bride, dressed most daintily in white, seemed prettier than ever, her smiling face radiating happiness on every hand. The bridegroom, smart and manly, acknowledged the presence of his many friends on his way to the altar. The service concluded with the usual wedding march preceded by the familiar matrimonial hymn finishing the marriage ceremony.

The wedding breakfast was prepared at the bride's home by the parents (Mr. and Mrs. A. Farrance), and amongst the 50 persons invited to the function were hon. general secretary and the hon. trustee of the P. and A.T.C.S.A., as delegates of their committee. Mr. H. F. Parker in speaking to one of the toasts said that it gave him peculiar pleasure to be present to wish the hon. secretary of the Boxing Section and his happy bride long life and happiness. Charles Anderson served with distinction in the army and was both gassed and wounded. He was a devoted son, and therefore would make a good husband. On the other hand Doris Farrance had taken great interest in all that her husband had been engaged in, having not only attended the various functions connected with the Association, but she had won the golden opinion of the members, as, indeed, had the chaperone, Mrs. A. Farrance, her devoted friend and mother.

The wedding gifts were too numerous to describe in detail, many of them costly as well as beautiful.

At 5.30 the newly wedded pair started on their honeymoon with the usual old shoe attached to the car. Mr. and Mrs. Chas. Anderson after breaking the journey at Folkestone are spending the remaining time in Paris.

WARNING.

The Elrod Lead and Rule Caster:

In an action brought in the United States by the Lanston Monotype Machine Company against the Pittsburg Type Founders' Company, the Circuit Court of Appeals of the Third Circuit held that the Elrod Lead and Rule Caster was an infringement of the plaintiffs' patent.

The Lanston Monotype Corporation, Limited, who is the registered proprietor of the British Letters Patent for the same invention, desires to warn the Trade that it is advised that the Elrod Machine is an infringement of its patent rights and that it intends to take steps to enforce such rights.

Eburite Paper Co. (1919), Ltd. British Imports of Paper, etc.

Meetings of Creditors and Shareholders.

A compulsory winding up order was made against this company, which carried on business at 50-6, Formosa-street and at Amberley Wharves, Paddington, last October upon the petition of Strachan and Henshaw, Ltd., engineers, Whitehall, Bristol, and on November 30th the first meetings of the creditors and shareholders were held at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C. The accounts filed under the liquidation showed unsecured creditors £20,696, preferential claims £28,636, debenture loans and interest £40,082; total £89,414. Assets: Stock in trade £6,225, machinery £8,000, cash £16, fixtures £100, leaseholds £19,000, debenture redemption policy £832, good book debts £7,314, doubtful and bad debts (£1,198) £228; total £41,715; deficiency in account with shareholders £147,720.

Mr. J. Barwick Thomson, official receiver, after reviewing the history of the undertaking, stated that on August 29th, 1922, Mr. Binnie, as receiver and manager, entered into a contract to sell the business as a going concern for £40,000. The sale included all leases, goodwill, plant, machinery, stock, book debts, cash in hand and at bank, and the benefit of all pending contracts. A deposit of £4,000 in cash was paid to the receiver, and on October 13th, 1922, the sale was sanctioned by an order of the Court. That sum of £40,000 would not be sufficient to satisfy the claims of the debenture holders.

The failure of the company was attributed by the directors to the lack of sufficient cash reserves, and consequent liability to cope with the trade depression, as there was no capital upon which to fall back. The only working capital the company had was £29,000, which it took over, but against that it took over liabilities of £36,000, and obviously that had a good deal to do with the failure.

Commenting upon the statement of affairs prepared for the purposes of the liquidation, the chairman said that with regard to the unsecured debts, £20,696, no question of dividend could arise, having regard to the fact that the debenture claims would absorb all the £40,000 obtained for the sale of the business.

Replying to a creditor, the chairman said the purchaser of the business was Mr. C. Gold, one of the directors, who, it was stated, was acting for a small syndicate. The creditor asked whether £40,000 was the best price to be obtained.

The chairman said he had received a letter from the petitioning creditors, dated November 28th, 1922, stating that they had been thoroughly into the value of the assets sold to a syndicate, of which Mr. Gold appeared to be the head, and they had no hesitation in saying that the assets were sold at approxi-

mately their value. In view of that letter, added the official receiver, it would be very difficult for anybody to challenge the sale. (Hear, hear.)

A creditor: It comes to this: Mr. Gold gets the business at the capital value of the company.

A discussion ensued regarding the E.P.D. claim, and the chairman said it was believed that no more than £1,000 or £2,000 at the outside would be recovered.

Mr. Gold said he had employed two of accountants who had examined thoroughly and had expressed the opinion that no claim existed. In any event, if anything that might be recovered were to go to him as purchaser of the business, Resolutions were passed at both meetings for the liquidation to be left in the hands of the official receiver, and it was unnecessary to elect any committee of inspection.

The Training of the Craftsman.

By J. R. RIDDELL

(Principal, The London School of Printing).

Whatever our personal views may be on training, I am sure we are all in substantial agreement that under present-day conditions due regard is not given to the selection, education and training of the boys who are to become the printers of the future. To begin with, a seven-year apprenticeship, which must be undertaken by a lad when he is fourteen years of age if he is to complete his indentures when he reaches the age of 21, is entirely out of date. This period of servitude was necessary in the days when a boy and his parents entered into an agreement for this purpose. But in those days the industry was not split up into some 22 sections as it is now. A boy was bound to a master, who agreed to teach him the art and mystery of a printer, which not only included the setting up of type and the printing of sheets on the press, but all the incidentals which are now embraced by the great printing industry—an industry which to-day can rightly claim to be the staple industry of the City of London.

I know I am on dangerous ground when I submit that a seven-year apprenticeship is obsolete, and is in need of revision in the light of present-day requirements, particularly so when the needs of the industry make it imperative that only the best type of boy, possessing a good education, should be selected. A first-class education is the printer's real stock in trade, and if our craft is to develop and progress, there must be at the outset a more careful selection of those entering the industry, and a much more efficient training to follow.

Waste in Present Methods.

The problem of the education of the printer is far from simple. I venture to say that if the principles of cost-finding were applied to the present system of apprenticeship, very few boys would prove a paying proposition to the firm which undertakes the responsibility of training them. Not many apprentices are instructed in methods which will reduce the appalling waste so rampant in most of our printing offices. I am not sure that it fully recognised that the extravagant use of material, time and energy which are daily taking place in most printing offices help to keep the industry poor.

When a boy is placed in the workshop, it is usually a very happy-go-lucky system under which he is trained. If he has spirit and push, invariably he will get on, but a lad of a retiring disposition finds it very difficult indeed to make progress, unless somebody takes an interest in him, encourages him and assists him to pick up the rudiments of his trade. There is no general agreement as to the best

method to adopt. Some large firms employ a man and pay him a shilling or two extra per week to take charge of all the apprentices in the early stages of their apprenticeship until they are passed into "ships," where they take part in the work of the office along with other men. Other apprentices glean knowledge, such as it is, from the men by whose side they work by keeping their eyes open and picking up what they can. In certain cases a boy may be directly under the supervision of the employer himself, but I am afraid this is not the general custom. Seldom is it that workmen take an interest in the lads, explaining to them the "why and the wherefore." In some cases if they did, they would be told that it was not their job to do so, and to get on with their work. It is no one's business to look after the boy. Under these conditions, it is to be wondered that there are a number of inefficient in our craft? It ought to be someone's duty to see that a boy is not retained in one section, nor kept continually on one class of work. He should be taught the whole of the work of his department of the business, stage by stage.

This is the day of specialisation, and most money is paid to the specialist, but there should not be specialisation in teaching a boy his business. The incompetent journeyman is the outcome of insufficiently trained apprentice. Employers throw the responsibility for this on to the unions, and the unions in turn throw it back on the employers. Meantime the apprentice, the craft and the nation suffer.

Selection and Training of Apprentices.

It may not be out of place to state here that in my opinion the responsibility of the selection and training of apprentices is a matter for the industry as a whole. I know I may be reminded that the question of choosing an apprentice in the past has rested entirely with the employer, but there are many things done to-day that were considered unreasonable a few years ago.

I had the honour of placing before the printing trades in London, early in 1915, a scheme for the selection and training of apprentices in which I submitted that the whole of the responsibility did not and could not lie with the employer. The practicability of the suggestion had been proved in Canada and America, where there is a periodical examination of the boy by a joint board. If the boy does not pass a test he is not allowed to go on with his training. Surely this is much better than permitting a lad to continue for a number of years in a trade for which he has no aptitude. Further, it may be of interest to know that other trades have adopted this principle, and it is particularly pleasing to state that the employers and em-

ployees in one section of our own industry, the stereotypers and electrotypers, have an agreement on similar lines.

To me the choosing of boys for apprentices requires much more care than the choosing of journeymen. It has frequently been said that you cannot get a boy to come into the printing business because the remuneration at the end of his apprenticeship is so small. In my judgment this is not the real difficulty, especially under present conditions. Given the guarantee of a proper training, most parents would not be debarred from apprenticing their boys on the ground of inadequate payment. Every industry provides opportunities for those with ambition, sound training and a good education. And our own craft—the craft which is the power behind all other businesses—provides just as great scope for those who wish to excel as any of the professions.

Recruiting for the Craft.

It is often claimed that apprentices should be recruited from the sons of those already employed in the craft. I am fully conscious of the sentiment behind this contention, but I do not think that it is in the best interests of the craft that this should be. New blood is always an advantage. Certainly it is not good either for the boy or the firm to place any boy as an apprentice in the same department or office in which his father is employed. This is one of the readiest means of placing our craft in a C3 category. Rather would I suggest that new apprentices should be sought from those who have attained a certain standard of secondary school education, plus, of course, the "gumption" which no book learning can give.

Let me repeat that a good education is the printer's chief equipment; without it, he is lost in the intricacies of this mechanical and scientific age. We want men with a high order of intelligence, who will develop vision, artistic attainments, scientific knowledge, and a real love of the master craft—men capable of directing energy into channels which will make for proficiency.

It may be of interest to mention here what the Stationers' Company is doing for the printer craftsman. From their school, which was first situated in Bolt-court in 1859, many of the boys were apprenticed to the printing business, not a few of whom became well-known master printers. They were, as it were, saturated with the spirit of "the street of printer's ink." The school outgrew its premises in Bolt-court, and in 1898 was removed to more commodious premises in Hornsey, where over 500 boys are now being educated on lines which qualify them to "make good."

The company has also compiled, or is in the course of compiling, a register in which

Summary of a lecture delivered on the 15th inst at Stationers' Hall under the auspices of the Stationers' Company and Printing Industry Technical Board.

TYPOGRAPHY

You can set *direct* from the keyboard any job on the Linotype in faces and bodies from 5-pt. to extended 36-pt.

The Linotype is built with varying magazine and distributor equipments to suit individual printers. In this way the user only pays for what he has actual use for, and can extend the equipment when necessity arises.

Over 43,500 Linotype composing machines have already been made and delivered to almost every part of the world. Thirty-six years' knowledge and experience are behind every Linotype sold to-day.

If you are in doubt concerning the best Linotype equipment for your purpose, send us samples of your work so that we can advise you accordingly.

ALL - SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

the names of pupils from the school, who have reached a certain standard of efficiency and can be recommended by the headmaster, will be "entered at Stationers' Hall." Thus printers and others associated with the Company will have a centre where they may select boys for apprenticeship with some confidence that they have been suitably prepared for their career.

There are still a large number of boys apprenticed through the Stationers' Company, and in accordance with a bequest made in 1703, each boy, when he comes before the court to be indentured, is presented by the Master with a Bible and a Prayer Book. I fear, however, until recently the Company forgot about their apprentices. There was no link between the boy and the Company, and no effort made to encourage him to make progress and ultimately to take up his freedom in the Company.

It is usual for boys in a secondary school not to leave until they reach the age of sixteen, so that the traditional seven-year apprenticeship cannot be completed when the boy reaches the age of twenty-one.

Some of our progressive unions have already recognised this difficulty, and have agreed that the last two years spent in a recognised secondary school shall count towards the seven-year apprenticeship. Those associations that have not yet adopted this view would do well to consider the matter, so that they may not lose this very promising material.

I am hopeful that arrangements may yet be made whereby those boys who wish to become apprentices in the printing trade may be transferred from a secondary school about the age of fifteen to a printing technical school for a preliminary training in craft work, at the same time continuing their purely scholastic education on lines more closely associated with the industry for which they are being prepared. Allow me to make one point quite clear. I am not at all in favour of the plan, which is sometimes adopted, of awarding scholarships to boys in a trade school for two or three years without a guarantee that they will be ultimately accepted by some printing firm as apprentices when they finish their institutional training. Every boy should be earmarked for a particular firm before or within three months of entering a trade school.

Kind of Education Required.

Instruction should be given in elementary science, but always bearing in mind the special knowledge a printer requires; with the same qualification due emphasis should always be laid on all matters connected with an art training. Above all, the boy should be encouraged in the study of citizenship so far as it applies to reading, conduct, the recognition of responsibility, his duty to himself, his employer, his fellow-workers and his country.

On the note of finance I submit that it would pay employers to send their apprentices for a whole-time course of instruction for, say, two years to a technical school before they enter the workshop. How often do we find that the first two years of a boy's life in the workshop is wasted? Seldom is it that he is given definite work to do. He is at the beck and call of everyone, with the result that he becomes dissatisfied, his enthusiasm is sapped, and, what is worse, habits, some of them vicious, which he acquires, cling to him throughout life. With the heavy cost of machinery, and the call for greater and better production, and the wages at the point at which they are to-day, it would certainly pay employers to get apprentices into their shops with some knowledge of the work they are expected to do. This preliminary and probationary training would also allow for the weeding out of those boys who are never likely to become good printers, and there is no greater tragedy than to keep a boy employed on a job for which he has no liking.

In my opinion the workshop is the proper place to train a boy, and no course of technical instruction can ever be an adequate substitute; but a workshop training is insufficient to make an efficient workman, so it must be supplemented by a specialised education. The exigencies of present-day businesses do not allow for the thorough training of a boy, no matter how good the intentions of a firm may be to fulfil their obligations. Therefore I submit the technical institute equipped and directed to meet the needs of the industry must take a larger part in the training of the printer in the future, by supplementing and not by supplanting workshop practice. The art of a craft can only finally be learned in the workshop of those who are earning their daily bread by it. I will go further and say that if

our national crafts are to develop as they should, education and training must be organised on more commonsense lines.

Tests of Efficiency.

In the training of the craftsman there should be periodical tests of the apprentice, and here again the Stationers' Company has stepped in. In co-operation with the printing trades in London, it has constituted an examining body which sets annual tests for those caring to submit themselves for examination. On the results of these examinations, diplomas, medals and prizes are awarded, and one cannot imagine a more inspiring sight than that witnessed in Stationers' Hall when it is packed with students night after night during the first week in May. Candidates seated in this grand old hall, with its setting reminiscent of the glories of the past must surely carry away memories which will inspire them throughout their future careers, and prove an incentive for still greater efforts.

It is quite within the bounds of possibility that the Stationers' Company and the Printing Industry Technical Board will yet set an examination for a master's certificate which shall testify that the holder is a master craftsman, not only in the details of the various departments of the industry, but also as having a grounding in business principles, and at the same time possessing the capacity of imparting his knowledge to those who are following in his footsteps.

It may be a little beside the mark to suggest that before a man be admitted into the ranks of a trade society he should pass a proficiency test and hold a certificate testifying to his qualifications. I am one of those who honestly believe that some guarantee of efficiency should be forthcoming when a journeyman is engaged by a firm.

The ideal education need not necessarily be elaborate; the essential thing is that it should prepare a boy for his industrial career, encourage him to use his brains readily, accurately and seriously. Let us always remember that money spent on good education is a fine investment, when it is such that it can be applied and the most made of it. It is ignorance and incompetence that are expensive.

There was a wealth of meaning in the statement made by a prominent German before the war, who, when asked what their excellent technical schools had cost, replied that the cost did not matter so long as England and the rest of the world bought the products of those who had been trained in them.

The Craft Spirit.

I believe that if there were a greater desire for development of the craft spirit, much of the cause of unsettlement in our industrial life to-day would be removed. When a man puts his soul into his work, it bears the hall mark of his efficiency. Further, the one who possesses the craft spirit finds pleasure and pride in his work. Some great thinker has said that if a good craftsman put his workshop in the midst of a forest, the world would make a beaten track to his door to buy the products which he could make better than others.

To me, the craft spirit is a noble thing, it is more precious than mere gain, it enriches both the worker and the craft with which he is associated; above all, it brings contentment and peace of mind because the true artist finds joy in his work.

Let us endeavour to inculcate more of the spirit of the early craftsmen who would not tolerate imperfect work. "Shoddy" is a modern product, and you do not find Shoddy's imprint, for example, on such buildings as Westminster Abbey, St. Paul's and this fine old Hall with its memories of the founders of English printing: William Caxton, who was connected with the Company before its incorporation, John Daye the first Liveryman and afterwards Master of the Company, Wynkyn De Worde, Hugh Singleton, John Cawood, Richard Juge, William Seres, Reynold Wolfe, Richard Tootell and others—names which stand out vividly in the records of this City at the time when the new learning with printing as its handmaiden was turning darkness into light.

There are certain people who say that the only true craftsman must produce his work by hand. As a practical printer, I give that a direct contradiction. I assert that in this mechanical age we are capable of doing better work than has ever been done before in the history of the printing craft, and the operator on the mechanical composing machine, the manager working a power

driven press, the binder at his cutting machine, can be as truly a craftsman as those who, in the fifteenth and sixteenth centuries surmounted their difficulties by patient and systematic manual labour. All credit to the early printers to whom we owe a great debt. With better instruments to work with we certainly ought to improve upon what the old craftsmen did with their primitive tools.

Modern Methods Essential.

If we are to be industrially successful as a nation, we must educate and train our youths so that the best work as well as the larger output may be obtained from the plant at their disposal. I am not forgetting the need for economy (in the right sense of that word) which applies just as much to the educational world as to industrial circles where the profits of the future must be made from what has hitherto been wasted—whether it be material, time, or the greatest leakage of all wasted labour, generally arising through lack of a proper training. Let it be remembered that the initial price paid for an article may not be its ultimate cost. Therefore education should be viewed as a business proposition and conducted as such.

Every industry is calling for efficient men from whom the best can be obtained, but efficiency and contentment will only be realised when the working conditions are such that the highest product will be secured with the least expenditure of energy, time and temper, and this position can only be reached by proper education and training, not only of the worker but also of those who hold executive positions in our industry.

Power of the Ideal.

I would impress upon the younger men to keep their minds on a high level of constructive thought. They will have to go out into the world and measure themselves against others, but in time rewards commensurate with their efforts will be theirs. Ideals raise a man's thoughts above the commonplace; without ideals no good work can ever be accomplished.

In closing let me say a word in favour of the average boy when first he comes into the printing office. He is generally eager to work; keen to express himself by the work of his hands. How is it that those characteristics seem to vanish after he has been in the office for some time? My opinion is that his enthusiasm is sapped. The youth of to-day may appear to be blasé, but underlying all this affectation of indifference there is the same old true British spirit which has served us so well in the past and which shows to the best advantage when the back is up against the wall. This tradition only wants revitalising.

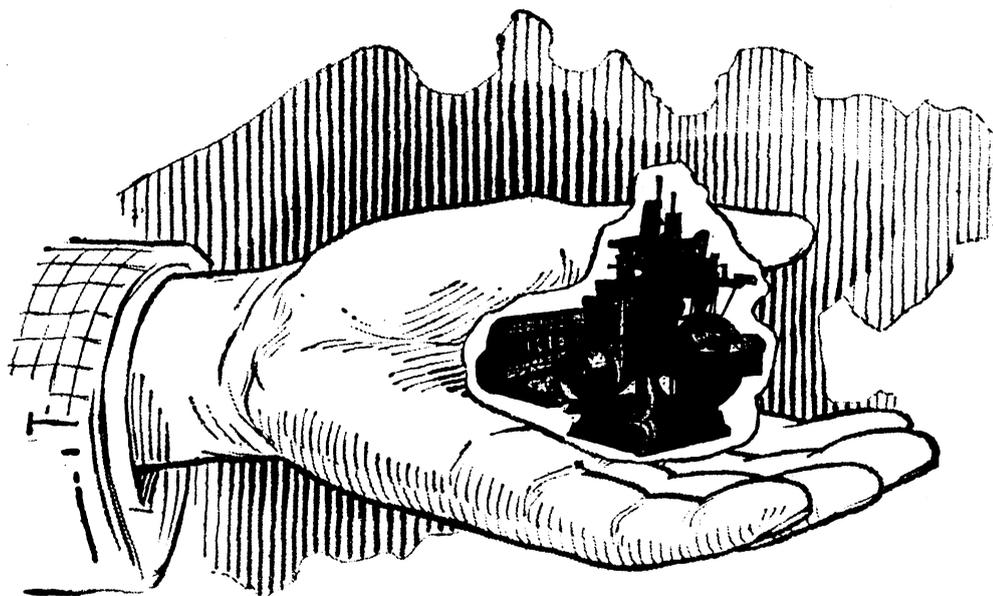

Much has recently been said regarding the status of the printing industry. I submit that any improvement can best be done by those who are making it their career. The will to do, coupled with earnest, consistent endeavour for the general good, must and will in time tell, and only by such efforts can we hope to see our glorious craft reach its rightful place in the world's industries.

To summarise what I have been trying to say, I suggest that the following points should be reviewed from a present-day standpoint.

1. The seven-year apprenticeship.
2. Methods of selection, education and training.
3. Recognition of responsibility on the part of those who have undertaken to train apprentices.
4. Institution of a conciliation board to settle questions arising out of the training of apprentices.
5. Proficiency tests.

The trouble involved in undertaking this important work ought not to be weighed against the necessity for a serious attempt to lift the printing craft to the highest level of which it is capable. Any encouragement which we can render ought to be ungrudgingly given to the young men who aim to excel as craftsmen in the craft which has educated the world.

MR. FREDERICK KAYE, the inventor of the process for incorporating rubber latex in paper manufacture, had a two-column article in *The Times* (Trade Supplement) recently describing the achievements and possibilities of his process. It states: "Many grades and qualities of latex paper are now being manufactured in many paper mills in Britain, and are quickly flowing into the trade channels. A good many mills in the United States, Canada, Holland, Belgium, France, Norway, Sweden, Finland, etc., are taking up the process with great interest."

This machine will mean more business for you

Ask any Envelope Manufacturer what he thinks of the "Leader." This Efficient, Absolutely Up-to-date Envelope Folding and Gumming Machine is one of the Greatest Modern Time and Labour Savers. It produces per minute in one operation, 150 Perfectly Made Envelopes Gummed on the Flaps, Folded and Dried. *Speed, Reliability, Economy*—these Things will Count in Production in the Good Times which are certainly ahead of us.

The "Leader" is made by a firm with 60 Years' Experience of the Manufacture of Envelope Making Machinery, so you can depend upon getting only the Best Possible Results. May we send you our prices, together with full particulars? A Post Card will bring a reply which will interest you.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A Toronto manufacturing firm connected with the stationery trade have spare space in their factory for storage or the assembly of commodities and would like to get into touch with manufacturers in the United Kingdom open to utilise their services or to appoint them as Canadian agents. (Reference: Office of High Commissioner for Canada, 19, Victoria-street, S.W.1.)

ITALY.

An agent at Turin desires to secure the representation for the whole of Italy, on a commission basis, of United Kingdom manufacturers of fine writing paper, illustrated post cards, chromolithographic and three colour prints, fine stationery, etc. (Reference No. 649.)

The "Tip Top" Platen Press.

Particulars of a new model platen press are sent us by Messrs. W. J. Light and Co., of 127, Fenchurch-street, E.C.3, who are, we understand, just putting it on the market. This machine, known as the "Tip Top" Platen, is claimed to be suitable not only for light jobbing work, but also for high class half-tone and three-colour work.

In this machine the platen is cast in one piece, so as to offer the maximum amount of resistance, and the base and vertical bed are also cast in one solid piece of exceptional strength, through which passes the main driving shaft of special steel, working in split bearings, permitting ready examination and removal if desired. The platen is hinged to the base, and the special swinging movement is designed to ensure a perfectly parallel and very powerful impression at a speed of from 1,200 to 2,000 per hour. The pressure is regulated by a handle on the left of the machine, fitted with a scale and indicator, and the impression thrown off instantly whilst running in the case of a misfeed. The inking apparatus is of improved disc type. The ink duct can be minutely regulated, and the forme rollers revolve on adjustable runners. The roller carriage has a special cogwheel drive, and is not worked by cam motion. A special attachment enables the inking rollers to be stopped whilst the machine still runs on, by a simple lever movement. The rollers then remain stationary in their highest position, and the machine can be used for light embossing, cutting, creasing, etc. Striking claims are made in respect of the light and noiseless running of the machine and its small consumption of driving power. The machine is made in a series of six sizes for chases of inside measurements from 9½ in. by 13 in. to 14½ in. by 19 in.

Don't forget until too late that the business of life is not business, but living.

Employment in Allied Trades.

Paper, Printing, etc.

According to the *Labour Gazette*, employment in the paper trade during November showed an improvement on the whole compared with the previous month; in some districts, however, the mills were still working intermittently.

In the printing trade employment remained slack on the whole; there was a slight improvement in some of the provincial towns, and electrotypers and stereotypers in London reported employment as good. Employment generally continued bad in the bookbinding trade, with a large amount of short time; there was, however, a slight improvement in London.

Statistics furnished as to unemployment in insured industries shows that in papermaking and staining, out of an estimated number of insured workpeople of 61,000, there were unemployed at November 20th 4,391, of whom 3,520 were females. The total percentage of 7.2 shows no change from the position in the previous month.

Out of 70,200 insured employees (estimated) in the manufacturing stationery trade, 4,135 were unemployed at November 20th, the total percentage of 5.9 being an increase of 0.2 as compared with October 23rd.

The estimated number of insured workpeople in printing, publishing and bookbinding was 213,150, of whom 12,985 were regarded as unemployed on November 20th. The total percentage of 6.1 marks a decline of 0.1 compared with the October figure.

Position Overseas.

Out of a reported trade union membership of 7,071 in Sweden, 50 were registered as unemployed at the end of September, which compared with 46.4 per cent. 12 months before and with 6.2 per cent. at August 31st.

In Norway, out of a reported membership of 2,560 printers at October 31st, 6.4 per cent. were returned as unemployed, whereas at the same date last year the percentage was 11.6, with a total reported membership of 2,378. The percentage unemployed among bookbinders was 7.8, compared with 13.5 last year.

Between October last year and the same month this year 73 paper mills in the United States increased their roll of employees from 22,643 to 26,493, or 17 per cent. Wages in dollars advanced from 537,754 to 648,686, or 20.6 per cent.

Paper and Print in Scotland.

Handicap of the Sample Post Rate.

Discussing the position of the paper industry in Scotland, a writer in the *Financial Times* says it is of interest to note that the Scandinavian wood pulp people are still receiving inquiries from British papermakers for early and forward deliveries, and that the increased activity in the cellulose market is still being maintained.

There is no boom in the Edinburgh printing trade, but the position is steadily improving. More book printing work is coming back to Edinburgh, and publishers appear to be regaining confidence. An important assurance has been given by the Financial Secretary to the Treasury regarding the allocation of Government printing contracts as between England and Scotland.

It is stated that while the matter is one of considerable difficulty, so far as possible the Stationery Office endeavour to give the Scottish printers a fair share of such contracts as are open to public tender. With reference to the work done at the Government printing works at Harrow, to which Scottish master printers and others have directed attention, the Financial Secretary states that next year there will be a review of the whole question of the Government printing which is done there on the expiry of the three years' experimental period for which the Harrow works are being maintained.

The present sample post rate is regarded as seriously prejudicial to the printing and manufacturing stationery industries, as the necessity of paying letter rate on any publications which include printed samples is a very severe handicap to firms desirous of gaining trade in the British Colonies as well as in the British Isles, and makes it impossible for them to compete with foreigners who have the advantage of special sample rates.

Treasury Note Printing.

Judgment in the De La Rue-Waterlow Case.

In the King's Bench Division, on Wednesday, December 20th, Mr. Justice Rowlatt gave judgment in the action brought by Messrs. Thomas de la Rue and Co., Ltd., against Messrs. Waterlow and Sons, Ltd. Plaintiffs claimed a declaration that they were entitled to be paid by the defendants 1s. 6d. per 1,000 on all currency notes made by the defendants under orders obtained by them since March 29th, 1917, and an account. Defendants denied liability.

His Lordship said this was an action brought by the plaintiffs to establish the liability of the defendants to pay them certain sums in respect of notes manufactured by the defendants for the Government. The liability was said to arise under an informal contract between the parties. The contract was made in March, 1917. Early in the war the Government had issued notes produced by typographic process. That was the first series. These then ceased. Next they had issued notes produced by the photogravure process. Of those, half of the 10s. issue were in March, 1917, being produced by one of the parties to this contract by typographical process, the remaining half of the 10s. notes and all the £1 notes were being produced by the third firm, Messrs. Waterlow Bros. and Layton by photogravure. Plaintiffs and defendants (and this was common ground), thought that it was extremely probable that the Government would cease to approve of notes being produced by photogravure, and that they would revert to engraving or typography, and in that case they hoped that one of themselves would obtain the contract. Contrary to the expectation of the parties, the Government, so far from discounting photogravure, discontinued typography to the limited extent to which they were then using it, and all the notes became shortly afterwards to be produced by photogravure. Messrs. Waterlow Bros. and Layton were absorbed by the defendants, Messrs. Waterlow and Sons, and the defendant firm on such absorption inherited the employment of Waterlow Bros. and Layton to print these notes by photogravure and they had been printing them and in respect of notes so printed, this action was brought.

The first point was this: It was said by the defendants that notes produced by photogravure were excluded from the operation of this contract. Now that argument was not founded on any single expressed word in the contract. There was no recital of any sort in this informal document referring to such a state of circumstances, and under those circumstances, he could not give effect to that argument. Everyone agreed that that anticipated abandonment of photogravure was the occasion which caused these parties to come together and make this arrangement. Now these notes had been manufactured for some time before it occurred to the plaintiffs that there was a liability on the part of the defendants. He thought it was clear that that liability was conceived in the brain of the gentleman who had come from the defendants' firm to the plaintiffs' firm. It had not occurred to Mr. Stewart de la Rue, who gave evidence, that there was this liability, and he said it had not occurred to him. Of course, relief by way of rectification could be granted by the Courts, but before a party can get rectification he must establish there was clearly without any doubt a concluded agreement to a certain effect and that by mistake, in putting those terms on paper, it had not been carried out. The rectification here claimed did not come within that principle by a very long way.

There was another point, and that was that this contract was an arrangement that was terminated by mutual consent. In support of that, there was only the evidence of the merest conversations which might quite well refer to other matters. On that evidence his Lordship could not come to the conclusion that the arrangement had been cancelled by mutual consent.

Construction of the Document.

That brought him to the construction of this singular document. The first point made by Mr. Wright (for the defendants) was that these notes were excepted. His argument was that the exception referred generically to notes which had the physical characteristics in point of design and of process of those

notes, 10s. and £1, then being issued; and that the reference to current contracts only came in as identifying the present production of notes which had these physical characteristics. There did not seem to him to be any real business reason why notes should be excluded merely because they had a design and a process. What the parties were dealing with was from the position of manufacturers, and alteration of design did not seem to be material from a business point of view. He was bound to say that Mr. Wright advanced some telling arguments; but upon the whole, he must adopt the contention of the plaintiffs, because he could not see why the notes should be excluded merely by reference to design and process. If Mr. Wright's argument was good, and the photogravure notes were excluded by exception, he must still decide whether the 10s. notes now issued as a third series were of the same design and process as notes existing at the time of the process. He could not hold the design was the same and Mr. Wright's argument failed as to the 10s. notes.

The next point was that the whole of this arrangement was void as being against public policy and it was put as being in restraint of trade unlimited in point of time. He had not got to consider as to whether it was against public policy, because he did not consider it was a restraint of trade, because both parties might compete for contracts according to the agreement and there was no stipulation that they should not both compete as before. He was of opinion that nothing could be made of that point.

Decision.

Under all the circumstances he was of opinion that he must give judgment declaring that the plaintiffs were entitled to the liability they contended for.

With regard to the account asked for of all notes manufactured by the defendants, it was decided that an Official Referee should deal with this and ascertain the amount due to plaintiffs.

As to the counter claim by the defendants for rectification, judgment was also entered for the plaintiffs on this.

A stay of execution was granted upon the usual terms.

A Correction.

Our attention is called to an error in our previous report of this case with regard to the date of the agreement. The correct date is March 29th, 1917, as given in the first part of the report, and not March 29th, 1920, as stated later in the same report. Sir William Waterlow, in his evidence, stated that he had no knowledge of the agreement until December 6th, 1921.

Sir Edmund Robbins.

ALL interested in newspaper production must regret to learn of the death of Sir Edmund Robbins, K.B.E., who passed away at Bognor on Thursday afternoon, after a long illness following a serious operation, in his 76th year. The name of Sir Edmund Robbins, as administrative head of the Press Association, will always be associated with the enormous development in the distribution of news achieved in this country during the past 50 years. For much of this development he personally deserved the credit. Altogether he spent almost 60 years in journalism, and for 47½ years was actively associated with what has been more than once described as Britain's principal news agency, while for 37 years he was its manager, retiring from that position in 1917. Mr. Robbins was secretary of the Newspaper Society for 11 years, and during the war secretary of the committee set up to deal with relations between the Government and the Press, for his services in connection with which a knighthood of the British Empire was conferred upon him. Sir Edmund was one of a well-known family of journalists, and his eldest surviving son, Mr. H. C. Robbins, fills the position of joint general manager of the Press Association. His only surviving brother is Sir Alfred Robbins, the London correspondent of the *Birmingham Post*.

The best day for doing your best is the one that comes seven times a week.

The "Freeman's Journal" Appeal.

Judge's Award.

Mr. Justice Samuels, sitting last week at the King's Inns, Dublin, gave judgment in the matter of an application for compensation for criminal injury to property, the applicants being the *Freeman's Journal* (1919), Ltd., with the Lord Mayor, Aldermen and Burgesses of Dublin respondents. Both the *Freeman's Journal* (1919), Ltd., and the Dublin Corporation appealed.

Mr. Justice Samuels assessed compensation at £47,600, which included £12,000 consequential losses. From this £47,600 he deducted £2,692, the amount paid by the Provisional Government to the *Freeman's Journal*. This meant a net award of £44,908. He gave judgment for this sum against the Corporation and other Councils. He allowed the *Freeman's Journal* and the Corporation each £400 for costs and £250 for witnesses expenses arising out of the appeal, and directed that the Corporation should pay £650 to the *Freeman's Journal* Co. in addition to the £44,908 and the costs awarded by the Recorder.

Under the heading of "Damage to Plant and Machinery" Mr. Justice Samuels referred in detail to the different items which made up the *Freeman's Journal* Co.'s claims. In regard to 14 linotype machines he allowed £400 each in the case of six; £350 each in the case of two; and £800 each in the case of six. Making a total of £7,900, from which he deducted £378, so that he made the net figure allowed £7,520. He allowed £1,150 in respect of type; £1,250 in respect of the Junior Autoplate equipment; and £10,500 in respect of the three Hoe machines. Other items in respect of machinery, etc., added to these, made a total of £22,410. For items under the head of stock he allowed £720; for the Creed installation, £542; for furniture (admitted), £744; for electrical fittings (admitted), £550; reconstruction, painting, etc., £1,110; for extra wages, repairs, etc., £3,424; and for Roneo-type issue, £1,600. Mr. Lardner had said Mr. Justice Samuels, stated in his colloquial, convincing and argumentative manner, that the Roneo-type issue was a stunt. If he (Mr. Justice Samuels) had come to the opinion that it was a stunt, he might not allow it. On the other hand, Mr. Conner, in his very able argument, pressed very strongly upon him that it was an essential part of the obligations of the *Freeman's Journal*, if it was to continue to exist at all. In his (Mr. Justice Samuels') opinion, that was the correct view. He thought that if the *Freeman's Journal* had surrendered to this intimidation, the resulting losses would have been very much greater from a business point of view.

Under the heading "Loss from expenditure in the wages of the staffs pending re-issue," £4,500 was allowed in respect of wages and salaries of the staff. The whole staff had to be kept on during the 3½ weeks. The gentlemen who formed the editorial and managerial staff of a great journal could not be picked up. Mr. Justice Samuels paid this tribute to the *Freeman's Journal* staff, that under the most enormous difficulties, in the middle of ruin and desolation and smoke-begrimmed premises, in the stench of fire and petrol, they had carried on, and working morning noon, and night, they reconstituted this journal and enabled it to issue again after a period of 3½ weeks. He thought it was a great achievement; and he thought the whole staff—managerial, and printing, down to the "printer's devil," were deserving of great credit.

PAPER imports into Japan from Great Britain during the first eight months of this year show an increase in value of 1,140,000 yen compared with the corresponding eight months of last year.

GERMAN BOOKS AS REPARATIONS.—An agreement has been signed by representatives of Germany and Italy (and only awaits the approval of the Reparations Commission to become effective) whereby the German Government undertakes to furnish books and scientific publications to the Italian State to the value of 4,000,000 gold marks. According to the *Daily Chronicle*, the bargain means that the German Government will have to carry through the biggest piece of book-buying on record, for several hundreds of thousands of books, periodicals and documents must be procured.

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By Jas. Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

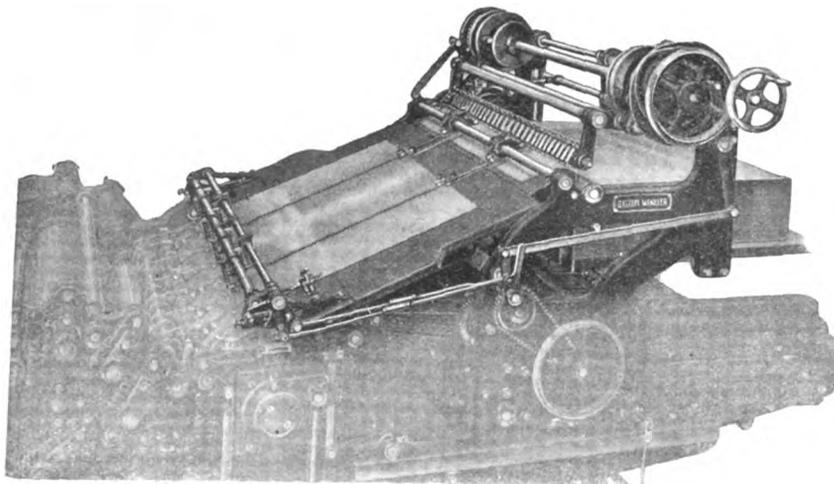

THE WORLD'S Paper Trade Review
 IS PUBLISHED EVERY FRIDAY AT
58, Shoe Lane, London.

The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer, The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letterpress or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.
Keeps up with the speed of the fastest running machine.

- Feeds all kinds of paper from thinnest tissue to cardboard.
- Register is assured even at maximum speed.
- The only Feeder adaptable for very short runs.
- Quick changing from small to large sizes and vice versa.
- Changing to hand feed in a few minutes.
- Purely mechanical Automatic Throw-off** when the paper feed is disturbed.
- No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.
- The Winkler Feeder is also built with a Stacking Arrangement.

THURSDAY, DECEMBER 28, 1922.

The Dying Year.

"THE year is dying—let him die!" He dies not greatly regretted, so far as the printing trade is concerned, for 1922 disappointed many hopes and brought to many printers much less in the way of "better times" than had been anticipated. Yet in this the last week of a year that is swiftly running to its close, one may well find cause for gratitude in that things have not been worse. The year has at any rate marked a definite start upwards out of the slough of general trade depression which lasted so long and which affected the printing trade so severely. It is with very sound grounds for optimism that we can now look forward to improving trade, and it was 1922 that made those grounds secure. So we may well say farewell to the dying year without recrimination, seeing that to some extent at least he has earned our thanks. Then we look forward to welcome his successor, 1923, with strong hopes that he has greater things in store, and that the New Year bells will ring in a period of healthier trading, more plentiful orders, decreasing unemployment—in a word, better times for all.

The Cost of Printing.

A VITAL factor contributing to the bad trading conditions of 1922 has been the high standard of all the costs that go to make the printer's list of expenses, a notable item being that of wages. The year has brought slight decreases of the wages bill, and a further small reduction is due in January, though these all told do not make possible any very considerable reduction of price to the customer. In regard to this, the London Master Printers' Association notifies its members that whilst it has been possible to reduce wages in some of the many departments through which a printing order must pass, in others reclassification and regrading of workers has resulted in very slight reductions only, the letterpress machining department showing a reduction

less than in other departments. The Federation Costing Committee has explored the position, and after taking into account the present reduction along with that which is to come into effect in January of next year, is of the opinion that not more than a 3½ per cent. reduction will be realised. This reduction, it is emphasised, applies only to manufacturing costs. Paper, ink, and binding materials are affected by market fluctuations, and have shown a tendency to harden in price. It should be obvious to printer and customer alike that as wage-reduction affects labour only, not materials, anything like the 3½ per cent. price-reduction can be reckoned upon only in respect of jobs in which the cost of materials is comparatively large and the cost of labour comparatively small.

Healthier Paper Industry.

REPORTS from the various parts of the country indicate that the papermaking industry is in a vastly improved position as compared with conditions twelve months ago. English mills may have been slower to recuperate than Scottish mills; but there is definite evidence that their order books are now in a much healthier state. It is to be assumed that in comparisons of this kind as between English and Scottish mills, the type of mill referred to is that which in England uses wood pulp mainly and produces E.S. printings and writings, while its Scottish contemporary employs esparto in the manufacture of similar grades of paper. The British preference for esparto papers is a characteristic of the trade, and may account for the earlier revival of the Northern mills.

"News" and Kraft.

THE news-print market continues fairly strong. Competition from producing sources, however, makes the direction of business very difficult, while the variability of the exchanges also introduces complications. There has been a stiffening of the price in Scandinavia, induced by American demand, and the willingness to pay the price. Orders from that quarter are stimulating markets in several directions. Kraft is one of the other lines for which good business is booked in the United States, where a price of £28 compares with about £26 over here. In the matter of freight charges the American business has an advantage, the longer distance having a rate lower by five shillings.

America's Appetite.

THE paper industry has been watching with much interest the demand which the United States has been making upon the pulp and paper products of Scandinavia. This is part of the voracious appetite which America is exhibiting in respect of many goods. Sir Edward M. Edgar, the well-known industrialist and financier, has been giving a word of warning in this regard. In all the years he has known America he has never been so struck as during the past two months by her prodigality. Her 115 million people are "feverishly tearing from the earth its irreplaceable wealth and using it to maintain a rate of growth utterly without precedent in all human history. It is this terrible consuming power of America that is by all odds the biggest economic fact in the world of today. It is terrible because already it is out-running production. Before long, while the demand will be as voracious as ever, the supply will have run short. Then there will be a smash." Sir Edward advises Britons to sit tight on what they have. He says: "The best policy for Great Britain in the circumstances is to develop and keep under British control as many physical assets as possible all over the world. If we do that America will have to come to us for some of the indispensables of life and industry."

LORD RIDDELL and Sir William Sutherland are among those who are later to join the party with which Mr. Lloyd George set off just before Christmas to visit Algeciras, in the south of Spain.

ON the occasion of his visit to Cardiff on Wednesday of last week, for the purpose of distributing prizes to the students of the Technical College, Viscount Burnham was the guest at the weekly luncheon of the Cardiff Rotary Club, and among those present were Sir William Davies, editor of the *Western Mail*, and Mr. H. Read, editor of the *South Wales Daily News*.

MR. THOMAS GREENE, F.J.I., secretary of the North-Eastern District of the Institute of Journalists, has received a letter from Lord Burnham congratulating him on the result of the "fine effort in the North-East District," whereby over £300 was raised for the Orphan Fund, and marking his appreciation of Mr. Greene's untiring efforts in connection with the banquet in Newcastle.

MR. C. A. MCCURDY, K.C., M.P., has resigned office as Chief Whip of the National Liberal Party on his appointment as chairman of United Newspapers (1918), Ltd., proprietors of the *Daily Chronicle* and *Lloyd's News*. Mr. McCurdy, it will be remembered, accepted the chairmanship on the resignation of Lord Dalziel. Sir Charles Sykes and Sir James Currie have also retired from the board of directors.

MR. R. A. AUSTEN-LEIGH, president of the Federation of Master Printers, left for Amsterdam, on December 18th, to attend a conference of the Dutch Master Printers' Association.

MR. RODOLPHE LEMIEUX, Speaker of the Canadian House of Commons, who is paying a visit to London, rendered great service to the Empire before the war by establishing cheap rates of postage, which enabled British papers and periodicals to be freely sent to the Dominion.

MR. J. E. THORNTON, whose resignation of his position as general manager of the *Yorkshire Post* and allied papers, takes effect at the end of the year, completed 50 years' service with the Yorkshire Conservative Newspaper Co., Ltd., in October last. He was previously manager of the *Yorkshire Evening Post* from its inception, and succeeded the late Mr. T. C. Sumner as general manager of the whole of the company's series of papers in 1904.

THE successor to Mr. Thornton will be Mr. Arthur E. Grime, who is at present editor of the *Yorkshire Evening Post*, a position he has held since 1911 when the late Mr. Alfred Turner left to take up the position of assistant editor of the *London Evening News*.

MR. J. NEVILLE, the chief cashier of the *Yorkshire Post* has also announced his intention to retire after 53 years' service.

MR. H. HACKETT has completed 45 years' association with the *Leicester Mercury*, of which newspaper he has for many years been editor. He has been the recipient of many congratulations on his long and honourable journalistic services.

MR. G. R. HALL CAINE, M.P., has broken down in health, and has been ordered to the South of France.

MR. W. MONKHOUSE, president of the Drawing Office Materials Manufacturers' and Dealers' Association, was last week given a complimentary lunch and presented with a handsome gift in celebration of his 50th birthday.

MR. A. H. MILLS has resigned the position of manager at the Limehouse Paper Board Mills after 10 years service, and has been appointed manager at the Colthrop Board and Paper Mills, Thatcham, Berks. He takes up his new duties early in the New Year.

PENROSE'S ANNUAL. "THE PROCESS YEAR BOOK AND REVIEW OF THE GRAPHIC ARTS," edited by William Gamble. London: Percy Lund, Humphries and Co., Ltd., Amen-corner, E.C.4. Price 8s. net.

This is the twenty-fifth annual issue of this important volume, and in its get up and production it upholds the tradition of previous issues in giving the process worker and printer the very latest information on the methods and organisation of the various processes of illustration and reproduction. The "Annual" has been issued under the editorship of Mr. William Gamble during the whole course of its existence, and his thorough knowledge of the subjects dealt with are a guarantee of the excellence of the information and of its being accurate and up-to-date. The book begins with an exhaustive review of the progress in photo-mechanical reproduction during the past twelve months, and it is interesting to note that Mr. Gamble is of the opinion that "the process block has passed its prime, and that there will be a slow but steady diminution in its employment." Other illustrative methods such as rotary photogravure and offset lithography are taking the position once occupied by the half-tone block, and for fine colour work collotype is again reviving. Mr. Gamble gives a resumé of the position of the various photographic processes that are now being developed with a view to the supersession of type composition in the production of printed matter, and deals with the work in this direction of Mr. Arthur Dutton, Messrs. Robertson, Brown and Orrell, and the "Manul" method by which last-named process reprints from books already in existence are now being actually made without the necessity for re-setting the type. He also deals with the process of Mr. Christensen by means of which reproductions of books, prints, drawing, etc., may be rapidly and easily made by a photographic process that presents many advantages over existing methods. Rotary photogravure and offset printing processes are discussed and their relative merits explained, and as much of the work of the future will be done by these processes, printers will be interested in Mr. Gamble's practical remarks on their possibilities. The articles that form the bulk of the volume are written by practical men for practical men and deal with many phases of the reproductive art. Mr. W. T. Wilkinson writes on Collodion Dry Plates; Mr. R. B. Fishenden on Collotype with a Screen Grain; Mr. Ernst Brinkmann on Multicolour Intaglio; Mr. Joseph Goodman on New Automatic Chromo Photo-Lithography; Mr. Gamble on A Process of Photography without Type; Mr. T. Thom Baker on Testing of Modern Colour Sensitive Plates; while Mr. Chas. T. Jacobi discourses on the work of the Private Presses. Other articles deal with practical subjects with which the various authors are conversant, and the whole forms a compendium of the greatest use to all who are interested in the printing art in its varying phases. The "Penrose Annual" has always been noted for the high quality of its illustrations, and this issue is quite up to the standard in presenting examples of the latest pictorial work in line and half-tone, wood engraving, photo-litho, offset, photogravure and proprietary processes such as Penrose velogravure, Bemrose's Derby prints, Rembrandt intaglio, vedragravure, etc. Specially noticeable in the colour work is the portrait of a lady, in Derby tint, by Messrs. Bemrose and Sons, Ltd., and other examples are:—"Fine Feathers," by Messrs. Johnson, Wykes and Paine, Ltd., Leicester; "A Street in Granada," from blocks by the Strand Engraving Co., Ltd.; "The Blue Vase," from blocks by Messrs. John Swain and Son, Ltd.; a portrait by the three-colour process, printed by Messrs. W. and G. Baird, of Belfast; and a figure study, in colours, by Messrs. McCaw, Stevenson and Orr, Ltd., of the same city. Printers will be greatly interested in the examples of the "Photoline" process (the Dutton process above referred to), especially those which show the combination of lettering and ornamentation; one specimen being made up from a piece of lace and pieces of jewellery, by a "step and repeat" process. These examples show some of the possibilities of the new method of photographic printing without the aid of metal types, and may cause the letterpress printer to "think furiously" as to

what the outcome may be. Another example shows how, after a line of letters has been once got on the negative it may be enlarged or reduced to practically any "body," at will. That shown here is of twelve different sizes, from about brevier face upwards. There is also a specimen of tabular matter, and of solid text to illustrate how the "Photoline" process will deal with composing for newspapers, and there is a title page in which text and display matter, ornamental borders and rules, have been composed by the photographic method, and without the use of types. If in the earlier stages of the invention such examples as these are possible who can foretell what the perfected invention may enable printers to do? It is quite within the bounds of possibility that the composing machine and the typesetting machine may eventually find their way to the scrap heap. If only for the information it contains concerning these new photographic methods of producing printed matter the "Annual" should be in the hands of every printer who is interested in the future of his craft. A feature of the book is that the name of the makers of the paper on which many of the art specimens are printed is given, and this may serve to guide the printer to the source of supply when doing similar work, and in many cases the name of the manufacturer of the printing inks used is also given. We can thoroughly recommend "Penrose's Annual" to our readers as an up-to-date and useful practical handbook to the various branches of illustrative printing.

PHILLIPS' PAPER TRADE DIRECTORY OF THE WORLD, 1923. London: S. C. Phillips and Co. Pp. 970, 8vo. Price 21s.

This is a comprehensive volume giving reference to all the paper and pulp mills of the world, with a special section under the United Kingdom for the allied trades. It has been carefully revised, a task of no little difficulty in these days of change. The British section alone runs to nearly 300 pages, and comprises not only paper mills in alphabetical, geographical and numerical order, but board mills, boxmakers and paper bag makers. Other branches of the paper trade are also included, such as stainers, enamellers, embossers and manufacturers of the varied paper and board articles which now occupy such a large part in the everyday life of the people. Further, several pages are devoted to a complete list of paper buyers, merchants and wholesale stationers; British agents and mill representatives; and pulp agents and representatives. This British section alone is valuable, embracing as it does 27 sub-sections. In addition there is the directory to the pulp and paper mills of the rest of the world, the colonial and foreign sections having been greatly amplified. The revised British Paper Trade Customs are an important feature of the volume, while those of America, France and Scandinavia are also given. At the end of the book we have a list of watermarks and trade names, additions having been made to render it one of the most complete in existence. For the amount of information the work contains, it is presented in handy form and size, reference being easy.

THE "Print Collector's Quarterly" for December has its usual abundance of reproductions of prints, together with interesting reading matter accompanying. The articles include "Notes on Toulouse-Lautrec and his Lithographs," by Arthur Symons, and "Concerning the Woodcuts of Gordon Craig," by Haldane Macfall. We are informed that for 1923 the subscription price of the "Quarterly" has been reduced from £1 to 17s. 6d.

Payment for Holidays.

The *Labour Gazette* sets out a list of the industries which are paying for holidays, and specifies the period of qualifying service required. Among these are the following:— Making paperbag and paper box, and printing ink, one week (qualifying period six months); printing, bookbinding, etc. (except newspapers, London), envelope and manufacturing stationery, one week (12 months' qualifying period); process engravers, nine days (12 months' qualifying period); typefounders (London), 12 days, public holidays included; electrotypers and stereotypers, both in newspaper offices and trade houses (London), two weeks, but in the former case the qualifying period is six months and in the latter twelve months.

Trade Notes.

DUKE OF YORK AND PRINTERS.—At an entertainment given on Saturday afternoon at the Printers' Almshouse, Wood Green, a letter was read from the Duke of York, in which his Royal Highness said that as he took the chair at the last festival of the charity he was much interested in all that appertained to the institution, and expressed to the old people His heartiest wishes for a happy Christmas and a bright New Year. The donors of the gifts distributed among the inmates included the Lord Mayor and Sheriffs of London, Lord Marshall, Sir Charles Wakefield, Mr. E. C. Grenfell, M.P., Sir Vansittart Bowater, Sir Rowland Blades, M.P., and Lady Vezey Strong. Mr. George Collingridge occupied the chair.

FEDERATION ANNUAL MEETINGS — 1923.—A special general meeting of the London Master Printers' Association has been summoned for Friday, December 29th, at 12 noon, at Stationers' Hall, Ludgate-hill, "To consider and, if approved, to adopt a resolution authorising a levy to meet the expenses which will necessarily be incurred by the L.M.P.A. in connection with the annual general meeting and annual cost congress of the Federation in May, 1923."

The Council of the Federation of Master Printers will meet on Tuesday, January 9th, when a heavy agenda, we understand, will be dealt with. Labour troubles are not so insistent as they have been, but a number are looming ahead, which will need very careful consideration. Matters relating to future legislation will also be considered, including postal rates, merchandise marks and rating of machinery.

J.I.C. MEETING.—The quarterly meeting of the Joint Industrial Council will be held on Wednesday, January 10th, when the reports of the various sub-committees will be presented, and will doubtless give rise to interesting discussions.

In view of the wage reductions, the L.M.P.A. directs the attention of its members to the necessity of stamping health and unemployment insurance cards of readers earning less than £250 per annum.

MR. J. W. BADDELEY headed the poll amongst the candidates elected last Thursday to the Court of Common Council on behalf of Cripplegate Without.

The annual meeting of the Stationers' Social Society has been arranged for Friday, January 5th, at Anderton's Hotel, Fleet-street, 6.30.

T.A. AND L.S.C. AMALGAMATION?—The Executive Council of the Typographical Association, after consideration of the question of the Radius Agreement with the London Society of Compositors, have passed the following resolution: "The Executive Council regret the repudiation of the Radius Agreement by the London Society of Compositors. Since this repudiation must necessarily require that their machinery should take the place of the Radius Agreement, the Executive Council are of opinion that the most feasible solution of the difficulty is definite and complete amalgamation with the London Society of Compositors, and they offer an invitation to a conference on this proposal."

In the Probate Court last Thursday a hearing was given to the action brought by Viscountess Northcliffe, widow of Viscount Northcliffe, against Mr. Arnholz, the first executor of the estate. Evidence was given as to the signing of a will by Lord Northcliffe at Mentone on March 22nd, 1919, and of four codicils, one of which was signed during his world tour. Intervention was made by Mrs. C. A. Thomas, of Brixton, who said that she desired a caveat against the will in respect of a prior claim. "There is undue influence in the matter," she declared.

IRELAND AND WAGE REDUCTION.—The Irish Master Printers' Association recently passed the following resolution: "That we give notice, dated December 8th, 1922, that the first reduction of 5s. recommended to the members of the Typographical Association by their own executive, shall take effect on the pay-day of the week ending December 30th, 1922, and that the subsequent reductions recommended by the Typographical Association Executive take effect as follows: 5s. on the last pay-day in February, 1923, and 2s. 6d. on the last pay-day in May, 1923."

THREE cases of lead poisoning in the printing industry were reported during November.

THE *Empire Exhibition News*, a four-page illustrated newspaper devoted to news of the British Empire Exhibition to be held at Wembley in 1924, appeared last week. It is to be published "every little while," perhaps monthly, and is printed by Thomas De La Rue and Co., Ltd.

AMONGST donors of the larger subscriptions to the fund for celebrating Sir Wm. Treloar's 80th birthday in January, by a gift of money for the assistance of his Cripples Hospital and College at Alton and at Hayling Island, are the following: (£100) *News of the World*, Mr. Frank Lloyd; (£52 10s.) Viscount Burnham; (£50) the proprietors of *Punch*; (£26 5s.) Sir G. Rowland Blades, Sir G. Wyatt Truscott; (£25) Sir John Ellerman; (£10 10s.) Sir John J. Baddeley, Alderman Sir William A. Waterlow; (£10) Sir George Sutton, Bart.

NEWSPAPER OFFICE RAIDED.—As the editor of the *Dundalk Democrat* (Mr. F. F. McGahon) and his two sons were leaving the office of the newspaper on Wednesday of last week, six youths, armed and masked, rushed in, and held up the McGahons, then proceeded to the machine room, where they sprinkled petrol from bottles which they carried, piled up paper under a cutting machine, set it alight, and decamped. The town fire brigade was quickly in attendance, and with the assistance of members of the *Democrat* staff the fire was extinguished before much damage was done.

WHILST at work last week at a guillotine in the warehouse of Messrs. Livingstone Bros., printers, Maxwell-street, Glasgow, Wm. Conn, a paper cutter, had both hands cut off a short distance below the wrists. He was taken in an ambulance wagon to the Royal Infirmary.

MR. ALEXANDER WESTWOOD, proprietor of an extensive printing and publishing business, and chairman of the Liberal Club at Cupar, Fifeshire, dropped dead last week when entering his office.

MR. S. S. PAWLING, head of Messrs. W. Heinemann and Co., publishers, died on Saturday.

The death has occurred at Edinburgh, of Mr. John Irving, retired stationer, a grand-nephew of the poet Burns, on Jean Armour's side. Mr. Irving, who was in his 84th year, had been in business as a stationer in the city for fifty years.

The European Office of the *Christian Science Monitor* has been moved from Amberlèy House, Norfolk-street, Strand, to 2, Adelphi-terrace.

The social circle of Messrs. Benn Brothers held an enjoyable gathering on Tuesday evening in King George's Hall, Caroline-street, Tottenham-court-road. There are three sections in this social club, devoted to the drama, music and debating, and the attraction on Tuesday was a very clever performance by the dramatic section of Noel Coward's comedy, "I'll Leave it to You." At the close of the performance there were calls for Sir Ernest Benn, who thanked the committee for their efforts. He commented on the spirit of loyalty and camaraderie which actuated the whole of the members of the staff—a spirit which united them all in their daily work, and which was so essential in journalistic and newspaper concerns. Amongst the audience were Lady Benn, Mr. and Mrs. C. E. Hughes, Mr. and Mrs. Henry Benn, Mr. H. P. Shapland and Mr. F. E. Hamer, chairman of the social circle.

We learn that St. Clements' Press, Ltd., Portugal-street, Kingsway, London, under the able management of Mr. Geo. Eaton Hart, which is credited with being the first London daily newspaper office to instal a Linotype machine, the first to instal Ludlow and Intertype display casting machines, is also the first to order Winkler Automatic Plate Casting Machines and automatic moulding and drying presses with electric heating. All these machines were ordered after fullest investigation.

THE WORLD'S CHEAPEST AND MOST EFFICIENT (FOOL PROOF) MELTING POT.
No Depreciation after TEN YEARS' Working.
Not Hundreds, but Thousands Installed.

Australian Notes.

New Company — Printery Fire—Control of Hoardings — Government Printing and Bookbinding.

(From Our Sydney Correspondent.)

A PERIODICAL printing enterprise of importance is indicated in the registration in Sydney of the *Forum Publishing Co., Ltd.*, with nominal capital of £5,000 in £1 shares. The company will take over the business and assets of the *Forum* magazine, now carried on by D. D. Braham, and may start, acquire, and print any magazine, newspapers, or other publications. First directors are D. D. Braham, W. O. Richards, and T. H. Kelly.

AN alarming fire occurred recently in the top storey of the *Lyttelton Times* office, Christchurch, in the stereotyping room of the jobbing department. What threatened to be a serious conflagration was confined to the one storey by the prompt activities of the brigade. The storey was completely gutted, and the editorial rooms, immediately below, suffered severely from water. The damage caused by the fire is estimated at £1,500, but the damage by water is impossible to estimate.

POSTER hoardings are much in the thoughts of the printing trade just now, as, owing to the right of veto now exercised by local government authorities in regard to the erection of advertisement hoardings, numbers of printers, artists, and lithographers are living in fear of unemployment.

An influential deputation, representative of both the employers and the employees in the printing and billposting industries, recently urged the Minister for Labour (Mr. Farrar) to do his utmost to facilitate the passage of the Local Government (Advertisement Hoardings) Bill, which will limit the powers of the municipalities in certain respects, and particularly in connection with the right of limiting the display of "bills." Serious possibilities were stated to be threatened to all engaged on poster work. The Minister said that, so far as the bill itself was concerned, it was the affair of his colleague, Mr. Fitzpatrick. But if unemployment was threatened by its delay in passing the Legislature, then the Department of Labour certainly had an interest in it. He knew the Bill had been read a first time, and that it had been set down for a second reading, but in view of the case set before him, he would see the Minister for Local Government and convey to him the representations of the deputation.

FURTHER outcry has continued in the daily Press with regard to the dismissals of staff from the Government Printing Office. The matter was raised in Parliament recently, and the suggestion made that, with work accumulating in the Government printing and bookbinding departments and machines standing idle for lack of labour, the dismissals had been carried out in response from outside printers who hoped to secure the work. Reply was made to the effect that the dismissals were the result purely of reorganisation of the Government printery in the interests of efficiency, and it was urged that the Government Printing Department must not be looked upon as a Government benevolent asylum, but as an industrial enterprise.

Latex Paper.

Prospects from the Merchants' Point of View.

Messrs. Lepard and Smiths, the well-known paper house, were one of the first, if not the first, among paper merchants to take an interest in paper containing rubber latex, and Mr. G. H. Storer, one of the directors, was good enough to give a representative of the *World's Paper Trade Review* some views on the subject, from the point of view of the seller.

Impressed by the possibilities of Mr. Kaye's invention, Messrs. Lepard and Smiths at once took a practical interest in it and had quantities of different grades made at their own expense. Among the papers produced with latex were a variety of writing papers, including E.S., T.S., creams, azures, bonds and banks; and also printings, cover papers and wrappings (browns, krafts and M.G.'s.).

Improving the Paper.

Asked for his opinion of latex in paper, Mr. Storer observed:

"My opinion about the introduction of latex in papers is that it certainly improves them. Mainly the improvement is in the folding properties. On the Schopper machine it is shown that one or two per cent. of furnish will increase the qualities by 50 to 100 per cent. In such papers as ledger and account book, there is a special advantage in this.

"So far as wrapping papers are concerned, I have not had much experience. Of course, latex must improve them. It should enable the papermaker to produce wrapping papers of greater strength and durability."

Question of Cost.

"And what about the cost?" asked the *Review* representative.

"Well, the cost should be no more, because latex will permit of a cheaper furnish being used. That is what is aimed at in the process. It must, of course, be a commercial proposition to be a success. We are selling our standard grades of paper made with latex at the same price as those without latex. One of the chief ways of inducing people to use

latex paper will be to produce paper of equal strength and quality at an equal or lower price. In the experiments we have made, the cost of the latex was added, because we desired to make comparative tests, and, therefore, we adopted a furnish with which we were familiar, plus the latex. Adding 8 gals. of latex to a ton of paper, and latex costing 4s. 6d. to 5s. a gallon, it means, with one per cent. of latex furnish, that the additional cost per ton of paper is £2; and the cost is proportionate according to whether you add more or less latex. But, as I say, the saving should come in being able to utilise a cheaper fibre when the paper-makers have acquired sufficient knowledge from experience.

"On the other hand, with the same fibre, latex will give higher qualities. We found, almost without exception, that the improvement in the paper with latex varied between an average of 5 to 20 per cent. in strength and 25 to 100 per cent. in folding properties. There was also an improvement in the comparative strength between the machine and the cross direction of latex papers. Moreover, a finish can be given to paper which allows printers to get a fine effect with half-tone blocks."

Mr. Storer added that certain mills had experimented with different furnishes, and as far as he understood they were satisfied with the results. Moreover, "broke" was repulped without difficulty.

News-Print.

Coming to news-print, Mr. Storer said: "British news is mostly made of a furnish of about 30 per cent. sulphite pulp. If this furnish can be reduced to 20 per cent. by the addition of latex without costing any more, and if the makers can get a paper of equal strength, but with more elasticity, so that it will not be liable to break while passing over the fast-running printing machines, it would be a great boon to the printer, and, in my opinion, that is a possibility."

Mr. Storer referred to the difficulty of making experiments on the large "news" papermaking machines, which are kept busy on long runs, but hoped soon to get some enterprising mill to make a trial parcel.

Early Defects.

With regard to the defects which were

noticed in some of the early experiments, Mr. Storer mentioned that these experiments, he believed, were confined to latex which had not been properly preserved; the importers had little knowledge of the earlier supplies that came forward, but have now overcome this initial difficulty.

Waterproofing Paper.

In the matter of waterproofing paper with latex, Mr. Storer apparently expects to find some little difficulty. Certainly latex does make paper more waterproof and impervious to moisture generally, but whether it will render paper really waterproof is doubtful. In fact, Mr. Storer realises that a point will be reached where latex products will no longer be paper. For instance, if 20 to 30 per cent. of rubber were used, then the resulting material would get beyond the paper stage, although in its manufacture papermaking fibres and papermaking machines would be used.

In this direction our informant sees no limit to the possibilities, and he hinted at the practicability of producing a linoleum substitute which would cost perhaps half the price of the present article.

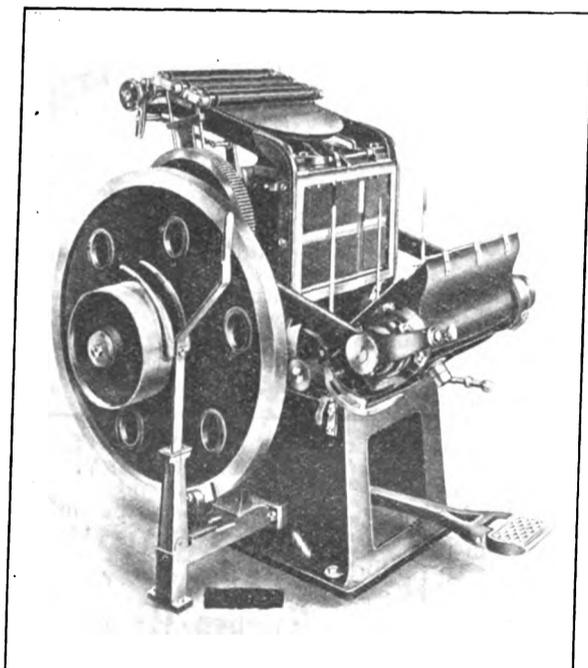

Latex Papers on the Market.

As to the prospects of merchandising paper in the market, Mr. Storer says:—

"No doubt the people at present who are demanding supplies of latex paper are those who are principally interested in the rubber industry. But there are others also who are inquiring for latex papers, and who need them for special purposes, such as loose-leaf ledger papers, cash bags for bankers, which have to undergo much handling, and papers used for particular wrapping purposes."

Licenses.

We understand that a fair number of licenses have already been issued to paper-makers for the manufacture of latex papers. While Mr. Storer believes that a market is ready for such products, he thinks it is for the papermaker to continue his experiments, and to find other uses for the resulting material. Already a fair amount of latex paper is being sold, and Messrs. Lepard and Smiths claim to possess the largest stock of these papers of any wholesale house.

The SUPERIORITY of the TIP-TOP PLATEN MACHINE

is in the
Perfect Impression and Register.

The platen and the base and vertical bed are cast in one solid piece.
Superior inking apparatus of newest type.
High speed and light and noiseless running.
Adjustable runners and **camless drive of roller carriage.**
Throw-off of inking rollers by simple lever action, whilst machine remains in motion.

It enables you to tackle anything from a hand-bill to the best class of half-tone and three-colour work.

DIVIDENDS AND REPORTS.

BURY PAPERMAKING CO., LTD.—Accounts for half-year ended November 25th show a loss on trading account of £6,725. After charging that account with interest and depreciation amounting to £4,169 there is debit balance of £10,893. To this must be added debit balance from last account of £22,734, making total debit balance of £33,627.

NEW COMPANIES.

THE PEOPLE'S PUBLISHING CO., LTD.—Capital £150,000 in £1 shares; to adopt an agreement with W. G. Morden, and to carry on the business of newspaper proprietors, printers and publishers, etc. Private company. Subscribers: B. Davies and Catherine M. Walker.

"CROYDON TIMES," LTD.—Capital £25,000, in £1 shares (10,000 7½ per cent. cum. preference and 15,000 ordinary); to take over the business carried on at 108, High-street, Croydon, as the *Croydon Times*, and to adopt an agreement with Edith B. Hatch, T. J. Hatch and H. Houlder. Private company. First directors: Edith B. Hatch and T. J. Hatch.

PARTRIDGE AND LAWRENCE, LTD.—Capital £10,000, in £1 shares (8,000 ordinary and 2,000 6 per cent. cumulative preference); printers, photographers, papermakers and merchants, cardboard manufacturers, etc. Power is taken to establish, maintain and work lines of aerial and other conveyances between Birmingham, London, Liverpool, Cardiff, Scotland, Wales and elsewhere, to run motor omnibuses of all kinds in Birmingham and elsewhere, to transport passengers and goods, and act as jobmasters, omnibus and other conveyance proprietors, manufacturers and builders, and mechanical engineers, etc. Private company. Directors: A. V. Partridge, F. S. Lawrence and F. Partridge. Registered office: 7, Mary Ann street, Birmingham.

BRITISH COMMERCIAL PRESS, LTD.—Capital £10,000, in 9,750 preferred shares of £1 each and 5,000 deferred shares of 1s. each; printers, typefounders, booksellers, stationers, advertising agents, etc. Private company. Subscribers: B. Davis and C. W. Mander.

BUTCHER, WETHERLY AND CO., LTD.—Capital £3,000, in £1 shares; papermakers, wholesale stationers, paper agents, printers, publishers, bookbinders, lithographers, shippers, importers, exporters, etc. Private company. Permanent directors: C. A. Butcher, H. W. Wetherly and W. J. Skelton. Registered office: 83-85, Cowcross-street, Smithfield, E.C.1.

ADLWS, LTD.—Capital £3,500, in £1 shares (1,500 10 per cent. cumulative preference); publishers, printers, stationers, booksellers, addressing agents, directory compilers, advertising agents, etc. Private company. Subscribers: W. J. A. Perkins and G. H. Exeter. Registered office: 154, King's Cross-road, W.C.

PUBLICITY SERVICES, LTD.—Capital £100 in £1 shares; to take over the business of an advertising specialist carried on by R. E. Southworth, A. B. Cox and L. W. Collier at 23, Bedford-street, Strand, as "Publicity." Private company. First directors: R. E. Southworth, A. B. Cox and R. W. Collier. Registered office: 23, Bedford-street, Strand, W.C.

LYDDON AND CO., LTD.—Capital £10,000 in £1 shares; manufacturers of and dealers in paper and articles made from paper or pulp, and materials used in the manufacture or treatment of paper, including cardboard, railway and other tickets, millboards and wall and ceiling papers, etc. Private company. Subscribers: H. J. Gray and C. F. Colebrook. Directors: J. J. Macdonald, L. Lemieux and J. E. Lyddon. Registered office: 110, Cannon-street, E.C.4.

EBURITE PAPER CO., LTD.—Capital £40,000 in £1 shares; to adopt an agreement with C. Gold and to carry on the business of paper-makers and merchants, manufacturers of corrugated, crinkle and wax paper, paper shavings and decorations and fancy paper goods of all kinds, etc. Private company. First directors: C. Gold, J.P., E. Allen and M. Falcon, M.P. Registered office: 56, Formosa-street, Paddington, W.9.

A. J. LYONS AND CO., LTD.—Capital £300 in £1 shares; furniture and general dealers, dealers in stationery and fancy goods, etc. Private company. Subscribers: A. J. Lyons and J. A. Cleves. Registered office: 76, Cow-bridge-road, Cardiff.

ATTRACTIVE PUBLICITY, LTD.—Capital £20,000 in £1 shares; to adopt an agreement with Major R. H. Parkinson to carry on the business of advertising agents and contractors, manufacturers of and dealers in cinematograph projectors, cameras and apparatus, etc. Private company. Directors: Major R. H. Parkinson, C. H. F. Preston, B. T. Gibson and C. H. Cooper. Registered office: Anglo House, 1, Litchfield-street, St. Martins-lane, E.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

ALPHA PRESS, LTD. (Printers, advertising agents, stationers, etc., London).—Particulars filed of £200 debentures authorised November 23rd, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

WHITE HART PRESS, LTD. (Tottenham).—Particulars filed of £300 debentures authorised November 21st, 1922, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

"SCUNTHORPE AND FRODINGHAM TIMES" Co., LTD.—Particulars filed of £2,600 debentures authorised December 2nd, 1922, and covered by trust deed of even date charged on land with premises thereon in Home-street, Scunthorpe, Lincs, and the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued. Trustee: F. Wilkinson.

L. UPCOTT, GILL AND SON, LTD.—Issue on November 16th, 1922, of £110 debentures, part of a series already registered.

W. H. DORMAN AND CO., LTD. (Manufacturers of internal combustion engines, printing machines, etc., London).—Particulars filed of £150,000 debentures authorised November 24th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, subject to prior charges, the amount of the present issue being £80,000.

BANKRUPTCIES, etc.

Re **ANGLICAN CHURCH PRESS, LTD.**, 5, Green-street, Leicester-square, W.C.—Under

the winding-up order made against this company last March accounts have been lodged showing liabilities £1,641 against assets £15, and a total deficiency of £4,624 with regard to contributories. Mr. J. Barwick Thompson, official receiver and liquidator, reports that the company was formed as a private company in July, 1920, with a nominal capital of £3,000, to carry on the business of printers, advertising agents and contractors, and to publish and sell magazines and books. The company's business consisted of publishing Church Year books, with the permission of various churches. The cost of the publications was borne by the receipts from advertisements secured from tradesmen and others in the districts in which the books were issued. The company's failure is attributed by the promoter, Mr. T. G. O'Sullivan, to the fact that it was necessary to pay large salaries and commissions for obtaining "permissions" to publish, and advertisements, which were out of proportion to the results obtained.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

F. W. Tongue and J. Griffiths, paper merchants and paper bag makers, 16, New Meeting-street, Birmingham, under the style of the Hargiff Paper and Bag Co.

J. E. A. Neary, A. H. Topple, and H. B. Ransom, manufacturers of Christmas crackers, stockings, etc., 2A, Astbury-road, Queen's-road, Peckham, London, and 220, Albert-road, Peckham, London, under the style of the All British Cracker Co., so far as regards H. B. Ransom.

Lucy Ada Rudd and John Albert Passmore, Burchatt, cardboard box manufacturers, 22, Honestone-street, Bideford, Devon.

William Malkin and John Martindale, paper bag merchants, 1, North-street, Nelson, Lancs.

BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Cecil Edgar Doubleday, 46, Bridlesmith-gate, Nottingham, printer.

Digby George Smith and Claude Albert Smith, 97, George-street, Croydon, stationers.

RECEIVING ORDER RESCINDED.

Francis Meredith Wilfrid Meynell (described in the Receiving Order as Francis Meynell), 92, Brook-green, Hammersmith, journalist, December 13th. It appears to the court that all debts of the debtor have been paid in full.

New Inventions

Rotary Attachments.

In an invention patented by Mr. R. C. Adams two or more rotary members for stencilling, printing, numbering, ruling, scoring, perforating, or other like purposes are mounted in a rotary carrier whereby any one of them may be swung into the operative position. As shown, a type or electro cylinder 9 and two drums 4, 6 carrying a stencil are mounted in a carrier 2 rotatable on an

axle 3 fixed in standards 1. In Fig. 2 the drum 9 is in the operative position in which it co-operates with a positively driven impression roller 20, but by swinging the carrier 2 through 180 degrees the stencil is adapted to co-operate with the roller 20 or with a smaller frictionally driven roller. The drums are rotated by a crank 18 provided with a splined shaft 19 engaging either the pinion 15 in mesh with equal pinions 16, 17 on the shafts of the drums 9 and 4 respectively, or the pinion 12 meshing with pinions 13, 14 on the shafts of the drums 4 and 6 and providing a 5:3 gear ratio. The usual waver rollers 11 are provided and, when the drum 9 is in use, the stencil drums 4, 6 may be used as inking drums, rollers 11a then being interposed between the drums 4, 9. The sheet feed rollers are driven from gear wheels 27, 28 and, by manipulation of an internally toothed wheel 40 in conjunction with a toothed dial 39 integral with the wheel 27, the head space may be varied. For locking the carrier 2 in position, a finger 34a, Fig. 2, at one side is turned so as to pass through coinciding slots 36 and either 37 or 38 in the standards 1 and carrier 2 respectively, and, at the other side, arms 34, Fig. 5, are turned so as to embrace the carrier 2. The type, etc., cylinder 9 may be removed from its drum by turning it so that a slot therein is coincident with a narrow part 2a, Fig. 7, of the carrier 2. A construction is also shown in which stencil drums and cylinders for printing, etc., are mounted radially in a cross-shaped carrier.

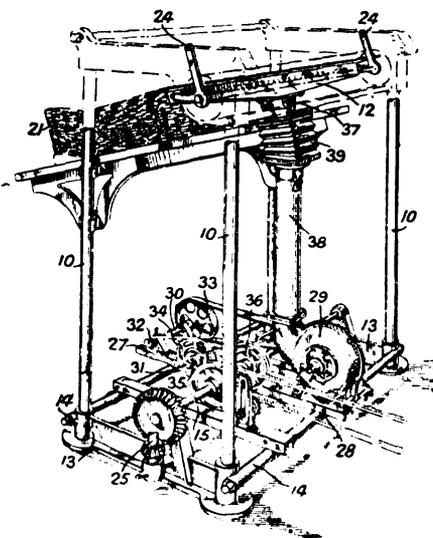

axle 3 fixed in standards 1. In Fig. 2 the drum 9 is in the operative position in which it co-operates with a positively driven impression roller 20, but by swinging the carrier 2 through 180 degrees the stencil is adapted to co-operate with the roller 20 or with a smaller frictionally driven roller. The drums are rotated by a crank 18 provided with a splined shaft 19 engaging either the pinion 15 in mesh with equal pinions 16, 17 on the shafts of the drums 9 and 4 respectively, or the pinion 12 meshing with pinions 13, 14 on the shafts of the drums 4 and 6 and providing a 5:3 gear ratio. The usual waver rollers 11 are provided and, when the drum 9 is in use, the stencil drums 4, 6 may be used as inking drums, rollers 11a then being interposed between the drums 4, 9. The sheet feed rollers are driven from gear wheels 27, 28 and, by manipulation of an internally toothed wheel 40 in conjunction with a toothed dial 39 integral with the wheel 27, the head space may be varied. The type, etc., cylinder 9 may be removed from its drum by turning it so that a slot therein is coincident with a narrow part 2a, Fig. 7, of the carrier 2. A construction is also shown in which stencil drums and cylinders for printing, etc., are mounted radially in a cross-shaped carrier.

is pivoted to a slide 11 which is normally carried with the table 10 by means of a spring pressed plunger 12 which engages a sloping surface 12a on the slide. If, however, the sheet sticks, the plunger yields and allows the table 10 to reciprocate without the slide and so prevents damage. The table 10 is formed with recesses in which engage rollers 10a, which prevent side play of the table. The table is prevented from rising vertically by a roller 9c which engages a track 20 controlled by a spring 22. The table 10 is reciprocated by an eccentric rod 6 pivoted to a depending part 9, and formed with an extension provided with a roller 7 which, as the slide returns, acts on a tail piece 15 of the pin carrier 13, and causes the carrier to move out of sheet engaging position. A spring 17 brings the pins back into the position shown to engage the bottom sheet of the pile. A portion of the roller 3 is cut away so that the rollers do not grip the sheet until it is released from the pins.

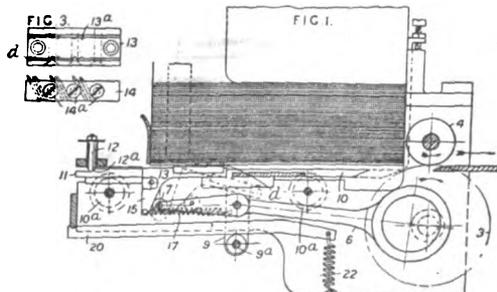

Feeding Sheets.

A sheet-feeding machine, patented by Messrs. C. Gaved and A. M. Hay, is of the kind in which a vertically oscillated air box 12 is used to direct blasts of air on the edges

Feeding Thick Sheets.

Apparatus for feeding thick sheets of paper, cardboard, etc., from the bottom of a pile, as patented by Mr. W. E. Molins, comprises a

reciprocating feed table 10 fitted with a pivoted member 13 provided with pins d which are forced into the bottom sheet and carry the same into the grip of feed rollers 3,

of a pile of sheets 21, is constructed with an air blower which is mounted with its driving gear or with a driving motor and gear on an auxiliary frame so arranged that it can be attached to an existing machine, and the out-

let from the blower connected to an existing air inlet connection for the air box. As shown, the blower 29 is formed with an outlet pipe 38 terminating just below the inlet 37 of the air box 12, which is oscillated by bell cranks 24 operated from a shaft 25 geared to the main feed driving shaft 15. The parts 37, 38 are connected by a short bellows member 39 formed of leather or fabric treated to make it air-tight. The blower 29 is mounted on an auxiliary frame formed of two channel section bars 27 connected by straps 28 to stays 14 of the main frame, which also comprises uprights 10 and side frames 13. On the auxiliary frame are two shafts 31, 30, of which the shaft 31 is driven from the shaft 15 by sprocket gears 36, 35 and the shaft 31 drives shaft 30 by sprocket gears 34, 32. The blower is driven from shaft 30 by a pulley 33 and a belt. In a modification, the auxiliary frame carries a blower and a motor, which drives same by belt and pulley gearing, the bellows 39 in this case being connected to the blower without the use of a pipe 38.

Rubber Latex Paper.

The statutory meeting of Kaye's Rubber Latex Process, Ltd., was held recently at the company's offices, 7-8, Great Winchester-street, E.C., Mr. D. F. L. Zorn (chairman of the company) presiding.

The chairman said that from the start the directors had turned their attention towards two main objects—firstly, the development of the Kaye process in the paper trade at home, and, secondly, the handling of the foreign patents.

For the first of these purposes they needed the support both of the rubber planting industry and the paper trade itself. As soon as possible after the formation of the company the directors got in touch with the Papermakers' Association, and in consultation with that body ascertained the best method of meeting the practical requirements of the trade, and settled a form of licence giving papermakers every facility for adopting the new process upon a commercial scale. This line of policy had met with every success, and the actual issue of licences to paper mills for using the Kaye process upon a commercial scale under royalty commenced more than a month ago. Latex paper was being taken up by a rapidly increasing number of mills, and the Kaye process might now be regarded as having been received in papermaking circles in an atmosphere of friendly co-operation. Difficulties had, of course, arisen, but in various mills where failure occurred in the first attempts to use the new process this proved to be due to the use of defective latex, and satisfactory results were achieved as soon as latex in proper condition was used.

Mr. Kaye had given personal assistance in introducing the process at numerous British mills, and had also lately made two trips to Continental countries for a similar purpose. The board felt from the start that it would be practically impossible to handle the Kaye process in foreign countries upon a royalty basis from London, and therefore decided upon a general policy of disposing of the various foreign patents in their respective countries for a cash payment, plus a substantial share interest in the companies to be formed abroad. Important negotiations were going on upon these lines regarding certain of the foreign patents. As soon as anything definite could be communicated full information would be given to the shareholders.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

Decimal Standard Weights.

Some of the Advantages Explained.

There is by no means unanimity on the question of the practicability of adopting standardisation in relation to paper, and even in America, where the subject has been pushed forward vigorously and ceaselessly, progress is slow.

Quite recently the National Association of Purchasing Agents passed a resolution in favour of the American Decimal Standard of Weights for all kinds of paper and paper boards "as a substitute for the present various basic ream weights, because of the economy, accuracy and general convenience arising from the use of the standard." Accordingly all paper and paper board manufacturers, brokers and dealers are requested to adopt the decimal standard.

Under the heading of "the advantage of decimal standard of weights" Mr. F. E. Stapleford read a paper before the paper conference of the National Association of Purchasing Agents at Rochester, N.Y., and his observations are interesting. Mr. Stapleford's paper is as follows:—

A Complicated System.

The general system of weights and measures in use by the English-speaking nations of the world is without doubt the most complicated known to civilisation. I refer particularly to our inch, foot rod, acre, pint, quart, gallon, ounce (both wet and dry measure), pound, ton, etc. But of all these systems of measure there is none, absolutely none, that compares in complexity, with all attending inconvenience and inaccuracy, with our American system of basic weights for paper.

The paper industry, five or six years ago adopted a system known as "Substance Numbers." This system comprehends the establishment of the weight of some particular stock size as the standard of weight for that particular class of paper. For example: in book and litho papers, 25 x 38 has been adopted as the standard or basic size and the weights in this size are made in various weights equivalent to the weight of the standard or basic size. For instance, basis 25 x 38—50 lbs. in size 28 x 42 weighs 62 lbs.; it was formerly stocked 28 x 42—60 lbs. or two pounds lighter per ream of this size, without regard to any standard.

The weakness, if not defect, of this system lies in the fact that the substance number or weight applies to one class of paper only. Book papers, writing papers, cover papers, etc., each have their special basic size and respective substance numbers as just enumerated. There are at present from twelve to fifteen classes of paper stock, more or less used by printers, with corresponding basic sizes. The "substance" number of some particular grade of paper has no relation whatever to the same identical "substance" number of another. It may indicate either a greater or lesser basic weight.

The whole present system of basic weights is extremely complicated as to the process of figuring, increases the cost of estimating and checking and greatly increases the chances of error. To find the weight of a sheet 20½ x 36 on a basis of 25 x 38—50 lbs. four distinct operations are necessary—20½ must be multiplied by 36; 25 must be multiplied by 38; the product of 20½ and 36 must be multiplied by 50;

and the result divided by the product of 25 x 38.

Paper is sold by the ream; the printer sells his converted product by the thousand count. This causes not only a constant clerical effort in translating five hundreds into thousands, but I believe there are few printers of experience who have not been embarrassed at one time or another, either by their own or their competitors' errors, in figuring half the amount of paper required.

This chaotic condition in due course brought the Pulp and Paper Division of the War Industries Board to the realisation that some simplified and otherwise efficient system of basic weights for paper was absolutely essential for the economic welfare and convenience of the paper making and associated industries. The American Decimal Standard of Weights for Paper was the outgrowth of that very urgent demand.

The Decimal Standard System was devised largely by Mr. Thos. E. Donnelley as director of the Division of Pulp and Paper, U.S. War Industries Board about five years ago.

Briefly, the D. S. System comprehends the unit of 1,000 sheets of paper or board, each sheet containing 1,000 square inches as a basis. This may be more readily visualised as 1,000 sheets size 25 x 40. The weight of such a parcel of paper is the "Decimal Standard Number."

It will be seen that the ream is entirely eliminated. Everything is figured by the thousand sheets. The D. S. N. is the "substance" number. For instance—a paper of No. 150 substance would mean that 1,000 sheets each having an area of 1,000 square inches would weigh 150 pounds. It does not make a particle of difference what the grade or quality of that paper might be.

To find the weight of a quantity of odd sized sheets you simply multiply the area of that sheet by the D. S. N. which at once by one single mathematical operation gives the weight of 1,000 sheets. This product applied to the quantity of sheets, naturally produces in terms of pounds the weight of the lot, be it fifteen sheets or fifteen carloads.

There has developed no valid criticism, except that such a system would involve the expense to the merchants of new samples and that during the transition period there might be some duplication of stocks in paper warehouses.

On the other hand the advantages are:—

1.—It avoids confusion because: (a) The system is readily explained and easily understood; (b) there is but one substance number for the same weight of stocks for all classes; (c) there would be no confusion between the substance number and the actual weight of the stock, as the substance number is a basis unit and not the weight in pounds of some stock size used as a standard.

2.—It will eliminate the necessity of reducing reams to 1,000 sheets and any errors that might result.

3.—It makes unnecessary the acquiring of technical knowledge of the various sizes by men new in the business or laymen.

4.—It eliminates all chance of misunderstanding as to weight of sheets being furnished.

5.—It is generally convenient especially in the calculation of weights of odd sizes.

6.—It is accurate to the highest degree.

A great deal has been done, more said and many well meaning resolutions passed, relative to and in support of the D. S. system. If, on the other hand, anything of a material nature has been accomplished, it has never come to my attention.

For the prime purpose of determining the nature of the reception that might be accorded the D. S. System by book paper manufacturers at first blush, I wrote to two coated paper mills and after a short explanation of the application in their lines, asked them to give serious consideration to the adoption of the D. S. System in their billings.

One mill writes as follows: "While this is a matter which has our hearty approval from the theoretical standpoint, we are actually able to do but little to initiate such a system, as our product is taken by the jobbing trade and we must cater to their wishes in the matter. Up-to-date, we have never had any expression from them which would lead us to the opinion that they were other than apathetic on the subject."

This attitude I consider representative of that of the major portion of the manufacturing industry and suggests a definite basis for action—the jobbing trade.

The other mill writes: "Your favour of the 18th inst. received relative to the Decimal Standard System, and since the receipt of it we have been going over this matter quite carefully here, and I have made various inquiries among my friends in the paper trade in this vicinity; and while possibly this is something that will be universally adopted in the near future, I do not think from my investigation during the past week or ten days, that it is so far considered, by the paper trade, at least, to be something that should be adopted by them at this time."

"In looking over our own records here we find that if we adopted this system on all shipments to our larger customers since the first of the year we would have been out quite a little item. This, of course, may be only a coincidence, but it so happened that in figuring out the D. S. Number that the fractions have nearly all been in favour of the purchaser and this leads me to ask: What is the objection to carrying this D. S. Number out to say two decimal points so as to come to a more accurate result?"

"Our folks here have figured out a great many examples based on shipments since the first of January, and they claim that there is absolutely no saving in time. Of course, this may be from lack of experience."

This letter raises a point on which I personally am not clear: Are the present established standard basis of weights, such as 25 by 38—50, 60, 70, etc., to be changed to the extent of the variation effected by the application of a D. S. N. without fraction which will come nearest to producing an equivalent substance number?

If the answer is yes, then I fear our task will be indeed arduous.

If not, then it will be necessary to carry out the D. S. N. to one if not two decimal places. To get the thing started I believe the latter course should be pursued.

For example, the D. S. N. for 25 by 38—50 lb. is given on a list recently published as 105. As a matter of fact it should be 105.25.

Likewise, the D. S. N. of 25 by 38—60 is 126.3 not 126; 25 by 38—70 is 147.35 not 147; 25 by 38—80 is 168.40 not 168; 25 by 38—90 is 189.45 not 189.

I think this phase of the application of the D. S. System should receive the consideration of a committee composed of members who are familiar with manufacturing conditions. It is important that this association put itself on record and lend its moral support to the American Decimal Standard. More than that—we must devise ways and means by active co-operation, looking to its universal adoption.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

- 1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
- 2.—It occupies a space of only six feet on the run, and is quite noiseless.
- 3.—The power required is such a small amount that it can be driven from any existing shafting.
- 4.—Centres of any kind or width can be worked on the machine.
- 5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
- 6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.
